220-1101 Valid Test Questions | 220-1101 Latest Exam Labs

If you want our 220-1101 study materials to download and print, the PDF version is perfect for you since it has the function of being printable. And the PDF version of our 220-1101 exam questions can be noted when you want to memory something as well as to indicate the keypoints. Also, our 220-1101 Preparation exam is unlimited in number of devices, making it easy for you to learn anytime, anywhere.

CompTIA A+ Certification Exam: Core 1 Sample Questions (Q767-Q772):

NEW QUESTION # 767

Which of the following resolutions is commonly known as Ultra HD?

- A. 1920x1080
- B. 7680x4320
- C. 2048x1080
- **D. 3840x2160**

Answer: D

Explanation:

Comprehensive and Detailed In-Depth Explanation:

Ultra HD (UHD), also referred to as 4K UHD, has a resolution of 3840x2160. It's four times the resolution of standard 1080p (Full HD), offering more screen real estate and sharper images.

* Option A (1920x1080): Full HD (FHD), not UHD.

* Option B (2048x1080): DCI 2K - used in cinema, not common for Ultra HD.

* Option D (7680x4320): Known as 8K UHD, not standard Ultra HD.

CompTIA A+ Core 1 Exam Objective Reference:

* Objective 1.7: Compare and contrast display technologies and their features.

NEW QUESTION # 768

An administrator configured multiple networked devices to store data that can be accessed as local storage. Which of the following did the administrator create?

- **A. SAN**
- B. MAN
- C. WLAN
- D. PAN

Answer: A

Explanation:

A Storage Area Network (SAN) is a network specifically designed to pool storage resources and make them accessible to servers as if they were locally attached drives. SANs are used in data centers for high-performance storage and retrieval of large volumes of data. This setup allows multiple networked devices to access shared storage as if it were local, which matches the scenario described. PAN (Personal Area Network), WLAN (Wireless LAN), and MAN (Metropolitan Area Network) serve different purposes and do not primarily focus on shared storage access.

Reference:

CompTIA A+ Core 1 Exam Objectives Section 2.7: Compare and contrast Internet connection types, network types, and their features.

NEW QUESTION # 769

A technician installed a Cat 5 UTP cable approximately 275ft (84m) from a network switch in an office to a workstation located on a factory floor. The technician sees both a flashing green LED and a flashing orange LED on the workstation's NIC. Which of the following should the technician do FIRST?

- A. Upgrade the entire cable run to multimode fiber.
- **B. Check for loose connections, pinched bends, and physical damage.**
- C. Replace the entire run of Cat 5 UTP cable with Cat 5 STP cable.

- D. Install a powered hub as close as possible to the halfway point in the Cat 5 UTP cable run.

Answer: B

Explanation:

The flashing green and orange LEDs on the NIC indicate connection issues. The technician should first check for loose connections, pinched bends, and physical damage, which are the most common causes of connection problems. References: CompTIA A+ Certification Exam Guide, Ninth Edition, Chapter 14

NEW QUESTION # 770

A technician is receiving reports that the entire office sporadically loses network connectivity throughout the day. The technician determines the root cause to be EMI. Which of the following cable mediums would be the MOST cost effective without sacrificing system performance?

- A. Shielded Cat 6
- B. Multimode fiber
- C. Coaxial
- D. Plenum Cat 5e

Answer: A

Explanation:

Explanation

In this situation, the MOST cost-effective cable medium that would not sacrifice system performance would be B. Shielded Cat 6. Electromagnetic interference (EMI) can disrupt network connectivity by interfering with the signals transmitted over network cables. Shielded Cat 6 cables are designed to provide protection against EMI by incorporating a layer of shielding material around the cable's conductors. This shielding helps to prevent EMI from interfering with the signals transmitted over the cable.

NEW QUESTION # 771

Which of the following types of RAM is typically used in servers?

- A. ECC
- B. DDR3
- C. Rambus
- D. SODIMM

Answer: A

Explanation:

ECC (Error-Correcting Code) RAM is commonly used in servers to provide error detection and correction, improving reliability in critical systems. It is designed to detect and correct single-bit errors, ensuring data integrity in environments where stability is paramount.

* Option A (SODIMM): Incorrect. SODIMM is typically used in laptops, not servers.

* Option B (Rambus): Incorrect. Rambus is an outdated RAM type and not commonly used today.

* Option C (DDR3): Incorrect. While DDR3 is a type of RAM, it is not specific to servers and does not provide error correction.

References:

* CompTIA A+ Core 1 Objectives: 3.2 (RAM types and their uses)

NEW QUESTION # 772

.....

Are you preparing for the coming 220-1101 exam right now? And you feel exhausted when you are searching for the questions and answers to find the keypoints, right? In fact, you do not need other reference books. Our 220-1101 study materials will offer you the most professional guidance. In addition, our 220-1101 learning quiz will be updated according to the newest test syllabus. So you can completely rely on our 220-1101 study materials to pass the exam.
