最新的 Salesforce App Builder Platform-App-Builder 免費考試真題 (Q127-Q132):

問題 #127

Universal Containers utilizes opportunities and a custom object called Detailed.Sales__c. The company would like to roll sales metrics up to an opportunity for only Detailed.Sales__c records that have their picklist status set to Active.

What is the recommended method for the app builder to achieve this request?

- A. Create a lookup relationship between the parent and child object with a roll-up summary field that filters on the status field.
- B. Utilize the AppExchange to download a third-party application that can roll up the sales dollars with the appropriate filter.
- C. Utilize Apex code to roll up the desired amounts.
- **D. Create a master-detail relationship between the parent and child object with a roll-up summary field that filters on the status field.**

答案: **D**

解題說明:

Explanation

Create a master-detail relationship between the parent and child object with a roll-up summary field that filters on the status field is the recommended method for the app builder to achieve the request of rolling up sales metrics to an opportunity for only Detailed.Sales__c records that have their picklist status set to Active.

According to the Salesforce documentation, "Roll-up summary fields calculate values from related records, such as those in a master-detail relationship." A roll-up summary field can filter on a field value of the child records and sum up only those records that match the criteria. Utilize the AppExchange to download a third-party application that can roll up the sales dollars with the appropriate filter, create a lookup relationship between the parent and child object with a roll-up summary field that filters on the status field, and utilize Apex code to roll up the desired amounts are not valid or necessary methods for this request.

問題 #128

At Universal Containers, the VP of Service has requested a visual indicator flag on each case, based on the case priority. High-priority cases should be flagged red, medium-priority should be flagged yellow, and low-priority cases should be flagged green. Which formula would accomplish this requirement? Choose 2 answers

- **A. CASE(Priority, "Low", "img/samples/flag_green.gif", "Medium", "img/samples/flag_yellow.gif", "High", "img/samples/flag_red.gif", "/s.gif")**
- B. IMAGE(IF(ISPICKVAL(Priority, "Low"), "img/samples/flag_green.gif", IF(ISPICKVAL(Priority, "Medium"), "img/samples/flag_yellow.gif", IF(ISPICKVAL(Priority, "High"), "img/samples/flag_red.gif"))), "Priority Flag")
- C. IF (ISPICKVAL(Priority, "Low"), "img/samples/flag_green.gif", IF(ISPICKVAL(Priority, "Medium"), "img/samples/flag_yellow.gif", IF(ISPICKVAL(Priority, "High"), "img/samples/flag_red.gif", "/s.gif")))
- **D. IMAGE (CASE(Priority, "Low", "img/samples/flag_green.gif", "Medium", "img/samples/flag_yellow.gif", "High", "img/samples/flag_red.gif", "Priority Flag"))**

答案: **A,D**

解題說明:

The formula for creating a visual indicator flag on each case based on the case priority should use the IMAGE and CASE functions. The IMAGE function returns an image for a given URL, and the CASE function evaluates an expression and returns a value based on that expression. Option A and D use these functions correctly, while option B and C do not.
