How You Can Pass the Google Professional-Cloud-Architect Exam with Excellent Marks

We have free demo for Professional-Cloud-Architect study guide for you to have a try, so that you can have a deeper understanding of what you are going to buy. The free domo will show you what the complete version for Professional-Cloud-Architect exam dumps is like. Furthermore, with the outstanding experts to verify and examine the Professional-Cloud-Architect Study Guide, the correctness and quality can be guaranteed. You can pass the exam by using the Professional-Cloud-Architect exam dumps of us. You give us trust, we will ensure you to pass the exam.

Google Professional-Cloud-Architect Certification Exam is a highly respected certification in the cloud computing industry. It demonstrates the candidate's expertise in designing and managing cloud solutions on GCP and is recognized by employers worldwide. Google Certified Professional - Cloud Architect (GCP) certification also provides access to a network of certified professionals and resources that can help the candidate advance their career in cloud architecture.

Google Certified Professional - Cloud Architect (GCP) Sample Questions (Q115-Q120):

NEW QUESTION # 115
One of your primary business objectives is being able to trust the data stored in your application. You want to log all changes to the

application dat a. How can you design your logging system to verify authenticity of your logs?

- A. Create a JSON dump of each log entry and store it in Google Cloud Storage.
- B. Write the log concurrently in the cloud and on premises.
- C. Use a SQL database and limit who can modify the log table.
- D. Digitally sign each timestamp and log entry and store the signature.

Answer: D

Explanation:
https://cloud.google.com/storage/docs/access-logs
References: https://cloud.google.com/logging/docs/reference/tools/gcloud-logging

NEW QUESTION # 116
For this question, refer to the Mountkirk Games case study.
Mountkirk Games wants to set up a real-time analytics platform for their new game. The new platform must meet their technical requirements. Which combination of Google technologies will meet all of their requirements?

- A. Cloud Dataflow, Cloud Storage, Cloud Pub/Sub, and BigQuery
- B. Cloud Pub/Sub, Compute Engine, Cloud Storage, and Cloud Dataproc
- C. Cloud Dataproc, Cloud Pub/Sub, Cloud SQL, and Cloud Dataflow
- D. Cloud SQL, Cloud Storage, Cloud Pub/Sub, and Cloud Dataflow
- E. Container Engine, Cloud Pub/Sub, and Cloud SQL

Answer: A

Explanation:
A real time requires Stream / Messaging so Pub/Sub, Analytics by Big Query.
Ingest millions of streaming events per second from anywhere in the world with Cloud Pub/Sub, powered by Google's unique, high-speed private network. Process the streams with Cloud Dataflow to ensure reliable, exactly-once, low-latency data transformation.
Stream the transformed data into BigQuery, the cloud-native data warehousing service, for immediate analysis via SQL or popular visualization tools.
From scenario: They plan to deploy the game's backend on Google Compute Engine so they can capture streaming metrics, run intensive analytics.
Requirements for Game Analytics Platform
Dynamically scale up or down based on game activity
Process incoming data on the fly directly from the game servers
Process data that arrives late because of slow mobile networks
Allow SQL queries to access at least 10 TB of historical data
Process files that are regularly uploaded by users' mobile devices
Use only fully managed services

NEW QUESTION # 117
As part of Dress4Win's plans to migrate to the cloud, they want to be able to set up a managed logging
and monitoring system so they can handle spikes in their traffic load.
They want to ensure that:
* The infrastructure can be notified when it needs to scale up and down to handle the ebb and flow of
usage throughout the day
* Their administrators are notified automatically when their application reports errors.
* They can filter their aggregated logs down in order to debug one piece of the application across many
hosts
Which Google StackDriver features should they use?

- A. Monitoring, Logging, Debug, Error Report
- B. Logging, Alerts, Insights, Debug
- C. Monitoring, Logging, Alerts, Error Reporting
- D. Monitoring, Trace, Debug, Logging

Answer: D

NEW QUESTION # 118

You created a pipeline that can deploy your source code changes to your infrastructure in instance groups for self healing.

One of the changes negatively affects your key performance indicator.

You are not sure how to fix it and investigation could take up to a week.

What should you do

- A. Change the instance group template to the previous one, and delete all instances.
- B. Revert the source code change and rerun the deployment pipeline
- C. Log in to a server, and iterate a fix locally
- D. Log into the servers with the bad code change, and swap in the previous code

Answer: B

NEW QUESTION # 119

Your organization wants to control IAM policies for different departments independently, but centrally.

Which approach should you take?

- A. Multiple Organizations with multiple Folders
- B. Multiple Organizations, one for each department
- C. A single Organization with Folder for each department
- D. A single Organization with multiple projects, each with a central owner

Answer: C

Explanation:

Folders are nodes in the Cloud Platform Resource Hierarchy. A folder can contain projects, other folders, or a combination of both.

You can use folders to group projects under an organization in a hierarchy. For example, your organization might contain multiple departments, each with its own set of GCP resources.

Folders allow you to group these resources on a per-department basis. Folders are used to group resources that share common IAM policies. While a folder can contain multiple folders or resources, a given folder or resource can have exactly one parent.
