

PMI PMI-RMP Fragen und Antworten, PMI Risk Management Professional Prüfungsfragen

Außerdem sind jetzt einige Teile dieser ZertSoft PMI-RMP Prüfungsfragen kostenlos erhältlich: <https://drive.google.com/open?id=1E8wmJaFSIB0rP8ZxHykpwwBMW2gSSrsA>

Wie können Sie die Gültigkeit der virtuelle Produkte wie PMI PMI-RMP Prüfungssoftware empfinden, bevor Sie sie kaufen? Wir bieten Sie die Demo der PMI PMI-RMP Prüfungssoftware. Sie können die Demo auf unserer Website direkt kostenlos downloaden. Wenn Sie Fragen haben, kontaktieren Sie uns online oder mit dem E-Mail. Wir ZertSoft auszuwählen bedeutet, dass Sie ein einfacher Weg zum Erfolg bei der PMI PMI-RMP Prüfung wählen!

Um zur PMI-RMP-Zertifizierungsprüfung zugelassen zu werden, müssen Kandidaten bestimmte Bildungs- und Erfahrungsanforderungen erfüllen. Sie müssen mindestens einen High-School-Abschluss oder einen gleichwertigen Abschluss, mindestens 4.500 Stunden Erfahrung im Projekt-Risikomanagement und 40 Stunden Bildung im Projekt-Risikomanagement haben. Alternativ benötigen Kandidaten mit einem Bachelor-Abschluss oder höher nur 3.000 Stunden Erfahrung im Projekt-Risikomanagement und 30 Stunden Bildung im Projekt-Risikomanagement.

Die PMI PMI-RMP Zertifizierungsprüfung ist eine hoch angesehene und weltweit anerkannte Zertifizierung im Bereich des Risikomanagements. Sie ist für Personen konzipiert, die Erfahrung im Projekt-Risikomanagement haben und ihr Risikomanagement-Fähigkeiten entwickeln und verbessern möchten. Die Prüfung deckt eine breite Palette von Themen im Zusammenhang mit dem Risikomanagement ab, und Personen, die die Prüfung erfolgreich bestehen, erhalten ein Zertifikat, das für drei Jahre gültig ist.

ZertSoft versprechen, dass wir keine Mühe scheuen, um Ihnen zu helfen, die PMI PMI-RMP Zertifizierungsprüfung zu bestehen. Jetzt können Sie kostenlos einen Teil der Fragen und Antworten von PMI PMI-RMP Zertifizierungsprüfung (PMI Risk Management Professional) auf ZertSoft downloaden. Wenn Sie ZertSoft wählen, können Sie nicht nur die PMI PMI-RMP Zertifizierungsprüfung bestehen, sondern auch über einen einjährigen kostenlosen Update-Service verfügen. ZertSoft versprechen, wenn Sie die Prüfung nicht bestehen, zahlen wir Ihnen die gesamte Summe zurück.

PMI Risk Management Professional PMI-RMP Prüfungsfragen mit Lösungen (Q186-Q191):

186. Frage

You are the project manager of the NNH project. In this project you have created a contingency response that the cost performance index should be less than 0.93. The NHH project has a budget at completion of \$945,000 and is 45 percent complete - though the project should be 49 percent complete. The project has spent \$455,897 to reach the 45 percent complete milestone. What is the project's cost performance index?

- **A. 0.93**
- B. 0.92
- C. -\$30,647
- D. 1.06

Antwort: A

187. Frage

The project manager has completed four projects all with similar scope. The project manager has recently been assigned to start on a new project and believes some risks may occur again on this project. What should the project manager do?

- A. Implement the risk response strategies into the risk plan.
- B. Add the risks to the risk register and determine a contingency.
- C. Inform the sponsor that these risks should be added according to experience.
- **D. Discuss and evaluate the identified risks with the project team.**

Antwort: D

Begründung:

Explanation

The project manager should discuss the identified risks with the project team to ensure that everyone is aware of the potential risks and can provide input on the likelihood and impact of each risk. This collaborative approach will help in developing a comprehensive risk management plan.

The project manager should discuss and evaluate the identified risks with the project team, as this is part of the risk identification process. The project manager can use their experience from previous projects to identify potential risks that may occur again on the new project, but they should also involve the project team to obtain their input and perspectives. The project team can help the project manager to validate, refine, and prioritize the identified risks, as well as to suggest possible risk responses. The project manager should document the identified risks and their characteristics in the risk register, which is a tool for risk management. The other options are not appropriate actions for the project manager to take. Implementing the risk response strategies into the risk plan is premature, as the project manager should first analyze and evaluate the risks before deciding on the best response strategies.

Informing the sponsor that these risks should be added according to experience is not sufficient, as the project manager should also consult the project team and other stakeholders to ensure that all relevant risks are identified and assessed. Adding the risks to the risk register and determining a contingency is part of the risk analysis and response planning processes, which come after the risk identification process. The project manager should first discuss and evaluate the identified risks with the project team before moving to the next steps of risk management. References: 2, 3, [5]

188. Frage

A certain risk is identified for a major project, and the risk response is planned. However, the analysis reveals a high probability for a secondary risk which will be tolerated based on the organization's risk thresholds. The secondary risk is subsequently registered. During project execution, the primary risk occurs, the planned action is taken, and the secondary risk emerges. What two actions should the risk owner take? (Choose two.)

- **A. Update and communicate assessments of the secondary risk's impact.**
- B. Engage the project manager to authorize the secondary risk's response.
- C. Set the corresponding trigger conditions to the secondary risk.
- D. Conduct meeting with all stakeholder to agree on post impact solutions.
- **E. Implement the secondary risk response and update the project documents.**

Antwort: A,E

Begründung:

The risk owner should implement the secondary risk response, as it is now being tolerated, and update the project documents accordingly. They should also update and communicate the assessments of the secondary risk's impact to ensure everyone is aware of the situation.

According to the PMI-RMP Handbook1, the risk owner is responsible for implementing the risk response plan and monitoring the risk and its secondary risks. Therefore, the risk owner should take the following two actions when the secondary risk emerges: Implement the secondary risk response and update the project documents. This action is consistent with the risk response strategy of tolerance, which means accepting the risk and its consequences. The risk owner should execute the planned response for the secondary risk, such as contingency plans or fallback plans, and update the relevant project documents, such as the risk register, the risk report, and the lessons learned register, to reflect the current status and impact of the risk.

Update and communicate assessments of the secondary risk's impact. This action is consistent with the risk monitoring and control process, which involves tracking the identified risks, evaluating their impact and probability, and reporting the risk information to the appropriate stakeholders. The risk owner should reassess the secondary risk's impact on the project objectives, such as scope, schedule, cost, and quality, and communicate the results to the project manager and other relevant stakeholders, such as the sponsor, the customer, and the team members.

PMBOK Guide, 6th edition, Chapter 11: Project Risk Management2

189. Frage

During a brainstorming session, a stakeholder identifies a risk that, if realized, could greatly impact their team. The stakeholder insists that this particular risk should be mitigated to the greatest extent possible, however, the majority of other stakeholders feel that different risks have higher probabilities of occurring.

Which action should the risk manager take to address this risk?

- A. Escalate the identified risk to the project sponsor and allow them to determine the best course of action.
- **B. Add the identified risk to the risk register for future probability and impact analysis.**
- C. Accept the identified risk because other stakeholders feel that there are higher priority risks to address.
- D. Mitigate the identified risk in order to reduce the probability of impacting the stakeholder's team.

Antwort: B

Begründung:

Adding the identified risk to the risk register is the best action that the risk manager can take to address this risk. The risk register is a document that records the identified risks, their characteristics, their status, and their responses. By adding the risk to the risk register, the risk manager can ensure that the risk is not overlooked or ignored, and that it will be subjected to further probability and impact analysis to determine its priority and response strategy. Accepting the identified risk because other stakeholders feel that there are higher priority risks to address is not a good practice, as it may lead to overlooking a potentially significant risk that could affect the stakeholder's team. Mitigating the identified risk in order to reduce the probability of impacting the stakeholder's team is not advisable, as it may be a premature or unnecessary action without proper analysis of the risk probability and impact. Escalating the identified risk to the project sponsor and allowing them to determine the best course of action is not appropriate, as it may be an overreaction or a sign of lack of competence from the risk manager, who should be able to handle the risk identification and analysis process. 190. Frage

During a project progress meeting, a project team member is concerned that one of the risks has triggered several other low-level risks. These risks should be responded to quickly or there will be severe consequences for the project deliverables.

What should the risk manager do?

- A. Initiate a risk response when these risks occur.
- B. Update the watchlist.
- **C. Perform a risk urgency assessment.**
- D. Address only the high-priority risk.

Antwort: C

Begründung:

When a risk triggers several other risks that need a quick response, performing a risk urgency assessment is the appropriate course of action. This assessment helps determine how soon a response is required for each risk, considering their potential impact on the project. The PMI guidelines emphasize the importance of urgency in prioritizing risk responses, particularly when the consequences could significantly affect project deliverables if not addressed promptly.
