CompTIA Data+ Exam (2025) Sample Questions (Q61-Q66):

NEW QUESTION # 61

Which of the following elements is the most important to include in a dashboard for internal technical audiences?

- A. Dynamic features
- B. Key performance indicators
- C. Company branding
- D. Methodology section

Answer: B

Explanation:

This question pertains to the Visualization and Reporting domain, focusing on dashboard design for specific audiences. Internal technical audiences (e.g., data analysts, IT staff) need actionable, data-driven insights.

* Methodology section (Option A): Methodology is important for research reports, not dashboards, especially for technical

audiences who prioritize data.

* Dynamic features (Option B): Dynamic features (e.g., interactivity) are useful but not the most critical element for technical audiences.

* Key performance indicators (Option C): KPIs provide critical metrics (e.g., system uptime, error rates) that technical audiences need to monitor and act on, making this the most important element.

* Company branding (Option D): Branding is more relevant for external audiences, not internal technical ones.

The DA0-002 Visualization and Reporting domain emphasizes "translating business requirements to form the appropriate visualization," and KPIs are essential for technical dashboards.

NEW QUESTION # 62

A data analyst wants to understand several datasets at the variable level. Which of the following should the analyst consult to find this information?

- A. Data flow diagram
- **B. Data dictionary**
- C. Data versioning
- D. Data lineage

Answer: B

Explanation:

This question pertains to the Data Concepts and Environments domain, focusing on documentation for understanding datasets. The analyst needs variable-level details (e.g., field definitions), which points to a specific type of documentation.

* Data lineage (Option A): Data lineage tracks data flow and transformations, not variable definitions.

* Data dictionary (Option B): A data dictionary provides detailed information about variables (e.g., name, type, description), which is exactly what the analyst needs.

* Data flow diagram (Option C): A data flow diagram shows data movement, not variable-level details.

* Data versioning (Option D): Data versioning tracks changes to datasets, not variable definitions.

The DA0-002 Data Concepts and Environments domain includes understanding "data schemas and dimensions," and a data dictionary is the primary tool for variable-level information.

NEW QUESTION # 63

Which of the following pieces of information, if made public, results in a data privacy violation?

- **A. Driver's license**
- B. Employment status
- C. Gender
- D. Age

Answer: A

Explanation:

This question falls under the Data Governance domain, which in DA0-002 includes understanding data privacy and compliance with regulations like GDPR. The question asks which piece of information, if made public, constitutes a privacy violation, meaning it must be personally identifiable information (PII).

* Gender (Option A): Gender is not typically considered PII on its own, as it's not uniquely identifiable.

* Driver's license (Option B): A driver's license number is PII because it uniquely identifies an individual and can be linked to other personal information, such as name and address. Making it public violates privacy regulations.

* Age (Option C): Age alone isn't PII, as it's not uniquely identifiable.

* Employment status (Option D): Employment status (e.g., employed, unemployed) isn't PII, as it doesn't uniquely identify an individual.

The DA0-002 Data Governance domain includes "identifying PII and data privacy concepts," and a driver's license is a clear example of PII that, if exposed, results in a privacy violation.

NEW QUESTION # 64

A data analyst is working on an initial analysis of the dataset in the following table:

DateTime	Count
2024-01-01	12
2024-01-02	245
2024-01-02	13
2024-01-03	13
2024-01-03	12
00:00:00	12

Which of the following issues should the analyst flag in the data report?

- A. Completeness
- **B. Outlier**
- C. Duplication
- D. Mismatch

Answer: B

Explanation:

This question falls under the Data Analysis domain, focusing on identifying data quality issues. The table shows counts over time, and the analyst needs to flag an issue in the data.

* Completeness (Option A): Completeness refers to missing data, but all rows have values for DateTime and Count.

* Outlier (Option B): The count of 245 on 2024-01-02 is significantly higher than other counts (12-13), indicating an outlier that should be investigated for accuracy.

* Mismatch (Option C): Mismatch implies inconsistent data types or formats, but the DateTime and Count columns appear consistent except for the last row (addressed separately).

* Duplication (Option D): Duplication refers to identical rows, but no rows are identical (same DateTime and Count).

The last row ("00:00:00", 12) has a formatting issue, but the most significant issue for analysis is the outlier (245), as it could skew results. The DA0-002 Data Analysis domain includes "applying the appropriate descriptive statistical methods," such as identifying outliers in datasets.

Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 3.0 Data Analysis.

NEW QUESTION # 65

A data analyst pulls a table similar to the following one:

ID	Type
TypeID	Phone
1	Full Time
Full Time 1	Mobile
2	Part Time
Part Time 2	Work
3	Full Time
Full Time 3	Mobile

Which of the following best explains the data issue with TypeID?

- **A. Redundancy**

- B. Missing data
- C. Duplication
- D. Outlier

Answer: A

Explanation:

This question is part of the Data Concepts and Environments domain, focusing on identifying data quality issues. The table shows Type and TypeID columns, where TypeID seems to repeat information from Type with an additional identifier.

* Redundancy (Option A): The TypeID column (e.g., "Full Time 1") redundantly includes the Type value ("Full Time") with an extra identifier, which is unnecessary and could be simplified by using a numeric ID instead.

* Outlier (Option B): Outliers are data points that deviate significantly, which isn't applicable here.

* Missing data (Option C): There are no missing values in the table.

* Duplication (Option D): Duplication refers to identical rows, but the rows here are unique; the issue is with the column content.

The DA0-002 Data Concepts and Environments domain includes understanding "data schemas and dimensions," and redundancy is a common data quality issue in schema design.
