

# Preparation GH-500 Store, GH-500 Exam Dumps Provider

2025 Latest PassTestking GH-500 PDF Dumps and GH-500 Exam Engine Free Share: [https://drive.google.com/open?id=194SMk4YGATrn0Mk\\_aOoQrf9uyp2QGdoJ](https://drive.google.com/open?id=194SMk4YGATrn0Mk_aOoQrf9uyp2QGdoJ)

To be well-prepared, you require trust worthy and reliable PassTestking practice material. You also require accurate PassTestking study material to polish your capabilities and improve your chances of passing the GH-500 certification exam. PassTestking facilitates your study with updated Microsoft GH-500 Exam Dumps. This GH-500 exam prep material has been prepared under the expert surveillance of 90,000 highly experienced PassTestking professionals worldwide.

## Microsoft GH-500 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Configure and use Dependabot and Dependency Review: Focused on Software Engineers and Vulnerability Management Specialists, this section describes tools for managing vulnerabilities in dependencies. Candidates learn about the dependency graph and how it is generated, the concept and format of the Software Bill of Materials (SBOM), definitions of dependency vulnerabilities, Dependabot alerts and security updates, and Dependency Review functionality. It covers how alerts are generated based on the dependency graph and GitHub Advisory Database, differences between Dependabot and Dependency Review, enabling and configuring these tools in private repositories and organizations, default alert settings, required permissions, creating Dependabot configuration files and rules to auto-dismiss alerts, setting up Dependency Review workflows including license checks and severity thresholds, configuring notifications, identifying vulnerabilities from alerts and pull requests, enabling security updates, and taking remediation actions including testing and merging pull requests.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Configure and use secret scanning: This domain targets DevOps Engineers and Security Analysts with the skills to configure and manage secret scanning. It includes understanding what secret scanning is and its push protection capability to prevent secret leaks. Candidates differentiate secret scanning availability in public versus private repositories, enable scanning in private repos, and learn how to respond appropriately to alerts. The domain covers alert generation criteria for secrets, user role-based alert visibility and notification, customizing default scanning behavior, assigning alert recipients beyond admins, excluding files from scans, and enabling custom secret scanning within repositories.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>Describe the GHAS security features and functionality: This section of the exam measures skills of Security Engineers and Software Developers and covers understanding the role of GitHub Advanced Security (GHAS) features within the overall security ecosystem. Candidates learn to differentiate security features available automatically for open source projects versus those unlocked when GHAS is paired with GitHub Enterprise Cloud (GHEC) or GitHub Enterprise Server (GHEs). The domain includes knowledge of Security Overview dashboards, the distinctions between secret scanning and code scanning, and how secret scanning, code scanning, and Dependabot work together to secure the software development lifecycle. It also covers scenarios contrasting isolated security reviews with integrated security throughout the development lifecycle, how vulnerable dependencies are detected using manifests and vulnerability databases, appropriate responses to alerts, the risks of ignoring alerts, developer responsibilities for alerts, access management for viewing alerts, and the placement of Dependabot alerts in the development process.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Describe GitHub Advanced Security best practices, results, and how to take corrective measures: This section evaluates skills of Security Managers and Development Team Leads in effectively handling GHAS results and applying best practices. It includes using Common Vulnerabilities and Exposures (CVE) and Common Weakness Enumeration (CWE) identifiers to describe alerts and suggest remediation, decision-making processes for closing or dismissing alerts including documentation and data-based decisions, understanding default CodeQL query suites, how CodeQL analyzes compiled versus interpreted languages, the roles and responsibilities of development and security teams in workflows, adjusting severity thresholds for code scanning pull request status checks, prioritizing secret scanning remediation with filters, enforcing CodeQL and Dependency Review workflows via repository rulesets, and configuring code scanning, secret scanning, and dependency analysis to detect and remediate vulnerabilities earlier in the development lifecycle, such as during pull requests or by enabling push protection.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Configure and use Code Scanning with CodeQL: This domain measures skills of Application Security Analysts and DevSecOps Engineers in code scanning using both CodeQL and third-party tools. It covers enabling code scanning, the role of code scanning in the development lifecycle, differences between enabling CodeQL versus third-party analysis, implementing CodeQL in GitHub Actions workflows versus other CI tools, uploading SARIF results, configuring workflow frequency and triggering events, editing workflow templates for active repositories, viewing CodeQL scan results, troubleshooting workflow failures and customizing configurations, analyzing data flows through code, interpreting code scanning alerts with linked documentation, deciding when to dismiss alerts, understanding CodeQL limitations related to compilation and language support, and defining SARIF categories.</li> </ul>

## GH-500 Exam Dumps Provider & Cheap GH-500 Dumps

Our Microsoft GH-500 exam questions are created and curated by industry specialists. Experts at PassTestking strive to provide applicants with valid and updated Microsoft GH-500 exam questions to prepare from, as well as increased learning experiences. We are confident in the quality of the Microsoft GH-500 preparational material we provide and back it up with a money-back guarantee.

### Microsoft GitHub Advanced Security Sample Questions (Q29-Q34):

#### NEW QUESTION # 29

Which of the following features helps to prioritize secret scanning alerts that present an immediate risk?

- A. Non-provider patterns
- B. Secret validation**
- C. Push protection
- D. Custom pattern dry runs

**Answer: B**

Explanation:

Secret validation checks whether a secret found in your repository is still valid and active with the issuing provider (e.g., AWS,

GitHub, Stripe). If a secret is confirmed to be active, the alert is marked as verified, which means it's considered a high-priority issue because it presents an immediate security risk.

This helps teams respond faster to valid, exploitable secrets rather than wasting time on expired or fake tokens.

### NEW QUESTION # 30

What is the purpose of the SECURITY.md file in a GitHub repository?

- A. [security.md](#)
- B. [contributing.md](#)
- C. [readme.md](#)
- D. [support.md](#)

**Answer: A**

Explanation:

The correct place to look is the SECURITY.md file. This file provides contributors and security researchers with instructions on how to responsibly report vulnerabilities. It may include contact methods, preferred communication channels (e.g., security team email), and disclosure guidelines.

This file is considered a GitHub best practice and, when present, activates a "Report a vulnerability" button in the repository's Security tab.

### NEW QUESTION # 31

When configuring code scanning with CodeQL, what are your options for specifying additional queries? (Each answer presents part of the solution. Choose two.)

- A. [github/codeql](#)
- B. [Packs](#)
- C. [Queries](#)
- D. Scope

**Answer: B,C**

Explanation:

You can customize CodeQL scanning by including additional query packs or by specifying individual queries:

Packs: These are reusable collections of CodeQL queries bundled into a single package.

Queries: You can point to specific files or directories containing .ql queries to include in the analysis.

[github/codeql](#) refers to a pack by name but is not a method or field. Scope is not a valid field used for configuration in this context.

### NEW QUESTION # 32

What do you need to do before you can define a custom pattern for a repository?

- A. [Enable secret scanning on the repository.](#)
- B. Provide match requirements for the secret format.
- C. Add a secret scanning custom pattern.
- D. Provide a regular expression for the format of your secret pattern.

**Answer: A**

Explanation:

Stack Overflow

Explanation:

Comprehensive and Detailed Explanation:

Before defining a custom pattern for secret scanning in a repository, you must enable secret scanning for that repository. Secret scanning must be active to utilize custom patterns, which allow you to define specific formats (using regular expressions) for secrets unique to your organization.

Once secret scanning is enabled, you can add custom patterns to detect and prevent the exposure of sensitive information tailored to your needs.

## NEW QUESTION # 33

Which Dependabot configuration fields are required? (Each answer presents part of the solution. Choose three.)

- A. allow
- B. milestone
- C. schedule.interval
- D. directory
- E. package-ecosystem

**Answer: C,D,E**

Explanation:

Comprehensive and Detailed Explanation:

When configuring Dependabot via the dependabot.yml file, the following fields are mandatory for each update configuration:  
directory: Specifies the location of the package manifest within the repository. This tells Dependabot where to look for dependency files.

package-ecosystem: Indicates the type of package manager (e.g., npm, pip, maven) used in the specified directory.

schedule.interval: Defines how frequently Dependabot checks for updates (e.g., daily, weekly). This ensures regular scanning for outdated or vulnerable dependencies.

The milestone field is optional and used for associating pull requests with milestones. The allow field is also optional and used to specify which dependencies to update.

GitLab

## NEW QUESTION # 34

.....

All the GH-500 training files of our company are designed by the experts and professors in the field. The quality of our study materials is guaranteed. According to the actual situation of all customers, we will make the suitable study plan for all customers. If you buy the GH-500 Learning Materials from our company, we can promise that you will get the professional training to help you pass your GH-500 exam easily. By our professional training, you will pass your GH-500 exam and get the related certification in the shortest time.
