

# Practice Oracle 1z0-076 Exam Questions in Your Preferred Format with PrepAwayETE

## Oracle 1Z0-076 Exam Prep Made Easy: The Benefits of Using Practice Tests

P.S. Free 2025 Oracle 1z0-076 dumps are available on Google Drive shared by PrepAwayETE: [https://drive.google.com/open?id=1CxActYNDad-OhguFHRbb\\_T3\\_bbIM8FDb](https://drive.google.com/open?id=1CxActYNDad-OhguFHRbb_T3_bbIM8FDb)

The Oracle 1z0-076 exam questions are being updated on a regular basis. As you know the 1z0-076 exam syllabus is being updated on a regular basis. To add all these changes in the 1z0-076 exam dumps we have hired a team of exam experts. They regularly update the Oracle 1z0-076 Practice Questions as per the latest Oracle 1z0-076 exam syllabus. So you have the option to get free 1z0-076 exam questions update for up to 1 year from the date of Oracle 1z0-076 PDF dumps purchase.

## Oracle 1z0-076 Exam Syllabus Topics:

Topic	Details
Topic 2	<ul style="list-style-type: none"><li>Enhanced Client Connectivity in a Data Guard Environment: This topic focuses on enhancing client connectivity in a Data Guard setup and implementing failover procedures for seamless client redirection. It also covers application continuity to ensure uninterrupted operations during role transitions.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Backup and Recovery Considerations in an Oracle Data Guard Configuration: In this topic, Backup and recovery procedures in a Data Guard configuration are discussed, including RMAN backups, offloading to physical standby, and network-based recovery.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Managing Oracle Net Services in a Data Guard Environment: The section focuses on Oracle Net Services and its role in Data Guard networking setup.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>Creating a Data Guard Broker Configuration: This section delves into the practical aspects of creating and managing a Data Guard broker configuration, including command-line and Enterprise Manager approaches.</li></ul>
Topic 6	<ul style="list-style-type: none"><li>Creating a Logical Standby Database: This topic guides users through the process of creating and managing a logical standby database, including SQL Apply filtering.</li></ul>
Topic 7	<ul style="list-style-type: none"><li>Patching and Upgrading Databases in a Data Guard Configuration: This section provides guidance on patching and upgrading databases in a Data Guard environment, along with performance optimization techniques and monitoring considerations.</li></ul>

>> New 1z0-076 Braindumps Questions <<

**100% Free 1z0-076 – 100% Free New Braindumps Questions | Accurate Simulated Oracle Database 19c: Data Guard Administration Test**

The pass rate is 98% for 1z0-076 exam bootcamp, if you choose us, we can ensure you that you can pass the exam just one time. In addition, we offer you free demo to have a try before buying, so that you can know what the complete version is like. In order to strengthen your confidence for 1z0-076 training materials, we are pass guarantee and money back guarantee, and we will refund your money if you fail to pass the exam. We have a professional service team and they have the professional knowledge for 1z0-076 Exam Bootcamp, if you have any questions, you can contact with them.

## Oracle Database 19c: Data Guard Administration Sample Questions (Q49-Q54):

### NEW QUESTION # 49

Your Data Guard environment consists of these components and settings:

1. A primary database
2. Two remote physical standby databases
3. The redo transport mode is set to sync
4. Real-time query is enabled for both standby databases
5. The DB\_BLOCK\_CHECKING parameter is set to TRUE on both standby databases. You notice an increase in redo apply lag time on both standby databases.

Which two would you recommend to reduce the redo apply lag on the standby databases?

- A. Increase the size of standby redo log files on the standby databases.
- B. Increase the size of the buffer cache on the physical standby database instances.
- C. Increase the number of standby redo log files on the standby databases.
- D. Lower DB\_BLOCK\_CHECKING to MEDIUM or low on the standby databases.
- E. Decrease the redo log file size on the primary database.

**Answer: A,D**

Explanation:

To reduce the redo apply lag on standby databases, one could increase the size of the standby redo log files. Larger redo log files can accommodate more redo data, which may reduce the frequency of log switches and allow for more continuous application of redo data. Additionally, lowering the DB\_BLOCK\_CHECKING parameter to MEDIUM or LOW on the standby databases can help improve redo apply performance. High block checking can impose additional CPU overhead during the application of redo data, potentially increasing apply lag times. By reducing the level of block checking, you can lessen this overhead and help reduce the apply lag.

### NEW QUESTION # 50

You are planning to perform block comparison using the dbms comp package:

Which TWO statements are true?

- A. It can be used to detect lost writes and inconsistencies between the primary database and the cascaded standbys.
- B. You can monitor the progress of an ongoing block comparison operation by querying V\$SESSION\_LONGOPS.
- C. It requires that the DB\_LOST\_WKITE\_protect initialization parameter be enabled.
- D. The databases should be at least mounted before block comparison.
- E. Logical standby databases can be the target database for the dbms\_dbcomp.dbcomp procedure.

**Answer: B,D**

Explanation:

The DBMS\_COMPARISON package, used for comparing and converging data objects within a single database or between databases, requires that the databases involved in the block comparison be at least mounted (A). This allows the procedure to access the data blocks for comparison. Additionally, the progress of long-running operations such as block comparison can be monitored using the dynamic performance view V\$SESSION\_LONGOPS (D), which provides information on the operation's progress and estimated completion time.

References: Oracle Database PL/SQL Packages and Types Reference provides comprehensive details on the DBMS\_COMPARISON package, including its procedures and how to monitor their progress. Additionally, Oracle Database Reference explains the V\$SESSION\_LONGOPS view, which is commonly used for monitoring long operations in the database.

### NEW QUESTION # 51

Which three actions are performed by the START PLAN procedure of the DBMS ROLLING package?

- A. starting media recovery on all the Leading Group Standby databases
- B. switching the primary database to the logical standby role
- C. converting the designated physical standby database into a logical standby database
- D. building a LogMiner dictionary on the primary database instance
- E. creating a guaranteed restore point on the primary database
- F. creating a guaranteed restore point on the standby databases

**Answer: D,E,F**

Explanation:

The DBMS\_ROLLING package facilitates a rolling upgrade process across a Data Guard configuration. The START PLAN procedure in particular handles several critical actions, including:

Creating a guaranteed restore point on the standby databases (B): This ensures that the standby databases can be reverted to their state before the rolling upgrade process in case of any issues.

Building a LogMiner dictionary on the primary database instance (C): This is necessary for logical standby databases to interpret redo data during the SQL Apply process.

Creating a guaranteed restore point on the primary database (D): Similar to the standby databases, this ensures that the primary database can be reverted to a known good state if necessary.

Oracle Data Guard Concepts and Administration Guide

### NEW QUESTION # 52

Which three are true regarding prerequisites for a logical standby database as a disaster recovery solution?

- A. Ensure that no ROWID data types are contained in the primary database.
- B. Ensure that supplemental logging is enabled on the primary database.
- C. Ensure that no BFILE LOB data types are contained in the primary database.
- D. Do not perform any nologging operations on the primary.
- E. Ensure that flashback is enabled on the primary database.

**Answer: B,C,D**

### NEW QUESTION # 53

The Oracle database 19c Observer is currently running on host1 and you wish to have it running on host2.

Examine this list of possible steps:

- 1) Stop the observer on host1
- 2) Disable Fast-Start Failover
- 3) Update the broker configuration with the new observer hostname
- 4) Enable Fast-Start Failover
- 5) Start the Observer on host2

Which contains the minimum required steps to move the observer to host2?

- A. Execute only task 5
- B. Execute tasks 1 and 5
- C. Execute tasks 1, 3, and 5
- D. Execute tasks 1, 2, 3, 4, and 5

**Answer: C**

Explanation:

\* Stop the Observer on host1 to ensure that there are no conflicts between the instances of the Observer running on different hosts.

\* Update the Data Guard Broker configuration with the new hostname for the Observer. This step is crucial to redirect the Data Guard Broker to communicate with the Observer on the new host.

\* Start the Observer on host2 to resume its operations in the new environment.

Disabling and re-enabling Fast-Start Failover (steps 2 and 4) are not strictly necessary for moving the Observer to a new host.

These steps would be more relevant if changes to the configuration of Fast-Start Failover itself were required, which is not the case when simply relocating the Observer.

## NEW QUESTION # 54

Do you long to get the 1z0-076 certification to improve your life? Are you worried about how to choose the 1z0-076 learning product that is suitable for you? If your answer is yes, we are willing to tell you that you are a lucky dog, because you meet us, it is very easy for us to help you solve your problem. The 1z0-076 latest question from our company can help people get their 1z0-076 certification in a short time.
