Microsoft Power Automate RPA Developer Sample Questions (Q116-Q121):

NEW QUESTION # 116

You are automating a form on a website. The website uses the following HTML markup to define each field on the form:

```
<div _ngcontent-c1="" class="col s6 m6 l6">
  <div class="ng-invalid ng-dirty ng-touched">
    <label>Field1</label><input ng-reflect-name="labelField1" class="ng-pristine ng-invalid ng-touched">
  </div>
</div>
```

The label for each field is unique in the form.

You need to write data to the form.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statement	Yes	No
You configure the following selector: <code>input[ng-reflect-name="labelField1"]</code> The automation will add data to the form.	☐	☐
You configure the following selector: <code>div:has(label:contains("Field1")) > input</code> The automation will add data to the form.	☐	☐
You add the Run JavaScript function on web page action to the flow: <pre>function ExecuteScript() { \$("div:contains('Field1') > input") .val("Field's 1 value") }</pre> The action adds data to the form.	☐	☐

Answer:

Explanation:

Answer Area

Statement	Yes	No
You configure the following selector: <code>input[ng-reflect-name="labelField1"]</code> The automation will add data to the form.	☐	☒
You configure the following selector: <code>div:has(label:contains("Field1")) > input</code> The automation will add data to the form.	☒	☐
You add the Run JavaScript function on web page action to the flow: <pre>function ExecuteScript() { \$("div:contains('Field1') > input") .val("Field's 1 value") }</pre> The action adds data to the form.	☐	☐

Explanation:

Graphical user interface, text, application, email Description automatically generated

Answer Area		Yes	No
Statements You configure the following selector: <code>input[ng-reflect-name="labelField1"]</code> The automation will add data to the form.		☐	☒
You configure the following selector: <code>div:has(label:contains("Field1")) > input</code> The automation will add data to the form.		☒	☐
You add the Run JavaScript function on web page action to the flow: <pre>function ExecuteScript() { \$("div:contains('Field1') > input") .val("Field's I value") }</pre>		☒	☐
 Microsoft The action adds data to the form.			

NEW QUESTION # 117

A company stores confidential documents in a SharePoint document library.

A developer must create an automation solution in a default environment that processes documents from the SharePoint library and uploads approved documents to Azure File Storage for archiving purposes. The automation must meet the following requirements:

- * Prevent modification or deletion of approved documents from Azure File Storage.
- * Prevent sharing of documents from SharePoint or Azure File Storage.

You need to configure a data loss prevention (DLP) policy.

Which five actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Set the policy scope to Exclude certain environments and add the default environment.	 Microsoft
Add the SharePoint and Approvals connectors to the Business category. Add the Azure File Storage connector to the Blocked category.	
Configure Azure File Storage connector actions.	
Set the policy scope to Add multiple environments and add the default environment.	
Add the SharePoint, Azure File Storage, and Approvals connectors to the Business category.	
Add the SharePoint, Azure File Storage, and Approvals connectors to the Non-business category.	
Confirm and save the policy.	
Create a new data policy in the Microsoft Power Platform admin center.	

Answer:

Explanation:

Actions	Answer Area
Set the policy scope to Exclude certain environments and add the default environment.	Create a new data policy in the Microsoft Power Platform admin center.
Add the SharePoint and Approvals connectors to the Business category. Add the Azure File Storage connector to the Blocked category.	Set the policy scope to Exclude certain environments and add the default environment.
Configure Azure File Storage connector actions.	Add the SharePoint and Approvals connectors to the Business category. Add the Azure File Storage connector to the Blocked category.
Set the policy scope to Add multiple environments and add the default environment.	Configure Azure File Storage connector actions.
Add the SharePoint, Azure File Storage, and Approvals connectors to the Business category.	Confirm and save the policy.
Add the SharePoint, Azure File Storage, and Approvals connectors to the Non-business category.	
Confirm and save the policy.	
Create a new data policy in the Microsoft Power Platform admin center.	

Explanation

Answer Area
Create a new data policy in the Microsoft Power Platform admin center.
Set the policy scope to Exclude certain environments and add the default environment.
Add the SharePoint and Approvals connectors to the Business category. Add the Azure File Storage connector to the Blocked category.
Configure Azure File Storage connector actions.
Confirm and save the policy.

NEW QUESTION # 118

A company has a customer relationship management (CRM) application that runs on a virtual machine (VM) in Azure.

The solution must automatically extract common invoice data from documents sent as email attachments and save the data to the company's CRM application.

You need to design the solution.

In which order should you perform the actions? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Define input variables in the desktop flow.	
Create an instance of the Invoice processing AI Builder model.	
Define the logic in the desktop flow to write data to the CRM.	
Create a cloud flow that extracts information from the model and triggers the desktop flow.	
Create a desktop flow.	

Answer:

Explanation:

Answer Area

Create a desktop flow.
Define input variables in the desktop flow.
Define the logic in the desktop flow to write data to the CRM.
Create an instance of the Invoice processing AI Builder model.
Create a cloud flow that extracts information from the model and triggers the desktop flow.

- 1 - Create a desktop flow.
- 2 - Define input variables in the desktop flow.
- 3 - Define the logic in the desktop flow to write data to the CRM.
- 4 - Create an instance of the Invoice processing AI Builder model.
- 5 - Create a cloud flow that extracts information from the model and triggers the desktop flow.

NEW QUESTION # 119

A company hires you to develop a solution that helps the company manage new hires. Users will enter information about the new employee into an app and the app will save the information to a database.

The app must be simple to use and must rely on a data model. You must implement a workflow that automatically notifies the IT department when new employee records are created in the database.

You need to create the solution.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions
Create a cloud flow that is triggered when you create a new record in the Microsoft Dataverse table.
Create a worksheet in Microsoft Excel to store employee data.
Create a desktop flow that is triggered when you create a new record in the Microsoft Dataverse table.
Create a model-driven app.
Create a cloud flow that is triggered when a record is selected in the app.
Create a custom Microsoft Dataverse table to store employee data.

Answer:

Explanation:

Actions
Create a cloud flow that is triggered when you create a new record in the Microsoft Dataverse table.
Create a worksheet in Microsoft Excel to store employee data.
Create a desktop flow that is triggered when you create a new record in the Microsoft Dataverse table.
Create a model-driven app.
Create a cloud flow that is triggered when a record is selected in the app.
Create a custom Microsoft Dataverse table to store employee data.

Create a model-driven app.

Create a custom Microsoft Dataverse table to store employee data.

Create a cloud flow that is triggered when you create a new record in the Microsoft Dataverse table.

Explanation

Graphical user interface, text, application, email Description automatically generated

Answer Area Microsoft

Create a model-driven app.

Create a custom Microsoft Dataverse table to store employee data.

Create a cloud flow that is triggered when you create a new record in the Microsoft Dataverse table.

NEW QUESTION # 120

You need to configure the solution for the ERPDataOperations flow.

Which configuration values should you use? To answer, select the appropriate options in the answer area, NOTE: Each correct selection is worth one point.

Answer Area

Configuration setting

Type of trigger to use

Type of variables to use in the desktop flow to access credentials

When a new email arrives
When a new event is created
When a new row is created or modified
When a new item is created or modified

Set
Input
Output
Compose

Answer:

Explanation:

Answer Area Microsoft

Configuration setting

Type of trigger to use
