Mit Microsoft PL-400 Zertifikat können Sie Ihre Berufsaussichten verbessern und viele neuen Chancen erschließen. ITZert ist eine geeignete Website für die Kandidaten, die an der Microsoft PL-400 Zertifizierungsprüfung teilnehmen. Es wird nicht nur alle Informationen zur Microsoft PL-400 Zertifizierungsprüfung, sondern Ihnen auch eine gute Lernchance bieten. ITZert wird Ihnen helfen, die Microsoft PL-400 Zertifizierungsprüfung ganz einfach zu bestehen.

Wir wissen, wie bedeutend die Microsoft PL-400 Prüfung für die in der IT-Branche angestellte Leute ist. Deshalb entwickeln wir die Prüfungssoftware für Microsoft PL-400, die Ihnen große Hilfe leisten können. Die Prüfungsunterlagen, die Sie brauchen, haben unser Team schon gesammelt. Außerdem haben wir die Unterlagen wissenschaftlich analysiert und geordnet. Wir tun dies alles, um Ihr Stress und Belastung der Vorbereitung auf Microsoft PL-400 zu erleichtern.

PL-400 Dumps Deutsch & PL-400 Buch

Es kann den Erfolg erleichtern, wenn Sie den kürzen Weg und die Geschicke benutzen. Wenn Sie die Garantie für einmaligen Erfolg zur Microsoft PL-400 Zertifizierungsprüfung, ist Microsoft PL-400 Dumps von ITZert Ihre einzig und beste Wahl. Die Dumps werden von Ihnen immer gut bewertet. Und es ist unmöglich für Sie, bessere Dumps zu finden. Sie können Ihnen die Prüfungsinhalten zeigen, damit Sie mit dem Ziel die Kenntnisse lernen. Außerdem können Sie alle Prüfungsfragen und -antworten im Gedächtnis halten, wenn Sie nicht genug Zeit für die Vorbereitung haben. Die Dumps beinhalten viele Prüfungsfragen in aktuellen Prüfungen. Damit können Sie die Microsoft PL-400 Prüfung bestehen.

Microsoft Power Platform Developer PL-400 Prüfungsfragen mit Lösungen (Q326-Q331):

326. Frage

You need to use the Dynamics 365 Sales Web API to retrieve metadata information.

How should you complete the Web API queries? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Metadata item

Web API query

Entity

GET /api/data/v9.0/EntityDefinitions(

▼ = 'account')

Name
EntityName
LogicalName
SchemaName

Attribute

GET /api/data/v9.0/EntityDefinitions(

▼ = 'account')/Attributes(LogicalName=telephone1)

Name
LogicalName
SchemaName
AttributeName

Relationship

GET /api/data/v9.0/RelationshipDefinitions(

▼ = 'Account_Tasks')

Name
LogicalName
SchemaName
RelationshipName

Global Option Set

GET /api/data/v9.0/GlobalOptionSetDefinitions(

▼ = 'metric_goaltype')

Name
LogicalName
SchemaName
AttributeName

Antwort:

Begründung:

327. Frage

A client requires that the system send an email from a button on their customer contact form.

You need to call the action from JavaScript.

Which two functions achieve this result? Each correct presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Xrm.WebApi.online.execute()
- B. Xrm.WebApi.online.updateRecord()
- C. Xrm.WebApi.online.createRecord()
- D. Xrm.WebApi.online.executeMultiple()

Antwort: C,D

Begründung:

Xrm.WebApi.online.executeMultiple executes a collection of action, function, or CRUD operations.

Xrm.WebApi.online.execute executes a single action, function, or CRUD operation.

Reference:

<https://docs.microsoft.com/en-us/powerapps/developer/model-driven-apps/clientapi/reference/xrm-webapi>

/online/executemultiple

/online/execute

328. Frage

You are developing a new Power Apps Component Framework (PCF) control.

The control must be deployed to a development environment by using the Power Apps CLI and a new solution.

You need to deploy the PCF control.

Which four actions should you perform in sequence? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer area
Add a solution reference to the project.	 Microsoft
Build the project and solution.	
Create a solution.	
Deploy the solution.	

Antwort:

Begründung:

Actions	Answer area
Add a solution reference to the project.	Create a solution.
Build the project and solution.	Add a solution reference to the project.
Create a solution.	Build the project and solution.
Deploy the solution.	Deploy the solution.

Explanation

Graphical user interface, text, application, email Description automatically generated

Create a solution.
Add a solution reference to the project.
Build the project and solution.
Deploy the solution.

Step 1: Create a solution

Create a new solutions project using the following command. The solution project is used for bundling the code component into a solution zip file that is used for importing into Dataverse.

```
pac solution init --publisher-name developer --publisher-prefix dev
```

Step 2: Add a solution reference to the project

Once the new solution project is created, refer the Solutions folder to the location where the created sample component is located. You can add the reference using the command shown below. This reference informs the solution project about which code components should be added during the build. You can add references to multiple components in a single solution project.

pac solution add-reference --path c:\downloads\mysamplecomponent

Step 3: Build the project and solution

To generate a zip file from the solution project, go into your solution project directory and build the project using the following command.

msbuild /t:build /restore

Step 4: Deploy the solution

Reference:

<https://docs.microsoft.com/en-us/powerapps/developer/component-framework/import-custom-controls>

329. Frage

A developer must register a step using the Plug-in registration tool.

You need to associate the correct Event Pipeline Stage of Execution with its purpose.

Which stage should you associate with each description? To answer, drag the appropriate stages to the correct descriptions. Each stage may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Stages	Answer Area	
	Description	Stage
PreValidation	Cancel the operation before the database transaction.	Stage
PreOperation	Change any values for an entity within the database transaction.	Stage
MainOperation	Modify any properties of the message before it returns to the caller.	Stage
PostOperation		

Antwort:

Begründung:

Stages	Answer Area	
	Description	Stage
PreValidation	Cancel the operation before the database transaction.	PreValidation
PreOperation	Change any values for an entity within the database transaction.	PreOperation
MainOperation	Modify any properties of the message before it returns to the caller.	PostOperation
PostOperation		

Explanation

Description	Stage
Cancel the operation before the database transaction.	PreValidation
Change any values for an entity within the database transaction.	PreOperation
Modify any properties of the message before it returns to the caller.	PostOperation

The event pipeline allows you to configure when in the event the plug-in code will execute. The event pipeline is divided into the following events and stages:

Box 1: PreValidation

Pre-event/Pre-Validation

This stage executes before anything else, even before basic validation if the triggering action is even allowed based on security. Therefore, it would be possible to trigger the plug-in code even without actually having permission to do so and great consideration must be used when writing a pre-validation plug-in. Also, execution in this stage might not be part of the database transaction. Examples:- security checks being performed to verify the calling or logged on user has the correct permissions to perform the intended operation.

Box 2: PreOperation

Pre-event/Pre-Operation

This stage executes after validation, but before the changes have been committed to database. This is one of the most commonly used stages.

Example uses:

If and "update" plug-in should update the same record, it is best practice to use the pre-operation stage and modify the properties. That way the plug-in update is done within same DB transaction without needing additional web service update call.

Box 3: PostOperation

Plug-ins which are to execute after the main operation. Plug-ins registered in this stage are executed within the database transaction. This stage executed after changes have been committed to database. This is one of the most used stages.

Example uses:

Most of the "Create" plugins are post-event. This allows access to the created GUID and creation of relationships to newly created record.

<https://community.dynamics.com/crm/f/microsoft-dynamics-crm-forum/216569/ms-crm-plugin-execution-pipeli>

330. Frage

You need to identify the execution mode that is being used for the ISV solution reported by User5.

Which type of execution mode is in use?

- A. transfer
- B. atomicity
- C. synchronous
- D. asynchronous

Antwort: C

Begründung:

Explanation

User5 receives the error message: 'Endpoint unavailable' during a test of the technician dispatch ISV solution.

When you choose to use a synchronous execution mode any failure will be reported back to the user of the application with an Endpoint unavailable error dialog informing the user that the webhook service endpoint may be configured incorrectly or is not available.

<https://docs.microsoft.com/en-us/powerapps/developer/common-data-service/use-webhooks>

Topic 2, Bellows Sports

Case study

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the button to return to the question.

Background

Bellows Sports is the region's newest, largest, and most complete sports complex. The company features baseball and soccer fields and two full-size hockey rinks. The complex provides coaching, recreational leagues, a pro shop, and state-of-the art customer and player amenities.

The company is organized into the following divisions:

- * Baseball
- * Hockey
- * Soccer

Bellow Sports runs tournaments several times per year. Each tournament runs six weeks.

Current environment

Requirements

Bellow Sports tracks players and events in Microsoft Excel workbooks and uses email to communicate with players, partners, and prospective customers. The company uses a proprietary cloud-based accounting system.

The company relies on referrals from athletes for new business. Bellows uses a third-party marketing company to gather feedback and referrals from athletes. The third-party marketing company uploads a Microsoft Excel file containing lists of potential customers and players to the FTP site that Bellows Sports maintains.

Tournaments

Customer information is stored in the Accounts entity. Each tournament record must list the associated sales representative as the tournament owner. When team members create tournament records they must enter the start date for a tournament. The end date of the tournament must be automatically calculated.

Registration form

You must create a form to allow players to register for tournaments. The registration form must meet the following requirements:

Division	Requirement
Baseball	Capture the age and weight of the player. The height field must not display.
Hockey	Capture the age, height, and weight of the player.
Soccer	Capture the age of the player. The height and weight fields must not display.

* Each division has tournaments that take place in specific locations. Users must be able to select the division for a tournament location.

* Information about upcoming tournaments must be pre-located into the registration form when the registration form loads.

* The form must include a custom button that sends an email confirmation to the player after the player registers.

* The button must not be visible until after the form is saved.

Security

The company identifies the following job roles:

Role	Task
Sales representative	These users will enter data into Dynamics 365 Customer Service.
Intern	These users will create Power Apps apps, and connectors, and create Power Automate flows.
Manager	These users will add users, assign security roles, and manage data security.

You must grant users the minimum permissions required to perform their job tasks.

Data automation

* Customer name must be added to Dynamics 365 Finance automatically after it is entered.

* You must produce a report that details the number of registrations for a day and send the report as a PDF to the management team.

* You must implement mechanisms to handle all code-related errors.

* When a customer record is updated, the system must look up the account number for the customer in the accounting system.

* Referrals must be imported into the system as soon as they are available.

Issues

Apps

* The captions for the New and Save buttons do not render properly on the form.

* Interns can create apps but cannot interact with their own data.

Portal

The query for all registered users must return the data categorized by division. Queries must return only the Name and Sport fields.

Queries return all fields. The query is as follows:

```
GET [Organization URI]/api/data/v9.1/accounts?  
&$orderby=Name, sport  
&$filter=sport ne null
```

Solution checker issues

You run solution checker and observe errors in the following code sets:

Set	Code	Error message
Code set 1	<pre> CS101 var columns = new ColumnSet(); CS102 columns.AllColumns = true; CS103 var query = new QueryExpression("account"); CS104 query.ColumnSet = columns; CS105 var results = service.RetrieveMultiple(query); </pre>	il-specify-column
Code Set 2	<pre> CS201 WebRequest request = WebRequest.Create ("https://www.bellows.com/api/stuff"); CS202 HttpResponseMessage response = new HttpWebResponse(); CS203 CS204 response = request.GetResponse(); CS205 response.Close(); </pre>	il-turn-off-keepalive

Code

The following code runs when the registration form loads. You must implement a mechanism to handle errors that occur in the code:

```

UpdateRecord.js (Line numbers are included for reference only.)

UR01
UR02 var data =
UR03 {
UR04     "name": "Updated Account"
        "creditonhold" : true,
        "description" : "This is an account update",
        "revenue" : 10,000,
        "Division" : 2
    }
UR05 . . .
UR06

```
