Our 300-715 practice guide well received by the general public for immediately after you have made a purchase for our 300-715 exam prep, you can download our 300-715 study materials to make preparations for the exams. It is universally acknowledged that time is a key factor in terms of the success of exams. The more time you spend in the preparation for 300-715 Learning Engine, the higher possibility you will pass the exam.

Cisco 300-715 certification exam is a 90-minute exam that consists of 60-70 questions. 300-715 exam is available in English and Japanese and can be taken at any Pearson VUE testing center worldwide. Candidates who pass the exam receive the Cisco Certified Network Professional Security (CCNP Security) and Cisco Certified Specialist - Identity Management Implementation certifications, which validate their ability to implement and manage Cisco ISE solutions.

In addition to the technical knowledge required to pass the exam, candidates must also possess strong analytical and problem-solving skills. They must be able to analyze complex network access control scenarios and determine the appropriate ISE configuration to meet the organization's security requirements. Overall, the Cisco 300-715 Exam is a challenging and rewarding certification that demonstrates an IT professional's expertise in implementing and configuring Cisco Identity Services Engine.

NEW QUESTION # 222

An administrator must enable scanning for specific endpoints when they attempt to access the network. The scanning must be triggered as a result of successful authentication. Which action accomplishes this task?

- A. Configure the endpoint scanning probe to profile the endpoint correctly and assign it a risk score.
- **B. Create an authorization profile with scanning enabled and add it to the authorization policy that the endpoints will hit.**
- C. Add an entry in the authentication conditions to allow only scanned endpoints access, then redirect everything else to the portal to initiate the scan.
- D. Modify the authorization policy to send init_endpoint_scan as a result to the authenticator.

Answer: B

NEW QUESTION # 223

A network administrator is configuring client provisioning resource policies for client machines and must ensure that an agent pop-up is presented to the client when attempting to connect to the network. Which configuration item needs to be added to allow for this?

- A. an API connection back to the client
- B. the client provisioning URL in the authorization policy
- C. a temporal agent that gets installed onto the system
- **D. a remote posture agent proxying the network connection**

Answer: D

NEW QUESTION # 224

What must be configured on the Cisco ISE authentication policy for unknown MAC addresses/identities for successful authentication?

- **A. continue**
- B. pass
- C. drop
- D. reject

Answer: A

Explanation
