PL-600 Relevant Answers | PL-600 New Dumps Files

Nowadays, flexible study methods become more and more popular with the development of the electronic products. The latest technologies have been applied to our PL-600 actual exam as well since we are at the most leading position in this field. You can get a complete new and pleasant study experience with our PL-600 Study Materials. Besides, you have varied choices for there are three versions of our PL-600 practice materials. At the same time, you are bound to pass the PL-600 exam and get your desired certification for the validity and accuracy of our PL-600 study materials.

The Microsoft PL-600 Exam: Study Guide about the Microsoft certification exam and how to prepare for it

Smart Tips To Improve Your Microsoft PL-600 Exam preparation

Make Sure To Make The Right Choice When Facing Microsoft PL-600 Exam

The Microsoft PL-600 exam is for people who are part of solution architect teams designing and deploying cloud-hosted platform solutions. It is an MCSA certification that requires at least 3 years of hands-on experience designing and developing cloud-hosted platform solutions. **Microsoft PL-600 Dumps** includes all the topics that you need to prepare for the exam also our practice exams are your best choice to pass this certification. Then you don't have to waste your time on guessing or memorizing things, just download it now and get ready for the real Microsoft PL-600 exam. If you are a student who major in information technology, intends to change job, or just want to develop yourself, getting this certificate will be an important part of your work. How to prepare well for the Microsoft PL-600 Exam? Which study materials should you prepare? You can answer these questions by studying this article.

Microsoft PL-600 exam is a certification test that evaluates an individual's proficiency in developing and implementing Microsoft Power Platform solutions. PL-600 exam is essential for those who want to become a certified Microsoft Power Platform Solution Architect. PL-600 exam has been crafted to assess the candidates' ability to engage with stakeholders, translate business requirements into technical solutions, configure Power Apps, and build AI models. Successful candidates can design and implement custom solutions that exceed the standard capabilities of the Power Platform to meet customer business goals.

Microsoft Power Platform Solution Architect Sample Questions (Q64-Q69):

NEW QUESTION # 64

You need to propose a solution for form requirements.

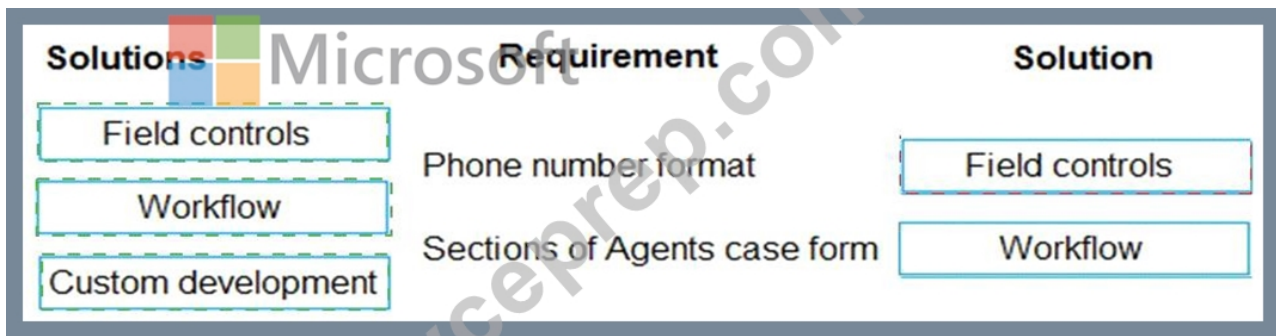

What should you recommend? To answer, drag the appropriate solutions to the correct requirements. Each solution may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Solutions	Requirement	Solution
Field controls	Phone number format	
Workflow	Sections of Agents case form	
Custom development		

Answer:

Explanation:

Explanation

Box 1: Field controls

You must standardize the format used by agents to enter customer phone numbers.

Box 2: Workflow

Log issues as cases. The case form must show variable sections based on the case type.

NEW QUESTION # 65

A company uses Microsoft Power Platform solutions.

The company plans to set up application lifecycle management (ALM) capabilities to store the solutions in source control, which will be used to automate the release process.

You need to set up the initial ALM infrastructure to store the solutions in source control.

Which four actions should you perform in sequence?

To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

- Run the pipeline.
- Create an Export pipeline.
- Create an Azure DevOps Project.
- Install the Microsoft Power Platform Build Tools.
- Create a Release pipeline.
- Add a task for Microsoft Power Platform Import Solution.

Steps

-
-

NEW QUESTION # 66

A company reports the following issues with an existing data management system.

Users cannot search for specific records by using a user-friendly ID or record identifier.

Users occasionally enter data into fields that is not required.

The record form displays all fields. Many of the fields are not used.

You need to ensure that the Power Platform solution will ensure data quality can be properly maintained. Which component should you use? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Requirement	Solution
Ensure that users can search for specific records by using a unique identifier.	▼ - Business rule - Autonumber column - Business process flow - Duplicate detection rule
You must prevent data entry into columns that do not require entry.	▼ - Business rule - Real time workflow - Business process flow - Duplicate detection rule

Answer:

Explanation:

Requirement	Solution
Ensure that users can search for specific records by using a unique identifier.	▼ - Business rule - Autonumber column - Business process flow - Duplicate detection rule
You must prevent data entry into columns that do not require entry.	▼ - Business rule - Real time workflow - Business process flow - Duplicate detection rule

Reference:

<https://docs.microsoft.com/en-us/powerapps/maker/data-platform/data-platform-create-business-rule>

NEW QUESTION # 67

You need to recommend a solution to meet user interface requirements. What should you recommend? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Requirement

Solution

Visual representation of gauge readings with minimum and maximum tolerances.

Create and embed a Power BI radial gauge.
Create and embed a custom visualization component.
Create and embed a standard Power Apps donut chart.

Add visibility to the manufacturing inspection records for onsite technicians.

Configure mobile offline synchronization.
Add an inspection order to the work order form
Modify the sitemap for Dynamics 365 Field Service.

Answer:

Explanation:

Requirement

Solution

Visual representation of gauge readings with minimum and maximum tolerances.

Create and embed a Power BI radial gauge.
Create and embed a custom visualization component.
Create and embed a standard Power Apps donut chart.

Add visibility to the manufacturing inspection records for onsite technicians.

Configure mobile offline synchronization.
Add an inspection order to the work order form
Modify the sitemap for Dynamics 365 Field Service.

Explanation:

Requirement	Solution
Visual representation of gauge readings with minimum and maximum tolerances.	Create and embed a Power BI radial gauge. Create and embed a custom visualization component. Create and embed a standard Power Apps donut chart.
Add visibility to the manufacturing inspection records for onsite technicians.	Configure mobile offline synchronization. Add an inspection order to the work order form Modify the sitemap for Dynamics 365 Field Service.

Box 1: Create and embed a Power BI radial gauge

A radial gauge chart has a circular arc and shows a single value that measures progress toward a goal or a Key Performance Indicator (KPI). The line (or needle) represents the goal or target value. The shading represents the progress toward that goal. The value inside the arc represents the progress value. Power BI spreads all possible values evenly along the arc, from the minimum (left-most value) to the maximum (right-most value).

In this example, you're a car retailer tracking the sales team's average sales per month. The needle represents a 140 cars sales goal. The minimum possible average sales is 0 and the maximum is 200. The blue shading shows that the team is averaging approximately 120 sales this month.

Box 2: Add an inspection order to the work order form

You can add inspections to work orders in Dynamics 365 Field Service.

Field Service inspections are digital forms that technicians use to quickly and easily answer a list of questions as part of a work order. The list of questions can include safety protocols, pass-and-fail tests for a customer asset, an interview with a customer, or other audits and assessments performed before, during, or after a work order.

Example:

Reference:

<https://docs.microsoft.com/en-us/power-bi/visuals/power-bi-visualization-radial-gauge-charts>

<https://docs.microsoft.com/en-us/dynamics365/field-service/inspections>

NEW QUESTION # 68

You are implementing a solution that includes applications which perform high-volume Microsoft Dataverse operations. The applications must not experience a loss of functionality or loss of performance due to service protection API limits. You need to evaluate metrics for the service protection API limits.

Which three metrics should you evaluate? Each correct answer part of the solution.

NOTE Each correct selection is worth one point.

- A. Number of API requests per connection.
- B. Amount of execution time that can be used for each connection.

- Answer: A,B,C**
