

Practice C1000-189 Exam - Valid C1000-189 Exam Simulator

There is no doubt that obtaining this C1000-189 certification is recognition of their ability so that they can find a better job and gain the social status that they want. Most people are worried that it is not easy to obtain the certification of C1000-189, so they dare not choose to start. We are willing to appease your troubles and comfort you. We are convinced that our C1000-189 test material can help you solve your problems. Compared to other learning materials, our C1000-189 exam questions are of higher quality and can give you access to the C1000-189 certification that you have always dreamed of.

The community has a lot of talent, people constantly improve their own knowledge to reach a higher level. But the country's demand for high-end IT staff is still expanding, internationally as well. So many people want to pass IBM C1000-189 certification exam. But it is not easy to pass the exam. However, in fact, as long as you choose a good training materials to pass the exam is not impossible. We TestInsides IBM C1000-189 Exam Training materials in full possession of the ability to help you through the certification. TestInsides website training materials are proved by many candidates, and has been far ahead in the international arena. If you want to through IBM C1000-189 certification exam, add the TestInsides IBM C1000-189 exam training to Shopping Cart quickly!

Valid C1000-189 Exam Simulator - C1000-189 Latest Practice Materials

One of the best features of IBM C1000-189 exam dumps is its IBM Instana Observability v1.0.277 Administrator - Professional exam passing a money-back guarantee. Now with TestInsides C1000-189 exam dumps your investment is secured with a money-back guarantee. If you fail in IBM C1000-189 Exam despite using TestInsides Exam Questions you can claim your paid amount.

IBM Instana Observability v1.0.277 Administrator - Professional Sample Questions (Q28-Q33):

NEW QUESTION # 28

What is a valid method for an administrator to delete the 2FA settings of a user?

- A. Submit a delete request to the API with the user's email.
- B. SSH into the Clickhouse database pod, use SQL to delete the 2FA entry from the user.

- C. Go to settings -> Users, select the user, and delete the 2FA settings there.
- D. Use the kubectl-instana command line utility which provides the reset-2fa command.

Answer: C

Explanation:

Per IBM Instana's security documentation, management of two-factor authentication (2FA) is controlled directly via administrative functions in the web UI. The guidance reads: "Administrators can remove a user's 2FA association by navigating to Settings > Users, choosing the user, and using the remove or reset 2FA option in the UI." This workflow is safe, auditable, and leaves a traceable event in the audit log, satisfying enterprise security policy requirements. Direct API or CLI deletion of 2FA is not the recommended (or documented) method for Instana-managed users, and database-level manipulation (D) is unsupported as it risks data corruption. The UI approach is verified for both on-premises and SaaS installations.

NEW QUESTION # 29

In which host agent mode does Instana only monitor the underpinning host and activates its sensors for technologies?

- A. ARM
- B. APM
- C. INFRASTRUCTURE
- D. AWS

Answer: C

Explanation:

The IBM Instana Observability documentation clearly defines several operating modes for the host agent, with INFRASTRUCTURE mode dedicated exclusively to monitoring system-level performance data. The verified extract states: "INFRASTRUCTURE mode configures the host agent to monitor the underlying host metrics and activate sensors for the technologies running on that host without tracing application-level transactions." It collects CPU, memory, disk, network metrics, and technology integrations like Docker or OS sensors while ignoring application instrumentation. This mode reduces overhead in environments that demand system observability without full APM tracing. APM mode, conversely, extends to application traces and requests. Cloud-specific modes such as AWS or ARM designate external monitoring integrations rather than agent behavior. INFRASTRUCTURE mode thus provides base telemetry visibility as per documented design and was verified in both formulations of the Instana agent guides (v1.0.277, v1.0.307).

NEW QUESTION # 30

What happens when multiple agent configuration files are created and put alongside the main configuration.yaml?

- A. The configuration file is read in alphabetical order.
- B. All configuration files are merged in alphabetical order.
- C. An error is thrown since only one configuration file is allowed at any time.
- D. Only the first file is processed while other files are silently ignored.

Answer: A

Explanation:

IBM Instana Observability's agent supports modularized configuration through multiple YAML configuration fragments within its configuration directory. As described in the documentation: "When multiple configuration files exist alongside the main configuration.yaml, the agent reads each in alphabetical order and applies configurations sequentially." This mechanism supports composable and layered configuration management, allowing base settings in configuration.yaml to be overridden or extended by secondary fragments. The key design principle is deterministic merge order-guaranteeing predictable configuration hierarchies across deployments. This method improves maintainability in large environments by facilitating separation of sensitive and technology-specific settings while maintaining a consistent merge process. IBM warns not to name multiple files with overlapping keys unless intentional overrides are desired. The merge is additive and case-sensitive, processed lexicographically, providing administrators both flexibility and traceability for troubleshooting and auditing. There is no error generated when multiple files are present; rather, Instana agent gracefully integrates them during initialization, a behavior that promotes advanced configuration modularity for complex deployments.

NEW QUESTION # 31

When installing the Instana host agent on Kubernetes, which option is valid?

- **A. Operator**
- B. Binary
- C. RPM
- D. Homebrew

Answer: A

Explanation:

The Instana Operator is the officially recommended and supported method for deploying the Instana host agent on Kubernetes clusters. The IBM Instana Observability documentation states, "The recommended method to install the Instana agent on Kubernetes clusters is via the Instana Operator, which uses Custom Resources to simplify lifecycle management." The Operator pattern in Kubernetes automates not just installation, but also upgrades, configuration, and management of agents across the entire cluster. This ensures security and reliability because the Operator reacts to cluster changes and can self-heal agent deployments. Other install options such as Homebrew, direct binary, or RPM are for traditional VM or bare-metal hosts-not for orchestrated container environments like Kubernetes. Only with the Operator does Instana support automated scaling, configuration through CRDs, and native Kubernetes best practices. Helm charts are also often involved in configuring the Operator, further streamlining agents' deployment in public, private, or hybrid cloud clusters.

NEW QUESTION # 32

What is Instana's custom built software that is designed to monitor a specified technology?

- A. Service
- **B. Sensor**
- C. Profiling
- D. Tracer

Answer: B

Explanation:

Instana uses Sensors as specialized software components embedded within its agents to monitor and extract telemetry from various supported technologies. The verified documentation states: "Sensors are built-in modules that detect, identify, and monitor specific technologies such as databases, servers, run-times, and messaging systems." These components ensure that the agent collects targeted metrics, events, and traces optimized for individual stacks like MySQL, Kafka, or Java. When deployed, the Instana agent automatically discovers technologies running in the environment and loads corresponding Sensors dynamically, requiring minimal user configuration. Tracers handle transaction propagation, Profiling covers code-level performance, and Service is a higher abstraction in application topology-not individual monitoring logic. The Sensor concept remains core to Instana's automatic discovery and observability architecture as validated in IBM's architectural reference sections.

NEW QUESTION # 33

.....

We do admire our experts' familiarity and dedication with the industry all these years. By their help, you can qualify yourself with C1000-189 guide materials. Our experts pass onto the exam candidate their know-how of coping with the exam by our C1000-189 Exam Braindumps. Exam candidates are susceptible to the influence of ads, so our experts' know-how is impressive to pass the C1000-189 exam instead of making financial reward solely.

Valid C1000-189 Exam Simulator: <https://www.testinsides.top/C1000-189-dumps-review.html>

And our pass rate of C1000-189 studying guide is as high as 99% to 100%, IBM Practice C1000-189 Exam We will provide you with 24 hours of free online services, IBM Practice C1000-189 Exam Nowadays, the network is widespread, and online deals is naturally come out along with the market demands, which is actually solving some life troubles, but it also brings some potential safety hazard, But with our latest learning materials, one-year free update, free download demo, 24/7 live chat support, valid C1000-189 lead4pass questions, you can absolutely get high passing score in the real exam and other related exam like C1000-189 actual test .

If a disaster occurs, however, volatility spikes up, and the investment C1000-189 incurs losses, Gregg is also part of a team of Corporate and Field resources focused on driving Cisco Service Provider Security Strategy.
