

Perfect Oracle 1Z0-1072-25 Associate Level Exam Are Leading Materials & Useful 1Z0-1072-25: Oracle Cloud Infrastructure 2025 Architect Associate

P.S. Free 2025 Oracle 1Z0-1072-25 dumps are available on Google Drive shared by ActualTestsQuiz:
https://drive.google.com/open?id=1C6_B5F4WquXrDC-0jGjKIP7v5cAb1y7K

Our product's passing rate is 99% which means that you almost can pass the test with no doubts. The reasons why our 1Z0-1072-25 Test Guide' passing rate is so high are varied. Firstly, our test bank includes two forms and they are the PDF test questions which are selected by the senior lecturer, published authors and professional experts and the practice test software which can test your mastery degree of our Oracle Cloud Infrastructure 2025 Architect Associate study question at any time. The two forms cover the syllabus of the entire test. Our questions and answers include all the questions which may appear in the exam and all the approaches to answer the questions. So we provide the strong backing to help clients to help them pass the test.

ActualTestsQuiz's Oracle exam practice test content is tested and approved by the best industry experts and is constantly updated to meet the requirements of the actual 1Z0-1072-25 exam questions. ActualTestsQuiz reputation is established particularly with an outstanding success rate of 99.1%. This boosts up our popularity graph among the ambitious professionals who want to enrich their profiles with the most prestigious 1Z0-1072-25 certifications. Above all, your success is ensured with 100% ActualTestsQuiz money back guarantee. If our 1Z0-1072-25 test dumps do not help you pass exam paper, we shall refund your money in full.

Oracle Cloud Infrastructure 2025 Architect Associate test dumps & exam questions for Oracle 1Z0-1072-25

Our 1Z0-1072-25 test prep is of high quality. The passing rate and the hit rate are both high. The passing rate is about 98%-100%. We can guarantee that you have a very high possibility to pass the exam. The 1Z0-1072-25 guide torrent is compiled by the experts and approved by the professionals with rich experiences. The 1Z0-1072-25 prep torrent is the products of high quality compiled elaborately and gone through strict analysis and summary according to previous exam papers and the popular trend in the industry. The language is simple and easy to be understood. It makes any learners have no learning obstacles and the 1Z0-1072-25 Guide Torrent is appropriate whether he or she is the student or the employee, the novice or the personnel with rich experience and do the job for many years.

Oracle Cloud Infrastructure 2025 Architect Associate Sample Questions (Q39-Q44):

NEW QUESTION # 39

Which statement accurately describes ephemeral principals?

- A. Ephemeral principals represent long-lived service accounts.
- B. Ephemeral principals are another term for dynamic groups.
- C. Ephemeral principals are user accounts with limited lifespans.

- **D. Ephemeral principals are temporary credentials granted to resources.**

Answer: D

Explanation:

Ephemeral principals in Oracle Cloud Infrastructure (OCI) refer to temporary security credentials granted to resources, such as compute instances, to enable them to interact with OCI services securely. These credentials have a limited lifespan and are typically used in situations where resources need to authenticate temporarily without the need for long-lived credentials.

Use Case: Ephemeral principals are often used for instance principals, allowing compute instances to make API calls without the need to manage long-term keys or credentials.

Reference:

Oracle Cloud Infrastructure Documentation: Using Instance Principals

NEW QUESTION # 40

Which compute capacity type would you select to meet these requirements?

- **A. On-demand capacity**
- B. Preemptible capacity
- C. Dedicated host
- D. Capacity reservation

Answer: A

Explanation:

On-demand capacity is the compute capacity type in Oracle Cloud Infrastructure (OCI) that allows you to provision and use compute instances whenever needed, without any long-term commitment. This flexibility is ideal for various workloads, including development, testing, and production environments, where immediate availability and scalability are crucial.

Key Points:

On-Demand Capacity: On-demand compute instances provide users with the flexibility to spin up instances as required and only pay for the time the instances are running. This model is most suitable for workloads with unpredictable usage patterns or short-term requirements.

Flexibility and Scalability: With on-demand capacity, you can quickly scale your resources up or down based on your application's needs, ensuring that you only pay for the resources you actually use.

No Commitment: Unlike reserved capacity, on-demand capacity does not require any long-term commitment or upfront payment, making it an attractive option for organizations looking to avoid capital expenditures.

Reference:

Oracle Cloud Infrastructure Documentation: OCI Compute Pricing

Oracle Cloud Infrastructure Documentation: Compute Instance Lifecycle

Explanation of Incorrect Options:

A . Capacity reservation: This option allows you to reserve capacity in advance, ensuring that resources are available when needed. It's ideal for predictable workloads but may not be as cost-effective for fluctuating demands.

B . Preemptible capacity: Preemptible instances are a lower-cost option where instances can be terminated by OCI if resources are needed elsewhere. This is suitable for non-critical workloads that can tolerate interruptions.

D . Dedicated host: Dedicated hosts provide physical servers for your exclusive use, offering isolation and predictable performance. This option is more suitable for workloads requiring dedicated resources or compliance needs.

Thus, Option C: On-demand capacity is the correct choice for most general-purpose workloads needing flexibility and immediate availability without long-term commitment.

NEW QUESTION # 41

Which OCI feature should be used to ensure that communication between database servers and OCI Object Storage is secure?

- A. Use a Local Peering Gateway
- B. Use a VPN Gateway
- **C. Use a Service Gateway**
- D. Use a NAT Gateway

Answer: C

Explanation:

To ensure secure communication between database servers and OCI Object Storage, you should use a Service Gateway. A Service Gateway enables instances in your VCN to privately access OCI services like Object Storage without traversing the public internet. Security: The traffic between your database servers and Object Storage remains within the Oracle network, providing a secure and high-performance connection.

Reference:

Oracle Cloud Infrastructure Documentation: Service Gateway Overview

NEW QUESTION # 42

Which TWO statements are NOT correct regarding the Oracle Cloud Infrastructure (OCI) burstable instances?

- A. Baseline utilization is a fraction of each CPU core.
- B. **Burstable instances cost less than regular instances.**
- C. **Burstable instances are charged according to the baseline OCPU.**
- D. If the instance's average CPU utilization is below the baseline, it can burst above the baseline.

Answer: B,C

Explanation:

The following statements about OCI burstable instances are NOT correct:

A . Burstable instances cost less than regular instances: This is incorrect because burstable instances are not necessarily cheaper; the cost depends on the baseline utilization. While they allow for cost efficiency when running at a lower CPU baseline, they can become more expensive if frequently bursting above the baseline.

B . Burstable instances are charged according to the baseline OCPU: This is incorrect because burstable instances are billed based on actual OCPU usage, which includes both baseline and burst usage. If an instance frequently operates above its baseline, the cost will reflect this higher usage.

Correct Concepts:

C . Burstable instances can temporarily use more CPU than their baseline if the average CPU utilization is below the baseline.

D . Baseline utilization is a fraction of each CPU core, which determines the level of consistent performance available without bursting.

Reference:

Oracle Cloud Infrastructure Documentation: Burstable Instances

NEW QUESTION # 43

What is the primary purpose of the Web Application Acceleration service offered by Oracle Cloud Infrastructure (OCI)?

- A. **Speeding up traffic on layer 7 HTTP load balancers**
- B. Improving the reliability of layer 7 HTTP load balancers
- C. Monitoring and analyzing HTTP traffic patterns
- D. Encrypting HTTP traffic

Answer: A

Explanation:

The primary purpose of the Web Application Acceleration service offered by Oracle Cloud Infrastructure (OCI) is to speed up traffic on layer 7 HTTP load balancers. This service optimizes the delivery of web applications by reducing latency and improving response times, making it ideal for enhancing user experience on web applications.

Functionality: The service utilizes caching, compression, and other acceleration techniques to ensure that HTTP/S traffic is delivered efficiently.
