Practice E-S4CPE-2405 Test Exam Pass For Sure | SAP Valid Braindumps E-S4CPE-2405 Files

As one of the most professional dealer of E-S4CPE-2405 practice questions, we have connection with all academic institutions in this line with proficient researchers of the knowledge related with the E-S4CPE-2405 exam materials to meet your tastes and needs, please feel free to choose. And we have three versions of E-S4CPE-2405 training guide: the PDF, Software and APP online for you. You can choose the one which you like best.

SAP E-S4CPE-2405 Exam Syllabus Topics:

Topic	Details
Topic 1	• Extensibility, Integration, and Clean Core: This section of the exam measures skills of integration specialists and involves understanding the principles of extending SAP functionality without compromising the clean core approach. It includes integrating SAP with other systems, maintaining system integrity, and ensuring sustainable customizations.
Topic 2	• Data Migration and Business Process Testing: This section of the exam measures skills of SAP implementation consultants and covers the core principles of migrating data into SAP systems while ensuring that business processes run as intended. It involves understanding the methods for transferring data, verifying its accuracy, and executing process testing to confirm that the system meets operational requirements.
Topic 3	• Introduction to Cloud Computing and SAP Cloud ERP Deployment Options: This section of the exam measures skills of cloud solution architects and focuses on the fundamentals of cloud computing, along with the different deployment models available for SAP Cloud ERP. It addresses the benefits, challenges, and selection criteria for choosing the most suitable deployment option in alignment with business goals.

SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition Sample Questions (Q33-Q38):

NEW QUESTION # 33
How can you assign an authorization to a user?

- A. The authorization has to be assigned to both the user master record and the role profile.
- B. The user has to be assigned to a user group that contains a role profile including the authorization.
- C. The authorization is associated with a role that has to be assigned to the user master record.
- D. The user has to be assigned to the authorization profile in SAP IMG.

Answer: C

NEW QUESTION # 34
Which of the following are captured in a completed Digital Discovery Assessment? Note: There are 2 correct answers to this question.

- A. Business role requirements
- B. Known integration requirements
- C. SAP Fiori application extensions
- D. Target customer go-live date

Answer: B,D

Explanation:
The Digital Discovery Assessment (DDA) is a tool used during the sales cycle (Discover phase of the SAP Activate Methodology) to evaluate a customer's requirements and recommend the best SAP S/4HANA Cloud deployment option-Public or Private Edition. For SAP S/4HANA Cloud Private Edition, the DDA captures detailed information to scope the implementation project. Let's analyze the options:
* A. Business role requirements: While business roles (e.g., authorizations, user roles) are critical for implementation, they are typically defined and configured during the Prepare and Explore phases of the SAP Activate Methodology, not captured in the DDA. The DDA focuses on high-level requirements rather than granular role-specific details. Thus, this is not a correct answer.
* B. Known integration requirements: This is correct. The DDA, especially in the Detailed Discovery phase, collects information about integrations with other SAP Cloud solutions (e.g., SAP SuccessFactors, SAP Ariba) or non-SAP systems that the customer already has or plans to adopt. This is crucial for Private Edition implementations, which often involve complex landscapes requiring extensive integration. SAP documentation confirms that identifying known integration requirements is a key output of the DDA.
* C. Target customer go-live date: This is also correct. The DDA includes project-specific details such as the target go-live date, which helps define the timeline and scope of the implementation. This information is entered during the Detailed Discovery to align

expectations and plan resources effectively, as noted in SAP's learning materials.
* D. SAP Fiori application extensions: This is incorrect. While SAP Fiori is integral to SAP S/4HANA Cloud Private Edition for its user interface, the DDA does not specifically capture details about Fiori application extensions. Extensions are typically addressed later in the implementation process (e.g., during the Realize phase) using tools like SAP Business Technology Platform (BTP). The DDA focuses on business processes, integrations, and project parameters rather than UI customizations.
In conclusion, the DDA for SAP S/4HANA Cloud Private Edition captures B (known integration requirements) and C (target customer go-live date) as key elements to inform the deployment recommendation and project scoping.

NEW QUESTION # 35

In which phase of an implementation project do the Fit-to-Standard analysis and design workshops take place?

- A. Realize
- B. Discover
- C. Prepare
- D. Explore

Answer: D

Explanation:
In the SAP Activate methodology, the Explore phase is where Fit-to-Standard analysis and design workshops take place. This phase focuses on validating the standard SAP processes against the customer's business requirements and identifying any necessary adjustments.
Option A: Realize
This option is incorrect. The Realize phase involves configuring the system based on the outcomes of the Explore phase and preparing it for testing and deployment.
Option B: Prepare
This option is incorrect. The Prepare phase includes initial planning and preparation activities but does not involve conducting Fit-to-Standard workshops.
Option C: Explore
This option is correct. During the Explore phase, Fit-to-Standard workshops are conducted to align standard SAP processes with the customer's business needs. These workshops are essential for defining how the solution will be configured in the subsequent phases.
Option D: Discover
This option is incorrect. The Discover phase is an initial phase focused on understanding the solution scope and benefits but does not include detailed process analysis workshops.
In summary, the Explore phase of the SAP Activate methodology is dedicated to conducting Fit-to-Standard analysis and design workshops, ensuring that the standard SAP processes are tailored to meet the customer's specific business requirements.

NEW QUESTION # 36

Which of the following systems is provided to you only via the SUM tool in a system conversion?

- A. SAP Business Technology Platform
- B. SAP S/4HANA Cloud Private Edition
- C. SAP Signavio Process Collaboration Hub
- D. SAP Signavio Process Manager

Answer: B

Explanation:
In a system conversion scenario, the Software Update Manager (SUM) tool is employed to transition existing systems to SAP S/4HANA Cloud, private edition. This process involves upgrading the current system to the SAP S/4HANA Cloud, private edition environment.
Option A: SAP Signavio Process Collaboration Hub

This option is incorrect. The SAP Signavio Process Collaboration Hub is a tool for process collaboration and management, not directly involved in system conversion.
Option B: SAP Business Technology Platform
This option is incorrect. SAP Business Technology Platform serves as a platform for integrating and extending SAP applications but is not the tool used for system conversion.
Option C: SAP Signavio Process Manager
This option is incorrect. The SAP Signavio Process Manager is used for process modeling and analysis, not for system conversion.
Option D: SAP S/4HANA Cloud Private Edition
This option is correct. The SUM tool facilitates the conversion of existing systems to SAP S/4HANA Cloud, private edition, ensuring a smooth transition to the new environment.
Therefore, in a system conversion, the SUM tool is utilized to migrate the system to SAP S/4HANA Cloud Private Edition.

NEW QUESTION # 37

What are some prerequisites if you want to transfer data with the Migrate Your Data - Migration Cockpit app using a separate SAP HANA database in SAP S/4HANA Cloud Private Edition?
Note: There are 2 correct answers to this question.

- A. You have to create the migration projects.
- B. You have to activate a certain business process.
- C. You have to set up the integration.
- D. You have to create the migration objects.

Answer: A,C

Explanation:
When transferring data using the "Migrate Your Data - Migration Cockpit" app with a separate SAP HANA database in SAP S/4HANA Cloud Private Edition, the following prerequisites must be met:
Option A: You have to set up the integration.
This option is correct. Establishing a connection between the source system and the target SAP S/4HANA Cloud system is essential for data migration.
Option B: You have to create the migration projects.
This option is correct. Defining migration projects within the Migration Cockpit organizes and manages the data migration process effectively.
Option C: You have to activate a certain business process.
This option is incorrect. Activating specific business processes is not a prerequisite for data migration using the Migration Cockpit.
Option D: You have to create the migration objects.
This option is incorrect. SAP provides standard migration objects, and while customization is possible, creating new migration objects is not a prerequisite.
In summary, setting up the integration and creating migration projects are essential prerequisites for using the Migration Cockpit app with a separate SAP HANA database in SAP S/4HANA Cloud Private Edition.
