Explanation:

Answer Area

Actions

Map the data entity to the data view.

Configure properties for the data entity.

Synchronize the database.

Build the solution.

Synchronize the database.

Build the solution.

Configure properties for the data entity.

Step 1: Synchronize the database

Entities are created as views in Microsoft SQL Server, and staging tables are also added. Therefore, you must sync a database when you build entities.

Step 2: Build the solution

Build your project

In Solution Explorer, right-click your project, and then click Properties.

Change the value of the Synchronize database on build property to True, and then click OK. This property must be set only one time per project.

On the Visual Studio toolbar, click Build > Build Solution to build the project.

Step 3: Configure properties for the data entity
After build visually validate and customize an entity
