Furthermore, the 101-500 practice exam works smoothly on all operating systems including Mac, Linux, IOS, Android, and Windows. It is a browser-based LPIC-1 Exam 101, Part 1 of 2, version 5.0 (101-500) practice test software, there is no need for any specific software installation or additional plugins to function correctly.

Installation & Package Management for Linux

This area will address fundamental knowledge areas including the ones highlighted below:

- Make use of the Debian package for management that contains specific files and peculiarities.
- Control shared libraries by identifying them
- Choose and configure a boot manager, e.g. GRUB Legacy, and deal with the boot loader, & changes for GRUB 2.

Lpi LPIC-1 Exam 101, Part 1 of 2, version 5.0 Sample Questions (Q280-Q285):

NEW QUESTION # 280

Which of the following commands list all files and directories within the /tmp/ directory and its subdirectories which are owned by the user root? (Choose two.)

- A. `find *path/tmp *user root -print`
- B. `find /tmp *uid root -print`

- C. `find *path/tmp *uid root`
- **D. `find /tmp *user root -print`**
- E. `find /tmp *user root`

Answer: A,D

NEW QUESTION # 281

Which of the following commands redirects the output of `ls` to standard error?

`ls >-1`

- A. `ls <<ERR`
- B. `ls |error`
- C.
- D. `ls >&2`
- **E. `ls >>2`**

Answer: E

NEW QUESTION # 282

During a system boot cycle, what program is executed after the BIOS completes its tasks?

- A. The `inetd` program
- **B. The bootloader**
- C. The `init` program
- D. The kernel

Answer: B

Explanation:

The bootloader is a program that is executed by the BIOS after it completes its tasks of initializing the hardware and performing the POST (Power-On Self Test). The bootloader is responsible for loading the kernel and other necessary files into memory and passing control to the kernel. The bootloader can be either installed in the Master Boot Record (MBR) of the disk or in a separate partition. Some examples of bootloaders are GRUB, LILO, and SYSLINUX. NEW QUESTION # 283

What do the permissions `-rwsr-xr-x` mean for a binary file when it is executed as a command?

- A. The command is SetUID and it will be executed with the effective rights of the owner.
- B. The command will be executed with the effective rights of the group instead of the owner.
- **C. The execute flag is not set for the owner. Therefore, the SetUID flag is ignored.**
- D. The command will be executed with the effective rights of the owner and group.

Answer: C

Explanation:

The permissions `-rwsr-xr-x` mean that the file is readable and writable by the owner, readable and executable by the group, and readable and executable by others. The `S` in the owner's permissions indicates that the file has the SetUID bit set, which means that when the file is executed as a command, it will run with the effective user ID of the file owner, rather than the user who executed it. This allows the command to perform privileged operations that the user normally cannot do. For example, the `/bin/passwd` command has the SetUID bit set, so that it can modify the `/etc/shadow` file, which is only writable by root. NEW QUESTION # 284

Which of the following files exist in a standard GRUB 2 installation? (Choose two.)

- Answer: C,D**
