## PK0-005 Certified Questions, Pass4sure PK0-005 Study Materials

If you buy Easy4Engine CompTIA PK0-005 Exam Training materials, you will solve the problem of your test preparation. You will get the training materials which have the highest quality. Buy our products today, and you will open a new door, and you will get a

better future. We can make you pay a minimum of effort to get the greatest success.

CompTIA Project+ Certification is an industry-recognized certification designed for professionals who are interested in project management. CompTIA Project+ Certification Exam certification validates the knowledge and skills of the candidate in project management and helps them to excel in their career. The latest version of the exam, CompTIA PK0-005, was released in March 2021 and is designed to meet the current requirements of the industry.

CompTIA PK0-005 Exam is a certification exam offered by CompTIA, a leading provider of IT certifications. It is designed for individuals who are interested in pursuing a career in project management or are already working in the field and looking to enhance their skills and knowledge. PK0-005 exam covers a range of project management concepts and techniques, including project initiation, planning, execution, monitoring and controlling, and project closure.

## CompTIA Project+ Certification Exam Sample Questions (Q117-Q122):

### NEW QUESTION # 117

After new capabilities were deployed in a system, issues with preexisting capabilities were reported. Which of the following testing cycles should be used to prevent this issue?

- A. Performance testing
- B. User acceptance testing
- C. Unit testing
- D. Stress testing

**Answer: C**

Explanation:

Unit testing is a testing technique that verifies the functionality and quality of individual units or components of software, such as modules, classes, functions, etc. Unit testing can help prevent issues with preexisting capabilities by detecting and fixing errors at an early stage of development, before they affect the integration and system testing. Unit testing can also ensure that new capabilities do not break or interfere with the existing ones, by checking the compatibility and dependencies of the units. Unit testing can be performed by developers using tools and frameworks that automate the process and generate reports. ### NEW QUESTION # 118

Before a configuration can be made to a system in development, a document containing information about how the new system will interact with other systems within the organization needs to be written. Which of the following relationships best describes this scenario?

- A. Finish-to-finish
- B. Start-to-finish
- C. Finish-to-start
- D. Start-to-start

**Answer: C**

Explanation:

A finish-to-start relationship is a type of logical dependency between two tasks, in which the first task must be completed before the second task can start. In this scenario, the document containing information about how the new system will interact with other systems within the organization is a prerequisite for the configuration of the system in development. Therefore, the document writing task must finish before the configuration task can start, which is a finish-to-start relationship. References = CompTIA Project+ Study Guide: Exam PK0-005, 3rd Edition, Chapter 6: Schedule Management1; CompTIA Project+ Certification Study Guide, 3rd Edition, Chapter 6: Schedule Management2

### NEW QUESTION # 119

Which of the following can be used to determine whether a sample product is within an acceptable range?

- A. Control chart

- B. Fishbone diagram
- C. Velocity chart
- D. Scatter diagram

**Answer: A**

Explanation:

A control chart is a graphical tool that displays the variation of a process over time and compares it to predetermined control limits. It can be used to determine whether a sample product is within an acceptable range by checking if the sample values fall within the upper and lower control limits, which indicate the expected variation of the process. If the sample values are outside the control limits or show a non-random pattern, it indicates that the process is out of control and there may be some assignable causes of variation that need to be investigated and corrected. ### NEW QUESTION # 120

During a gate review meeting, the deliverable was rejected by the customer.

#### INSTRUCTIONS

Review the dashboard.

\* Part 1: Drag and drop each task, placing them in the correct order based on the project change control process.

\* Part 2: Select the proper document(s) to be updated.

If at any time you would like to bring back the initial state of the simulation, please click the Reset All button.

Part 1:

Change Control Process		Drag and Drop
1	?	Perform a demonstration.
2	?	Define new requirements and record changes.
3	?	Update and test the deliverable.
4	?	Consult the RACI matrix.
5	Select the appropriate document(s) to update.	Assess the schedule, risk, and cost.
6	?	Obtain a sign off.
7	?	Make an announcement on the company portal.
8	?	

Part 2:

### Question Options

Select the appropriate document(s) to update.

☐

Risk register

☐

Schedule

☐

Statement of work

☐

Organizational chart

☐

Change log

☐

Issues log

☐

WBS dictionary

### Answer:

Explanation:

Part 1:

Change Control Process:

- \* Consult the RACI matrix.
- \* Define new requirements and record changes.
- \* Assess the schedule, risk, and cost.
- \* Perform a demonstration.
- \* Obtain a sign off.
- \* Update and test the deliverable.
- \* Make an announcement on the company portal.

The change control process is a sequence of steps that helps to manage and document any changes or modifications to a project scope, schedule, cost, quality, or resources. The change control process typically involves the following steps:

- \* Consult the RACI matrix. A RACI matrix is a tool that defines and clarifies the roles and responsibilities of each team member for each task or activity in a project. RACI stands for responsible, accountable, consulted, and informed. Consulting the RACI matrix can help to identify who needs to be involved or informed about the change request and how to communicate with them.
- \* Define new requirements and record changes. The new requirements and changes are the details of what needs to be modified or added to the project deliverables or objectives based on the customer feedback or request. Defining and recording the new requirements and changes can help to communicate and justify the need and rationale for the change and its implications on the project scope and quality.
- \* Assess the schedule, risk, and cost. The schedule, risk, and cost are the aspects of the project that may be affected by the change request. Assessing the schedule, risk, and cost can help to determine the impact and feasibility of the change and identify any possible alternatives or corrective actions to minimize or avoid its negative effects.
- \* Perform a demonstration. A demonstration is a presentation or show of how the modified or updated deliverable works or meets the customer expectations or requirements. Performing a demonstration can help to validate and verify that the change request has been implemented correctly and effectively and to obtain feedback or approval from the customer or stakeholders.
- \* Obtain a sign off. A sign off is a formal acceptance and approval of the change request and its deliverables from the customer or stakeholders. Obtaining a sign off can help to confirm that the change request has been completed successfully and satisfactorily and to close the change control process.

\* Update and test the deliverable. The deliverable is the product or service that is produced or provided by the project. Updating and testing the deliverable can help to ensure that it meets the quality standards and criteria and that it works as expected after implementing the change request.

\* Make an announcement on the company portal. The company portal is a platform or channel that allows internal communication and collaboration among employees within an organization. Making an announcement on the company portal can help to inform and update other team members or departments about the change request and its outcomes and to share any lessons learned or best practices from the change control process.

Part2:

\* Risk register: A risk register is a document that identifies, analyzes, and records the potential risks or uncertainties that may affect a project. Updating the risk register can help to capture any new or modified risks that may arise from the change request and to plan and implement appropriate risk responses.

\* Schedule: A schedule is a document that shows the planned start and end dates, durations, dependencies, and progress of each task or activity in a project. Updating the schedule can help to reflect any changes or adjustments to the project timeline or milestones that may result from the change request and to monitor and control the project performance and delivery.

\* Statement of work: A statement of work (SOW) is a document that defines the scope, deliverables, schedule, and terms and conditions of a project or contract. Updating the SOW can help to document any changes or additions to the project scope or deliverables that may be requested or agreed upon by the customer or stakeholders and to ensure alignment and agreement on what needs to be done and how it will be done.

\* Change log: A change log is a document that tracks and records any changes or modifications that are made to the project scope, schedule, cost, quality, or resources during a project. Updating the change log can help to document the change request, approval, implementation, and impact of each change and ensure traceability and transparency.

### NEW QUESTION # 121

As a part of a project, structured cabling activities have been outsourced to another company. The agreement is that work will take six weeks to complete and will be performed at different locations. Which of the following should the project manager do? (Select two).

- A. Assign the resources.
- B. Purchase the materials.
- **C. Approve the deliverables.**
- D. Accept delays in the work.
- **E. Monitor the performance.**
- F. Negotiate with the vendors.

**Answer: C,E**

Explanation:

The project manager should approve the deliverables and monitor the performance of the outsourced structured cabling activities. These are the responsibilities of the project manager when dealing with external vendors or contractors, as they ensure that the quality standards, scope, schedule, and budget are met according to the contract terms and the project plan. The project manager should also communicate regularly with the vendor and provide feedback and guidance as needed. The other options are not correct because:

Purchasing the materials is not the responsibility of the project manager, but the vendor who is performing the structured cabling activities. The project manager should only verify that the materials are suitable and available for the project.

Assigning the resources is not the responsibility of the project manager, but the vendor who is performing the structured cabling activities. The project manager should only ensure that the vendor has the adequate and qualified resources to complete the work.

Accepting delays in the work is not a good practice for the project manager, as it can negatively affect the project schedule, scope, and quality. The project manager should proactively identify and manage the risks and issues that may cause delays, and implement contingency plans or corrective actions if necessary.

Negotiating with the vendors is not a task that the project manager should do during the execution of the structured cabling activities, as it should have been done during the planning and procurement phases of the project. The project manager should only adhere to the contract terms and conditions that have been agreed upon with the vendor, and only renegotiate if there are significant changes or disputes that require it.
