Are you still worrying about the high difficulty to pass Salesforce certification PDII exam? Are you still sleeplessly endeavoring to review the book in order to pass Salesforce PDII Exam Certification? Do you want to pass Salesforce PDII exam certification faster? Be quick to select our Itcertkey! Having it can quickly fulfill your dreams.

Salesforce Certified Platform Developer II (PDII) certification exam is an advanced-level certification that validates a developer's expertise in building complex applications on the Salesforce platform. It is a valuable credential for developers who want to showcase their skills and expertise in the Salesforce ecosystem. By passing the PDII certification exam, developers can demonstrate their ability to design and implement complex business logic, data models, and custom user interfaces using Apex, Visualforce, and other advanced features of the Salesforce platform.

Salesforce Certified Platform Developer II (PDII) exam is an advanced certification intended for experienced developers who are looking to demonstrate their expertise in developing custom applications on the Salesforce platform. Salesforce Certified Platform Developer II (PDII) certification is designed to test a developer's knowledge and skills in designing and implementing complex business logic, data models, and security mechanisms using Apex programming language and other Salesforce development tools.

Salesforce PDII (Salesforce Certified Platform Developer II) Certification Exam is designed to evaluate the expertise of Salesforce developers who possess advanced skills and knowledge of the platform. Salesforce Certified Platform Developer II (PDII) certification is intended for developers who want to take their skills to the next level and work on complex projects. PDII exam tests the developer's ability to build customized applications on the Salesforce platform using Apex and Visualforce.

PDII Latest Exam Labs & PDII Learning Mode

Our products boost 3 versions and varied functions. The 3 versions include the PDF version, PC version, APP online version. You can use the version you like and which suits you most to learn our Salesforce Certified Platform Developer II (PDII) test practice dump. The 3 versions support different equipment and using method and boost their own merits and functions. For example, the PC version supports the computers with Window system and can stimulate the real exam. Our products also boost multiple functions which including the self-learning, self-evaluation, statistics report, timing and stimulation functions. Each function provides their own benefits to help the clients learn the PDII Exam Questions efficiently. For instance, the self-learning and self-evaluation functions can help the clients check their results of learning the Salesforce Certified Platform Developer II (PDII) study question.

Salesforce Certified Platform Developer II (PDII) Sample Questions (Q10-Q15):

NEW QUESTION # 10

There is an Apex controller and a Visualforce page in an org that displays records with a custom filter consisting of a combination of picklist values selected by the user.

The page takes too long to display results for some of the input combinations, while for other input choices it throws the exception, "Maximum view state size limit exceeded".

What step should the developer take to resolve this issue?

- A. Split the layout to filter records in one Visualforce page and display the list of records in a second page using the same Apex controller.
- **B. Use a StandardSetController or SOQL LIMIT in the Apex controller to limit the number of records displayed at a time.**
- C. Adjust any code that filters by picklist values since they are not indexed,
- D. Remove instances of the transient keyword from the Apex controller to avoid the view state error.

Answer: B

Explanation:

A StandardSetController or a SOQL LIMIT clause can be used to limit the number of records displayed at a time in a Visualforce page, and improve the performance and user experience of the page. A StandardSetController is a class that allows the developer to create list controllers, which can display a set of records using pagination, filtering, sorting, and other features. A SOQL LIMIT clause is a keyword that can be used to specify the maximum number of records to return from a query. By using either of these methods, the developer can reduce the amount of data that is transferred and processed by the page, and avoid the view state error, which occurs when the size of the view state exceeds the limit of 135 KB. Reference: [StandardSetController Class], [SOQL LIMIT Clause], [View State]

NEW QUESTION # 11

A company represents their customers as Accounts in Salesforce. All customers have a unique Customer_Number__c that is unique across all of the company's systems. They also have a custom Invoice__c object, with a Lookup to Account, to represent invoices that are sent out from their external system.

This company wants to integrate invoice data back into Salesforce so Sales Reps can see when a customer is paying their bills on time.

What is the optimal way to implement this?

- A. Create a cross-reference table in the custom invoicing system with the Salesforce Account ID of each Customer and insert invoice data nightly.
- B. Use Salesforce Connect and external data objects to seamlessly import the invoice data into Salesforce without custom code.
- **C. Ensure Customer_Number__c is an External ID and that a custom field Invoice_Number__c is an External ID and Upsert invoice data nightly.**
- D. Query the Account Object upon each call to insert invoice data to fetch the Salesforce ID corresponding to the Customer Number on the invoice.

Answer: C

NEW QUESTION # 12

A developer is trying to access org data from within a test class. Which sObject type requires the test class to have the (seeAllData=true) annotation?

- A. RecordType
- B. Report
- C. User
- D. Profile

Answer: D

Explanation:

Test (SeeAllData=true) annotation is used to grant test classes and individual test methods access to all data in the organization, including pre-existing data that the test didn't create. This annotation is required for Apex code saved using Salesforce API version 24.0 and later.

Profile is one of the sObject types that require the isTest (SeeAllData=true) annotation to access org data from within a test class. Other sObject types that require this annotation are User, UserRole, Group, GroupMember, QueueSobject, and CronTrigger. Therefore, using Profile as the sObject type requires the test class to have the isTest (SeeAllData=true) annotation.

NEW QUESTION # 13

A company needs to automatically delete sensitive information after seven years.

This could delete almost a million records every day.

How can this be achieved?

- A. Perform a SOSL statement to find records older than 7 years, and then delete the entire result set.
- B. Schedule an asyn process to query records older than seven years, and then recursively invoke itself in 1,000 record batches to delete them.
- C. {civ [+] Schedule a batch Apex process to run every day that queries and deletes records older than seven years.
- D. Use aggregate functions to query for records older than seven years, and then delete the aggregateResults objects.

Answer: C

Explanation:

The best way to achieve this is to schedule a batch Apex process to run every day that queries and deletes records older than seven years. Batch Apex allows the developer to process large sets of data in batches, which can handle up to 50 million records per execution. Batch Apex also supports scheduling, which allows the developer to specify the frequency and time of the execution. In this case, the developer can write a batch Apex class that implements the Database.Batchable and Schedulable interfaces, and query and delete the records that are older than seven years in the execute method. Scheduling an asynchronous process to query records older than seven years, and then recursively invoke itself in 1,000 record batches to delete them will not work, as it will hit the governor limits on the number of asynchronous jobs or the heap size. Using aggregate functions to query for records older than seven years, and then delete the aggregateResults objects will not work, as aggregateResults objects are read-only and cannot be deleted. Performing a SOSL statement to find records older than 7 years, and then delete the entire result set will not work, as SOSL does not support date literals or comparison operators, and the result set might exceed the DML limit of 10,000 records per transaction. Reference: [Batch Apex], [Schedulable Interface], [Apex Developer Guide]

NEW QUESTION # 14

A developer is integrating with a legacy on-premise SQL database.

What should the developer use to ensure the data being integrated is matched to the right records in Salesforce?

- A. Lookup field
- B. Formula field
- C. External Id field
- D. External Object

Answer: D

NEW QUESTION # 15

.....

Our Salesforce practice examinations provide a wonderful opportunity to pinpoint and overcome mistakes. By overcoming your mistakes before appearing in the real Salesforce PDII test, you can avoid making mistakes in the actual PDII Exam. These PDII self-assessment exams show your results, helping you to improve your performance while tracking your progress.
