The Best 100% Free SC-300 – 100% Free Exam Reviews | Test SC-300 Answers

It is apparent that a majority of people who are preparing for the SC-300 exam would unavoidably feel nervous as the exam approaching, since you have clicked into this website, you can just take it easy now--our SC-300 learning materials. Our company

has spent more than 10 years on compiling study materials for the exam, and now we are delighted to be here to share our SC-300 Study Materials with all of the candidates for the exam in this field. There are so many striking points of our SC-300 preparation exam.

The Microsoft Identity and Access Administrator certification exam is ideal for professionals who are responsible for managing identity and access solutions in an enterprise environment. This includes security administrators, identity and access administrators, security analysts, and security engineers. SC-300 exam measures the candidate's knowledge of Microsoft Azure Active Directory, Azure AD Identity Protection, Azure AD Connect, and other Microsoft identity and access technologies. SC-300 exam also tests the candidate's ability to implement and manage identity and access solutions, including multi-factor authentication (MFA), conditional access, and role-based access control (RBAC).

To prepare for the Microsoft SC-300 exam, candidates are recommended to have hands-on experience with Azure AD and Azure services, as well as a deep understanding of identity and access management concepts. Microsoft offers a range of training resources, including instructor-led courses, self-paced online training, and practice exams, to help candidates prepare for the exam. Passing the Microsoft SC-300 Exam validates the candidate's expertise in identity and access management and demonstrates their ability to effectively manage identity and access solutions in Microsoft Azure. Microsoft Identity and Access Administrator certification is highly valued by employers and can help individuals advance their careers in the field of cloud-based identity and access management.

Microsoft Identity and Access Administrator Sample Questions (Q230-Q235):

NEW QUESTION # 230

Your company has an Azure Active Directory (Azure AD) tenant named contosri.com. The company has the business partners shown in the following table.

Name	Description
Fabrikam, Inc.	An Azure AD tenant that has two verified domains named fabrikam.com and adatum.com
Litware, Inc.	A third-party identity provider that uses the domain names of litwareinc.com and contoso.com

users can request access by using package 1.

Users at Fabrikam and Litware use all their respective domain names for email addresses.

You plan to create an access package named package1 that will be accessible only to the Fabrikam and Litware users.

You need to configure connected organizations for Fabrikam and Litware so that any of their users can request access by using package1.

What is the minimum number of connected organizations that you should create.

- A. 0
- B. 1
- **C. 2**
- D. 3

Answer: C

NEW QUESTION # 231

You have an Azure subscription named Sub1 that contains two resource groups named RG1 and RG2. Sub1 contains the users shown in the following table.

Name	Member of
User1	Group1, Group2
User2	Group2
User3	Group3

Sub1 contains the resources shown in the following table.

Name	Type	In resource group
VM1	Virtual machine	RG1
Vault1	Azure Key Vault	RG1
Vault2	Azure Key Vault	RG2

You create the role-based access control (RBAC) role assignments shown in the following table.

Role	Member of	Scope
Reader	Group1	Sub1
Key Vault Secrets User	Group2	RG2
Owner	Group3	RG1

For each of the following statements, select Yes if the statement is true. Otherwise, select No NOTE: Each correct selection is worth one point.

Answer Area		Yes	No
Statements	User1 can read the contents of the secrets stored in Vault1.	☐	☐
	User2 can read the contents of the secrets stored in Vault2.	☐	☐
	User3 can update the configuration of VM1.	☐	☐

Answer:

Explanation:

Answer Area		Yes	No
Statements	User1 can read the contents of the secrets stored in Vault1.	☐	☐
	User2 can read the contents of the secrets stored in Vault2.	☐	☐
	User3 can update the configuration of VM1.	☐	☐

Explanation:

Answer Area		Yes	No
Statements	User1 can read the contents of the secrets stored in Vault1.	☒	☐
	User2 can read the contents of the secrets stored in Vault2.	☒	☐
	User3 can update the configuration of VM1.	☒	☐

NEW QUESTION # 232

You have a Microsoft 365 tenant.

You need to identify users who have leaked credentials. The solution must meet the following requirements.

- * Identify sign-ins by users who are suspected of having leaked credentials.
- * Tag the sign-ins as a high risk event.
- * Immediately enforce a control to mitigate the risk, while still allowing the user to access applications.

What should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

To classify leaked credentials as high-risk, use:

- Azure Active Directory (Azure AD) Identity Protection
- Azure Active Directory (Azure AD) Privileged Identity Management (PIM)
- Identity Governance
- Self-service password reset (SSPR)

To trigger remediation, use:

- Client apps not using Modern authentication
- Device state
- Sign-in risk
- User location
- User risk

To mitigate the risk, select:

- Apply app enforced restrictions
- Block access
- Grant access but require app protection policy
- Grant access but require password change

Answer:

Explanation:

To classify leaked credentials as high-risk, use:

- Azure Active Directory (Azure AD) Identity Protection
- Azure Active Directory (Azure AD) Privileged Identity Management (PIM)
- Identity Governance
- Self-service password reset (SSPR)

To trigger remediation, use:

- Client apps not using Modern authentication
- Device state
- Sign-in risk
- User location
- User risk

To mitigate the risk, select:

- Apply app enforced restrictions
- Block access
- Grant access but require app protection policy
- Grant access but require password change

Explanation:

To classify leaked credentials as high-risk, use:

- Azure Active Directory (Azure AD) Identity Protection
- Azure Active Directory (Azure AD) Privileged Identity Management (PIM)
- Identity Governance

NEW QUESTION # 233

You have a Microsoft 365 E5 tenant.

You purchase a cloud app named App1.

You need to enable real-time session-level monitoring of App1 by using Microsoft Cloud app Security.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

From Microsoft Cloud App Security, create a session policy.

Publish App1 in Azure Active Directory (Azure AD).

Create a conditional access policy that has session controls configured.

From Microsoft Cloud App Security, modify the Connected apps settings for App1.

Answer Area

Answer:

Explanation:

Actions

From Microsoft Cloud App Security, create a session policy.

Publish App1 in Azure Active Directory (Azure AD).

Create a conditional access policy that has session controls configured.

From Microsoft Cloud App Security, modify the Connected apps settings for App1.

Answer Area

Publish App1 in Azure Active Directory (Azure AD).

From Microsoft Cloud App Security, modify the Connected apps settings for App1.

From Microsoft Cloud App Security, create a session policy.

Create a conditional access policy that has session controls configured.

Explanation:

Publish App1 in Azure Active Directory (Azure AD).

From Microsoft Cloud App Security, modify the Connected apps settings for App1.

From Microsoft Cloud App Security, create a session policy.

Create a conditional access policy that has session controls configured.
