In a side-by-side deployment between SAP S/4HANA and transportation management in SAP S/4HANA, which interface is used to transfer business partner, product, and location master data?

- A. Intermediate document (IDoc)
- B. Core interface (CIF)
- C. Web service (WS)
- D. Data replication framework (DRF)

Answer: D

Explanation:

In a side-by-side deployment between SAP S/4HANA and SAP S/4HANA Transportation Management, master data such as business partners, products, and locations are transferred using the Data Replication Framework (DRF) (A). According to the SAP documentation, DRF is the standard interface for replicating master data between SAP S/4HANA systems in a side-by-side scenario, ensuring consistency and synchronization of data like business partners, materials, and locations.

The other options are incorrect:

* Core interface (CIF) (B) is used in SAP APO and SAP SCM, not in SAP S/4HANA TM side-by-side deployments.

* Intermediate document (IDoc) (C) may be used for transactional data but is not the primary interface for master data replication.

* Web service (WS) (D) is used for specific integrations but not for standard master data replication in this scenario.
