NEW QUESTION # 28

What are two reasons you might see `iprope_in_check()` check failed, drop when using the debug flow? (Choose two.)

- **A. Trusted host list misconfiguration.**
- B. Packet was dropped because of policy route misconfiguration.
- C. Packet was dropped because of traffic shaping.
- **D. VIP or IP pool misconfiguration.**

Answer: A,D

Explanation:

VIP or IP pool misconfiguration.

If a VIP or IP pool maps an address to the FortiGate itself, traffic destined for that address is treated as "local in," and `iprope_in_check()` will drop it when the FortiGate thinks it owns the IP. Trusted host list misconfiguration.

Management or local in traffic (HTTPS, SSH, ping, etc.) hitting a FortiGate interface is subject to the trusted host list on that interface. If the source IP isn't permitted, `iprope_in_check()` will catch and drop it.
