

PracticeMaterial 100-160 Exam Practice Test Questions Available In Three User-Friendly Formats

TEXES 160 PPR Exam Questions and Answers 100% Pass

Which of the following rationales would a supporter of block scheduling provide to convince others to support the organizational structure?

- A. Teachers can focus on more subjects in a shorter time
- B. There is an emphasis on mastering facts and skills
- C. Students' time in quality learning situations is increased
- D. The responsibility for learning is shifted to the teachers ✓✓C. Students' time in quality learning situations is increased

Which of the following strategies best supports a teacher's goal to incorporate critical thinking skills into language arts lessons?

- A. Providing students with opportunities to seek additional content knowledge
- B. Creating a forum for students to debate points of view
- C. Having students individually summarize various literature read
- D. Asking students to create practice questions as a review activity ✓✓B. Creating a forum for students to debate points of view

While making revisions and modifications to the Cisco 100-160 practice exam, our team takes reports from over 90,000 professionals worldwide to make the Cisco Certified Support Technician (CCST) Cybersecurity exam questions foolproof. To make you capable of preparing for the Cisco 100-160 Exam smoothly, we provide actual Cisco 100-160 exam dumps.

Cisco 100-160 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Incident Handling: This section of the exam measures the skills of an Incident Responder and centers on recognizing security incidents, responding appropriately, and containing threats—forming the essential foundation of incident response procedures.
Topic 2	<ul style="list-style-type: none"> Vulnerability Assessment and Risk Management: This section of the exam measures the skills of a Risk Management Analyst and entails identifying and assessing vulnerabilities, understanding risk priorities, and applying mitigation strategies that help manage threats proactively within an organization's systems

Topic 3	<ul style="list-style-type: none"> • Essential Security Principles: This section of the exam measures the skills of a Cybersecurity Technician and covers foundational cybersecurity concepts such as the CIA triad (confidentiality, integrity, availability), along with basic threat types and vulnerabilities, laying the conceptual groundwork for understanding how to protect information systems.
Topic 4	<ul style="list-style-type: none"> • Endpoint Security Concepts: This section of the exam measures the skills of an Endpoint Security Specialist and includes securing individual devices, understanding protections such as antivirus, patching, and access control at the endpoint level, essential for maintaining device integrity.
Topic 5	<ul style="list-style-type: none"> • Basic Network Security Concepts: This section of the exam measures the skills of a Network Defender and focuses on understanding network-level protections, including firewalls, VPNs, and intrusion detection prevention systems, providing insight into how threats are mitigated within network environments.

Practice 100-160 Exam Online - Free PDF Quiz Cisco Cisco Certified Support Technician (CCST) Cybersecurity Realistic Exam PDF

It is our promissory announcement on our 100-160 exam questions that you will get striking by these viable ways. So do not feel giddy among tremendous materials in the market ridden-ed by false materials. With great outcomes of the passing rate upon to 98-100 percent, our 100-160 Preparation braindumps are totally the perfect one. And you can find the comments and feedbacks on our website to see that how popular and excellent our 100-160 study materials are.

Cisco Certified Support Technician (CCST) Cybersecurity Sample Questions (Q266-Q271):

NEW QUESTION # 266

What should you create to prevent spoofing of the internal network?

- **A. An ACL**
- B. A NAT rule
- C. A record in the host file
- D. A DNS record

Answer: A

Explanation:

The CCST Cybersecurity Study Guide states that Access Control Lists (ACLs) can be used to filter traffic based on IP addresses and block packets that appear to originate from the internal network but arrive from external interfaces (IP spoofing).

"ACLs can prevent spoofing by dropping traffic from external sources that claim to have an internal source address. Configuring ACLs on the perimeter firewall or router is a common countermeasure for IP spoofing." (CCST Cybersecurity, Basic Network Security Concepts, ACLs and Traffic Filtering section, Cisco Networking Academy) A (NAT rule) changes IP addresses but does not inherently prevent spoofing.

B (ACL) is correct because it can enforce anti-spoofing filters.

C (host file) only affects name resolution locally.

D (DNS record) is for domain mapping, not spoofing prevention.

NEW QUESTION # 267

What is the most effective method to identify and remove unknown malware?

- **A. Analyzing the behavior of the suspicious program**
- B. Reinstalling the operating system
- C. Disconnecting the infected system from the network
- D. Scanning the system with multiple antivirus programs

Answer: A

Explanation:

When dealing with unknown malware, analyzing the behavior of the suspicious program can help to identify any abnormal or malicious activities. This can be done by using behavioral analysis tools, sandboxing, or observing the program's interactions with the system.

NEW QUESTION # 268

Which of the following is the most secure and recommended method for storing sensitive user data in a database?

- **A. Using hashing algorithms**
- B. Using symmetric encryption
- C. Storing the data in plain text
- D. Using asymmetric encryption

Answer: A

Explanation:

Option 1: Incorrect. Storing sensitive user data in plain text is highly insecure and not recommended. If a database breach occurs, all the data will be exposed without any protection.

Option 2: Incorrect. Using symmetric encryption would require storing the encryption key securely, which can be difficult. Additionally, any access to the data would require the encryption key, adding complexity and potential vulnerabilities.

Option 3: Correct. Using hashing algorithms is the most secure and recommended method for storing sensitive user data in a database. Hashing algorithms convert the data into a fixed-size string, making it difficult to reverse-engineer and obtain the original data. This ensures that even if a breach occurs, the sensitive data remains protected.

Option 4: Incorrect. Using asymmetric encryption would also require storing the encryption keys securely and adds unnecessary complexity for data retrieval, making it less practical for storing sensitive user data in a database.

NEW QUESTION # 269

What is the purpose of a firewall in endpoint security?

- **A. Prevent unauthorized access to the endpoint**
- B. Protect the endpoint from malware
- C. Monitor and detect suspicious activities on the endpoint
- D. Encrypt the data transmitted between the endpoint and the network

Answer: A

Explanation:

Firewalls are a key component of endpoint security as they help prevent unauthorized access to the endpoint. Firewalls work by examining incoming and outgoing network traffic and applying a set of rules to allow or block specific connections. By filtering and monitoring network traffic, firewalls act as a barrier between the endpoint and potential threats, such as hackers or unauthorized users, ensuring only authorized and secure connections are established.

NEW QUESTION # 270

Which of the following best describes social engineering?

- **A. A method of manipulating individuals to disclose sensitive information**
- B. A network security protocol
- C. A type of malware attack
- D. A physical security control

Answer: A

Explanation:

Social engineering refers to the practice of manipulating and deceiving individuals into revealing sensitive information or performing certain actions that may compromise security. It involves exploiting human psychology and trust to gain unauthorized access to systems or obtain confidential information. Social engineering tactics can include phishing emails, impersonation, pretexting, or other forms of manipulation to trick individuals into divulging passwords, account numbers, or other confidential data.

NEW QUESTION # 271

.....

It is important to check the exercises and find the problems. Once you use our 100-160 study prep to aid your preparation of the exam, all of your exercises of the study materials will be carefully recorded on the system of the 100-160 exam braindump. Also, you can know your current learning condition clearly. The results will display your final scores on the screen. Also, you will know the numbers of correct and false questions of your exercise. Our 100-160 test question grading system is designed to assist your study, which is able to calculate quickly. So you don't need to wait for a long time. The calculating speed of our 100-160 study prep is undergoing the test of practice. The highest record is up to five seconds. There has no delay time of the grading process. Slow system response doesn't exist. In addition, the calculation system of the 100-160 test question is very powerful and stable. We promise that the results of your exercises are accurate.
