

Practice Amazon ANS-C01 Questions | Latest Study ANS-C01 Questions

P.S. Free & New ANS-C01 dumps are available on Google Drive shared by ExamPrepAway: https://drive.google.com/open?id=1gYPFWLsFr_r9nUPFO4guWWflaeBHI1k4

Our ExamPrepAway ANS-C01 certification exam information is suitable for all IT certification ANS-C01 exam. Its usability is fit for various fields of IT. ExamPrepAway's ANS-C01 exam certification training materials is worked out by senior IT specialist team through their own exploration and continuous practice. Its authority is undoubtdul. If there is any quality problem of ANS-C01 Exam Dumps and answers you buy or you fail ANS-C01 certification exam, we will give full refund unconditionally

Amazon ANS-C01 (AWS Certified Advanced Networking Specialty) Exam is a certification exam designed to validate the advanced networking skills of AWS professionals. With this certification, individuals can demonstrate their expertise in designing, deploying, and managing AWS-based networking solutions. The ANS-C01 exam covers a broad range of topics related to advanced networking in the AWS environment, and candidates are required to have hands-on experience with AWS networking services in order to successfully pass the exam.

To successfully pass the ANS-C01 Exam, candidates must have a thorough understanding of AWS networking concepts and best practices. They must also be able to design and implement complex networking solutions that meet the needs of their organization. ANS-C01 exam consists of 65 multiple-choice and multiple-response questions, and candidates have 170 minutes to complete it.

Excellent Practice ANS-C01 Questions, Latest Study ANS-C01 Questions

If you have aspiration to be an IT specialist with considerable salary and work in big company, our Amazon exam dumps will make your dream closer. You just need to prepare ANS-C01 real questions with one or two days and we will give your support in every steps of your IT test preparation if you have any problems and doubts to our ANS-C01 PdfTorrent.

Amazon ANS-C01 is an exam that is aimed at validating the advanced networking skills of professionals. AWS Certified Advanced Networking Specialty Exam certification is designed to test your knowledge and skills in designing and deploying complex networking solutions in the AWS ecosystem. It is a prestigious certification that demonstrates your expertise in networking and AWS technologies.

Amazon AWS Certified Advanced Networking Specialty Exam Sample Questions (Q160-Q165):

NEW QUESTION # 160

A company wants to use thin clients running virtual desktops to replace 500 desktop computers used by its call center employees. The company is evaluating Amazon WorkSpaces as a solution.

A network engineer who is testing with a thin client is unable to connect to Amazon WorkSpaces. After entering credentials, the network engineer receives the following error: "An error occurred while launching your WorkSpace. Please try again." What should the network engineer do to resolve this issue?

Response:

- A. Update the company's corporate firewall to allow outbound access to UDP on port 4172 and TCP on port 4172. Open inbound ephemeral ports explicitly to allow return communication
- B. Update the company's corporate firewall to allow inbound access to UDP on port 4172 and TCP on port 4172. Open outbound ephemeral ports explicitly to allow return communication
- **C. Update the inbound rules on the security group assigned to Amazon WorkSpaces to allow UDP on port 4172 and TCP on port 4172**
- D. Update the inbound rules on the network ACL on the subnets used for Amazon WorkSpaces to allow UDP on port 4172 and TCP on port 4172.

Answer: C

NEW QUESTION # 161

A company has deployed an AWS Network Firewall firewall into a VPC. A network engineer needs to implement a solution to deliver Network Firewall flow logs to the company's Amazon OpenSearch Service (Amazon Elasticsearch Service) cluster in the shortest possible time.

Which solution will meet these requirements?

- A. Configure flow logs for the firewall. Set the Amazon OpenSearch Service (Amazon Elasticsearch Service) cluster as the destination for the Network Firewall flow logs.
- **B. Create an Amazon Kinesis Data Firehose delivery stream that includes the Amazon OpenSearch Service (Amazon Elasticsearch Service) cluster as the destination. Configure flow logs for the firewall Set the Kinesis Data Firehose delivery stream as the destination for the Network Firewall flow logs.**
- C. Create an Amazon Kinesis data stream that includes the Amazon OpenSearch Service (Amazon Elasticsearch Service) cluster as the destination. Configure flow logs for the firewall. Set the Kinesis data stream as the destination for the Network Firewall flow logs.
- D. Create an Amazon S3 bucket. Create an AWS Lambda function to load logs into the Amazon OpenSearch Service (Amazon Elasticsearch Service) cluster. Enable Amazon Simple Notification Service (Amazon SNS) notifications on the S3 bucket to invoke the Lambda function. Configure flow logs for the firewall. Set the S3 bucket as the destination.

Answer: B

Explanation:

<https://aws.amazon.com/blogs/networking-and-content-delivery/how-to-analyze-aws-network-firewall-logs-using-amazon-opensearch-service-part-1/>

NEW QUESTION # 162

Your company has deployed a bursty web application to AWS and would like to improve the user experience. It is important for only the web host to have the private key for Transport Layer Security (TLS), so the Classic Load Balancer has a listener on Transmission Control Protocol (TCP) port 443.

What are some approaches that you can use to reduce latency and improve the scale-out process for the application?

Response:

- A. Use Amazon Certificate Manager (ACM) to distribute new certificates to Amazon CloudFront to accomplish handling content at the edge.
- **B. Use a Network Load Balancer in front of your application to increase network performance.**
- C. Use an Application Load Balancer in front of the application, enabling better utilization of multiple target groups with different HTTP paths and hosts.
- D. Configure enhanced networking on the Classic Load Balancer for lower latency load balancing.

Answer: B

NEW QUESTION # 163

Amazon Route 53 uses several methods to deliver a 100 percent availability Service Level Agreement (SLA). Which method guards against failures of Top Level Domain (TLD) servers?

Response:

- A. Latency routing
- **B. Anycast striping**
- C. Routing policies
- D. TLD replication and backup

Answer: B

NEW QUESTION # 164

The team responsible for web application development is concerned about malicious behavior emanating from 200 random IP addresses. Which step will assure this sort of threat's security and scalability?

Response:

- **A. Use inbound network ACL rules to block the IP addresses**
- B. Use AWS WAF to block the IP addresses
- C. Write iptables rules on the instance to block the IP addresses
- D. Use inbound security group rules to block the IP addresses

Answer: A

NEW QUESTION # 165
