PMI Agile Certified Practitioner Sample Questions (Q267-Q272):

NEW QUESTION # 267
In Sprint Planning, the development team estimates User Stories provided by the Product Owner and agrees to ones that can be completed in the Sprint. This is an example of:

- A. Universal Acceptance
- B. Tacit Agreement
- C. Reciprocal Commitment
- D. Osmotic Communication

Answer: C

NEW QUESTION # 268
A project team meets to estimate user stories for a sprint. While an important non-functional requirement must be delivered in the sprint, the estimate exceeds sprint capacity.

What should the team do?

- A. Add team resources
- B. Refer the issue to the product owner
- C. Break non-functional requirements into those that can be delivered in the given sprint
- D. Estimate only functional requirements that will impact product quality

Answer: C

Explanation:
The correct answer is D - Break non-functional requirements into those that can be delivered in the given sprint. Agile teams apply the principle of incremental and iterative delivery not only to functional requirements but also to non-functional ones. Large or complex work-including non-functional requirements-should be decomposed into smaller, manageable items.
From the PMI Agile Practice Guide:
"Work items, including non-functional requirements, should be split to fit within a sprint's capacity. Teams use story-splitting techniques and prioritize parts that provide the most value or enable further development." (PMI Agile Practice Guide, Section 5.3 - Adaptive Planning and Story Sizing) Mike Griffiths reinforces:
"If a user story or requirement is too large for a sprint, it should be broken down. Even performance and security requirements can often be delivered incrementally." (Mike Griffiths, PMI-ACP Exam Prep, Chapter 5 - Adaptive Planning) Incorrect options:
* A ignores important non-functional quality attributes.
* B is not in line with agile's sustainable pace and team stability.
* C deflects ownership without attempting a solution.

NEW QUESTION # 269
A team identifies the number of threats and lists them in the order in which they were identified. After analyzing a cause-and-effect diagram, the ownership of the threats and their treatment is assigned, and a number of risk cards are places on the Kanban board. What approach should be used to manage these threats?

- A. Prioritize the risks based on their critically and timing, and track actions to closure
- B. Focus on the threats during the daily stand up and ensure they are visible to the entire team and other interested parties
- C. Create a risk register detailing the threats, their causes, and their treatment strategies; and complete ownership to provide tighter risk control and a stakeholder communication tool
- D. Ensure that the prioritization of threats is complete, and that ownership actions are assigned and visible to everyone

Answer: D

NEW QUESTION # 270
An agile team provides feedback that user stories include insufficient details to understand the requirements.
What should the agile practitioner do?

- A. Coach the product owner to update only the acceptance criteria.
- B. Instruct the agile team to fix the user stories during the next retrospective.
- C. Facilitate a user story workshop with the agile team.
- D. Inform the product owner's manager that the work items provide insufficient detail.
