OmniStudio-Developer Latest Exam Simulator - OmniStudio-Developer Reliable Test Question

If you really intend to pass the OmniStudio-Developer exam, our software will provide you the fast and convenient learning and you will get the best study materials and get a very good preparation for the exam. The content of the OmniStudio-Developer guide torrent is easy to be mastered and has simplified the important information. What's more, our OmniStudio-Developer prep torrent conveys more important information with less questions and answers. The learning is relaxed and highly efficiently.

Salesforce Certified OmniStudio Developer Sample Questions (Q15-Q20):

NEW QUESTION # 15

Refer to the exhibit below. In this Integration Procedure structure, what Send JSON Path would you use to send the output of the ActionZ element to a Response Action?

- A. ActionZ:BlockY:BlockX
- B. ActionZ:BlockY:BlockX
- C. BlockX:BlockY:ActionAZ
- **D. BlockX.BlockYActionZ**

Answer: D

Explanation:

The Send JSON Path syntax for accessing an element from an Integration Procedure structure is BlockName.

ElementName. In this case, the BlockName is BlockX and the ElementName is ActionZ. The colon (:) is used to separate the input and output parameters, not the block and element names. The order of the block and element names should follow the hierarchy of the structure, from top to bottom.

NEW QUESTION # 16

What should a developer's first step be when troubleshooting whether a DataRaptor Extract is retrieving data?

- A. Add a key/value pair in the DataRaptor to test it.
- B. Deactivate the card and layout, and go to the PREVIEW tab for the card to test.
- **C. Go to the PREVIEW tab In OmniScript to test.**
- D. Go to the Lightning Console and reload the page to test.

Answer: C

Explanation:

Explanation

The PREVIEW tab in OmniScript allows the developer to test the DataRaptor Extract by providing a record ID and viewing the output data. This is a quick and easy way to troubleshoot whether the DataRaptor Extract is retrieving data correctly.

NEW QUESTION # 17

A developer is configuring an integration Procedure Action in an OmniScript. The Omniscript needs a JSON response from the Integration Procedure but does not need to wait for the response for the user to proceed.

Which feature should the developer enable?

- A. Toast Completion
- B. Invoke Mode Non-Blocking
- C. Use Future
- **D. Invoke Mode Fire and Forget**

Answer: D

Explanation:

Explanation

The Invoke Mode Fire and Forget feature enables the OmniScript to invoke the Integration Procedure without waiting for a response. This is useful when the response is not needed for the user to proceed

NEW QUESTION # 18

A developer needs to configure a calculation procedure to calculate a subtotal using two different formulas depending on whether the input Boolean variable is Customer is set to true or false.

How should a developer configure the calculation procedure to conditionally execute the correct formula?

- A. Use two separate Calculation Steps with the Conditional Step property selected: reference just the Customer variable in the Conditional syntax (no comparison necessary)
- B. Use two separate Calculation Steps with the Conditional Step property selected: compare the Customer variable directly to the literal true and false values in the Condition syntax.
- C. Use a single Calculation Step with IF statement directly in the formula definition to reference the Customer variable and conditionally perform the appropriate calculation.
- **D. Use two separate Calculation Steps with the Conditional Step property selected: use the ISTRUE (is Customer) and NOT (ISTRUE) (is Customer) functions in the Condition syntax.**

Answer: D

Explanation:

Explanation

Using two separate Calculation Steps with the Conditional Step property selected allows the developer to specify different formulas based on different conditions. The ISTRUE(isCustomer) and NOT(ISTRUE(isCustomer)) functions are used to evaluate the Boolean variable in the Condition syntax. The other options are either missing the Conditional Step property, using incorrect comparison operators, or using an IF statement instead of separate Calculation Steps.

NEW QUESTION # 19

A developer has a requirement to create a child FlexCard that contains all of its parent FlexCard's records in a Datatable.

- A. {Params.records}
- B. {Records[0]}
- C. {recordId}
- **D. {Records}**

Answer: D

Explanation:

The correct syntax for passing all of the parent FlexCard's records to a child FlexCard is {Records}, which represents an array of records. The other options are incorrect because they either use an invalid syntax or refer to a single record instead of an array of records.

NEW QUESTION # 20

.....

When you take Salesforce OmniStudio-Developer practice exams again and again you get familiar with the Salesforce Certified OmniStudio Developer (OmniStudio-Developer) real test pressure and learn to handle it for better outcomes. Features of the web-based and desktop OmniStudio-Developer Practice Exams are similar.
