

Ping Identity PAP-001 PDF Questions - Ensure Your Success In Exam

At present, artificial intelligence is developing so fast. So machines inevitably grow smarter and more agile. In the result, many simple jobs are substituted by machines. In order to keep your job, choose our PAP-001 exam questions and let yourself become an irreplaceable figure. In fact, our PAP-001 Study Materials can give you professional guidance no matter on your daily job or on your career. And with the PAP-001 certification, you will find you can be better with our help.

Our technology and our staff are the most professional. What are the PAP-001 practice materials worthy of your choice, I hope you spend a little time to find out. First of all, after you make a decision, you can start using our PAP-001 Exam Questions soon. We will send you an email within five to ten minutes after your payment is successful. You can choose any version of PAP-001 study guide, as long as you find it appropriate.

PAP-001 New Test Materials, PAP-001 Question Explanations

We are constantly updating our practice material to ensure that you receive the latest preparation material based on the actual Ping Identity PAP-001 exam content. Up to 1 year of free Certified Professional - PingAccess (PAP-001) exam questions updates are also available at Dumpkiller. The Dumpkiller offers a money-back guarantee (terms and conditions apply) for students who fail to pass their Certified Professional - PingAccess (PAP-001) exam on the first try.

Ping Identity Certified Professional - PingAccess Sample Questions (Q44-Q49):

NEW QUESTION # 44

A business application must be accessible via two FQDNs. Which PingAccess functionality should an administrator use to meet this requirement?

- A. Applications
- B. Web Sessions
- C. Sites
- **D. Virtual Hosts**

Answer: D

Explanation:

Virtual Hosts in PingAccess define the external FQDNs (and ports) through which applications are accessed.

An application can be bound to multiple virtual hosts to allow access via multiple FQDNs.

Exact Extract:

"A virtual host specifies the fully qualified domain name and port number through which an application is accessed."

* Option A (Virtual Hosts) is correct - multiple FQDNs can be supported by assigning multiple virtual hosts.

* Option B (Applications) define resource protection but do not manage FQDN binding.

* Option C (Sites) define back-end targets, not the public-facing FQDN.

* Option D (Web Sessions) handle authentication state, unrelated to hostnames.

Reference: PingAccess Administration Guide - Virtual Hosts

NEW QUESTION # 45

What is the purpose of the `thepa.operational.mode` configuration setting?

- A. To determine whether a server is a development or production server
- **B. To determine the role the server performs in a cluster**
- C. To determine if a server should participate in cluster replication
- D. To determine if a cluster node is enabled or disabled

Answer: B

Explanation:

The `thepa.operational.mode` property in `run.properties` defines the role of the node in a PingAccess deployment (e.g., `STANDALONE`, `CLUSTERED_CONSOLE`, `CLUSTERED_CONSOLE_REPLICA`, `ENGINE`).

Exact Extract:

"The `thepa.operational.mode` property determines the role of the server in the cluster, such as standalone, console, console replica, or engine."

* Option A is incorrect - replication is implicit in certain roles, not controlled directly.

* Option B is correct - the setting specifies whether the node is admin console, replica, or engine.

* Option C is incorrect - development vs production is not a function of this setting.

* Option D is incorrect - it does not enable/disable nodes.

Reference: PingAccess Administration Guide - `run.properties`

NEW QUESTION # 46

An administrator needs to configure a protected web application using the Authorization Code login flow.

Which two configuration parameters must be set? (Choose 2 answers.)

- **A. OpenID Connect Login Type**
- **B. OAuth Client ID**
- C. OAuth Token Introspection Endpoint
- D. OpenID Connect Issuer
- E. Virtual Host

Answer: A,B

Explanation:

When using the Authorization Code Flow for authentication, PingAccess must be configured with:

* An OAuth Client ID that identifies the application to the IdP.

* The OpenID Connect Login Type set to Authorization Code.

Exact Extract:

"When configuring an OIDC web session, specify the OAuth client ID and select the OpenID Connect login type (Authorization Code, Hybrid, or Implicit)."

- * Option A (OAuth Token Introspection Endpoint) is not required for Authorization Code flow - token introspection is used in other cases.
- * Option B (OAuth Client ID) is correct - required for OIDC authorization requests.
- * Option C (OpenID Connect Issuer) is discovered automatically via metadata when you configure the token provider.
- * Option D (Virtual Host) is required for application exposure but not specific to OIDC flow.
- * Option E (OpenID Connect Login Type) is correct - must be set to "Authorization Code." Reference: PingAccess Administration Guide - Configuring OIDC Web Sessions

NEW QUESTION # 47

A modified application now requires additional attributes to be passed in the headers. What needs to be modified in order to pass the additional attributes?

- A. Web Session Attribute Rule
- B. JWT Identity Mapping
- C. HTTP Request Header Rule
- **D. Header Identity Mapping**

Answer: D

Explanation:

To pass user attributes into HTTP headers for applications, PingAccess uses Identity Mappings. When attributes need to be passed specifically as headers, the administrator must update the Header Identity Mapping.

Exact Extract:

"Header identity mappings map attributes from a user's web session to HTTP headers that are then sent to the back-end application."

- * Option A (HTTP Request Header Rule) is incorrect - this adds or modifies static request headers, not user attributes.
 - * Option B (Header Identity Mapping) is correct - this maps identity attributes into headers dynamically.
 - * Option C (JWT Identity Mapping) is incorrect - that's used for passing attributes as claims in JWTs.
 - * Option D (Web Session Attribute Rule) is incorrect - that is for access control evaluation, not propagation of attributes.
- Reference: PingAccess Administration Guide - Identity Mapping (Header Identity Mapping)

NEW QUESTION # 48

An administrator is preparing to rebuild an unrecoverable primary console and must promote the replica admin node. Which two actions must the administrator take? (Choose 2 answers.)

- A. Restart all nodes in the cluster.
- B. Restart the replica admin node.
- **C. Modify `bootstrap.properties` and set `theengine.admin.configuration.hostvalue` to point at the replica admin node.**
- D. Change `pepa.operational.modeto` to `CLUSTERED_CONSOLE_REPLICA` on one of the engine nodes.
- **E. Change `pepa.operational.modeto` to `CLUSTERED_CONSOLE` on the replica admin node.**

Answer: C,E

Explanation:

From the "Promoting the replica administrative node" documentation:

* Exact Extract:

"Open the `<PA_HOME>/conf/run.properties` file in a text editor. Locate the `pepa.operational.modeline` and change the value from `CLUSTERED_CONSOLE_REPLICA` to `CLUSTERED_CONSOLE`. These properties are case-sensitive. Do not restart the replica node during the promotion process." Ping Identity Documentation

* Also from the documentation under "Next steps" / manual promotion / "Using the admin API ..." "When promoting the replica, there is also mention of setting the new host-port in the primary admin configuration so that engine nodes and configuration references now point to the promoted replica. One of the API properties is `editRunPropertyFile` (to flip the mode), another is `editPrimaryHostPort`, which causes the primary-admin host setting to be updated. Ping Identity Documentation Using those facts:

Why C is correct:

* Option C says: Change `pepa.operational.modeto` to `CLUSTERED_CONSOLE` on the replica admin node.

This directly matches the documented manual promotion step: switch `pepa.operational.modeto` from `CLUSTERED_CONSOLE_REPLICA` to `CLUSTERED_CONSOLE`. Ping Identity Documentation +1

* This is essential for promoting the replica to primary console.

Why E is correct:

* Option E: Modify `bootstrap.properties` and set the `engine.admin.configuration.host` value to point at the replica admin node. While the documentation doesn't always name the exact property `engine.admin`.

`configuration.host`, the "promote via admin API" includes updating the "primary host:port" in the configuration so that engine nodes' configuration queries (or whatever is used by engines) point to the new primary. This maps to ensuring that engine nodes know that the promoted replica is now the administrative node. This requiring modifying the bootstrap or configuration that engine nodes use to find the administrative host is essential. Ping Identity Documentation Why the other options are incorrect:

* A. Change `pa.operational.mode` to `CLUSTERED_CONSOLE_REPLICA` on one of the engine nodes. No.

Engine nodes should have `pa.operational.mode = CLUSTERED_ENGINE`, not console modes.

`CLUSTERED_CONSOLE_REPLICA` is an admin/replica console mode, not applicable for engines.

`docs.ping.directory+2` Ping Identity Documentation+2

* B. Restart all nodes in the cluster. The documentation explicitly says do not restart the replica node during the promotion process because restart can cause file corruption or failure to properly promote.

Only certain restarts are needed after configuration updates. So restarting all nodes is not a correct required action. Ping Identity Documentation

* D. Restart the replica admin node. As above, for manual promotion, a restart of the replica admin node is not required (and is even discouraged during the promotion process). The change in `run.properties` is detected without restarting. Ping Identity Documentation Reference: PingAccess Reference Guide - Promoting the replica administrative node / Manually promoting the replica administrative node Ping Identity Documentation+1

NEW QUESTION # 49

.....

These Ping Identity PAP-001 Exam questions help you practice theoretical and practical skills in different aspects, making problem-solving easier. Our Ping Identity PAP-001 questions PDF is a complete bundle of problems presenting the versatility and correlativity of questions observed in past exam papers. These questions are bundled into Ping Identity PAP-001 PDF Questions following the official study guide.

PAP-001 New Test Materials: https://www.dumpkiller.com/PAP-001_braindumps.html

Ping Identity Latest PAP-001 Exam Fee So they will be your great helper, Here it is our honor to help you with the actual questions you want to for such a long time by providing our useful PAP-001 practice test, Ping Identity Latest PAP-001 Exam Fee Can you imagine the practice exam can be installed on many devices, We believe that you will like the Software version of our PAP-001 exam questions.

In addition, tunneled packets may bypass other configured security PAP-001 mechanisms, thus potentially requiring the addition of other security features to provide defense in depth and breadth security.

Free PDF Ping Identity PAP-001 - Marvelous Latest Certified Professional - PingAccess Exam Fee

For example, you can view a Mac image under PAP-001 New Dumps Book default Windows display conditions, So they will be your great helper, Here it is our honor to help you with the actual questions you want to for such a long time by providing our useful PAP-001 Practice Test.

Can you imagine the practice exam can be installed PAP-001 New Dumps Book on many devices, We believe that you will like the Software version of our PAP-001 exam questions, Not only our PAP-001 exam prep is accurate and valid to help you pass exam but also we have good customer service.
