PCEP-30-02 Valid Exam Simulator | Reliable PCEP-30-02 Exam Topics

We have prepared our PCEP-30-02 training materials for you. They are professional practice material under warranty. Accompanied with acceptable prices for your reference, all our materials with three versions are compiled by professional experts in this area more than ten years long. Moreover, there are a series of benefits for you. So the importance of PCEP-30-02 Actual Test is needless to say. If you place your order right now, we will send you the free renewals lasting for one year. All those supplements are also valuable for your PCEP-30-02 practice exam.

Python Institute PCEP - Certified Entry-Level Python Programmer Sample Questions (Q29-Q34):

NEW QUESTION # 29

Arrange the code boxes in the correct positions in order to obtain a loop which executes its body with the counter variable going through values 1, 3, and 5 (in the same order)

Answer:

Explanation:

for counter in range(1, 7, 2):

Explanation:

```
* for
* counter
* in
* range
* (
* 1
* ,
* 7
* ,
* 2
* )
```

Arrange the code boxes in this order:

This will loop counter through: 1 # 3 # 5

NEW QUESTION # 30

Drag and drop the code boxes in order to build a program which prints Unavailable to the screen.

(Note: one code box will not be used.)

pass

except KeyError:

except:

```
prices = { "pizza": 3.99 }
try:
    charge = prices["calzone"]
    print("Charged")
    print("Unavailable")
```

 PYTHON INSTITUTE
Open Education & Development Group

Answer:

Explanation:

pass

except KeyError:

except:

```
prices = { "pizza": 3.99 }
try:
    charge = prices["calzone"]
    print("Charged")
    print("Unavailable")
```

except KeyError:

except:

```
print("Out of bounds")
```

 PYTHON INSTITUTE
Open Education & Development Group

```
prices = {"pizza": 3.99 }  
try:  
    charge = prices["calzone"]  
    print("Charged")  
except KeyError:  
    print("Unavailable")  
except:  
    print("Out of bounds")
```

NEW QUESTION # 31

Assuming that the phone_dir dictionary contains name:number pairs, arrange the code boxes to create a valid line of code which adds Oliver Twist's phone number (5551122333) to the directory.

phone_dir

=

"Oliver Twist"

{

"5551122333"

}

 **PYTHON INSTITUTE**
Open Education & Development Group

Answer:

Explanation:

phone_dir["Oliver Twist"] = ["5551122333"]

Explanation:

phone_dir

[

"Oliver Twist"

]

["5551122333"]

=

 **PYTHON INSTITUTE**
Open Education & Development Group

To correctly add Oliver Twist's phone number to the phone_dir dictionary, the code must follow this phone_dir["Oliver Twist"] = ["5551122333"] Now, let's match that with your code boxes and arrange them:

```
* phone_dir  
* [  
* "Oliver Twist"  
* ]  
* =  
* [  
* "5551122333"  
* ]
```

Final Order: phone_dir [# "Oliver Twist" #] # = # [# "5551122333" #]

NEW QUESTION # 32

What is the expected result of the following code?

```
def velocity(x=10):
    return speed + x

speed = 10
new_speed = velocity()
new_speed = velocity(new_speed)
print(new_speed)
```

- A. 0
- B. The code is erroneous and cannot be run.
- C. 1
- D. 2

Answer: B

Explanation:

Explanation

The code snippet that you have sent is trying to use the global keyword to access and modify a global variable inside a function. The code is as follows:

speed = 10
def velocity():
 global speed
 speed = speed + 10
 return speed
print(velocity())

The code starts with creating a global variable called "speed" and assigning it the value 10. A global variable is a variable that is defined outside any function and can be accessed by any part of the code. Then, the code defines a function called "velocity" that takes no parameters and returns the value of "speed" after adding 10 to it. Inside the function, the code uses the global keyword to declare that it wants to use the global variable

"speed", not a local one. A local variable is a variable that is defined inside a function and can only be accessed by that function. The global keyword allows the function to modify the global variable, not just read it. Then, the code adds 10 to the value of "speed" and returns it. Finally, the code calls the function "velocity" and prints the result.

However, the code has a problem. The problem is that the code uses the global keyword inside the function, but not outside. The global keyword is only needed when you want to modify a global variable inside a function, not when you want to create or access it outside a function. If you use the global keyword outside a function, you will get a SyntaxError exception, which is an error that occurs when the code does not follow the rules of the Python language. The code does not handle the exception, and therefore it will terminate with an error message.

The expected result of the code is an unhandled exception, because the code uses the global keyword incorrectly. Therefore, the correct answer is A. The code is erroneous and cannot be run.

NEW QUESTION # 33

What is the expected output of the following code?

```
counter = 84 // 2
if counter < 0:
    print("*")
elif counter >= 42:
    print("***")
else:
    print("****")
```

- A. ***
- B. *
- C. **

- D. The code produces no output.

Answer: C

Explanation:

Explanation

The code snippet that you have sent is a conditional statement that checks if a variable "counter" is less than 0, greater than or equal to 42, or neither. The code is as follows:

if counter < 0: print("") elif counter >= 42: print("") else: print("") The code starts with checking if the value of "counter" is less than 0. If yes, it prints a single asterisk () to the screen and exits the statement. If no, it checks if the value of "counter" is greater than or equal to 42. If yes, it prints three asterisks () to the screen and exits the statement. If no, it prints two asterisks () to the screen and exits the statement.

The expected output of the code depends on the value of "counter". If the value of "counter" is 10, as shown in the image, the code will print two asterisks (**) to the screen, because 10 is neither less than 0 nor greater than or equal to 42. Therefore, the correct answer is C. * *

NEW QUESTION # 34

.....

Today, getting PCEP-30-02 certification has become a trend, and PCEP-30-02 exam dump is the best weapon to help you pass certification. We all know that obtaining the PCEP-30-02 certification is very difficult, and students who want to pass the exam often have to spend a lot of time and energy. After years of hard work, the experts finally developed a set of perfect learning materials PCEP-30-02 practice materials that would allow the students to pass the exam easily. With our study materials, you only need 20-30 hours of study to successfully pass the exam and reach the peak of your career. What are you waiting for? Come and buy it now.

PCEP-30-02 Valid Exam Simulator: https://www.practicedump.com/PCEP-30-02_actualtests.html

Python Institute PCEP-30-02 Latest Braindumps Ppt Turn pressure into power, which may be your chance to complete the transformation, Python Institute PCEP-30-02 Latest Braindumps Ppt So it just takes you 20-30 minutes on practice and preparation, then you can be confident to face the actual test, On the whole, the pass rate of our PCEP-30-02 pass-king materials is about 98% to 99%, which can certainly be awarded crown in terms of this aspect, Python Institute PCEP-30-02 Latest Braindumps Ppt With the study of it, you can get a general understanding at first.

Bundled Mac App Store Apps, Some critics have called this PCEP-30-02 medicalizing ordinary life, Turn pressure into power, which may be your chance to complete the transformation.

So it just takes you 20-30 minutes on practice Valid Dumps PCEP-30-02 Pdf and preparation, then you can be confident to face the actual test, On the whole, the pass rate of our PCEP-30-02 pass-king materials is about 98% to 99%, which can certainly be awarded crown in terms of this aspect.

Free PDF Quiz 2025 Efficient Python Institute PCEP-30-02 Latest Braindumps Ppt

With the study of it, you can get a general understanding at first, We know the high-quality PCEP-30-02 exam braindumps: PCEP - Certified Entry-Level Python Programmer is a motive engine for our company.
