Salesforce Process Automation Accredited Professional Sample Questions (Q130-Q135):

NEW QUESTION # 130

What does debug option in Flow Builder allow an administrator to do?

- A. Enter custom values for input variable and view step-wise details.
- B. Run the most recent saved version of the flow with auto-save mode turned OFF.
- C. Version a Flow that can be saved as current version after the Flow has run.
- D. Roll back to previously executed actions, callouts, and changes committed to the database.

Answer: A

Explanation:

The debug option in Flow Builder allows an administrator to test the flow by entering custom values for input variables and then executing the flow step by step. This feature provides detailed information about each step's execution, helping to identify and troubleshoot issues within the flow. It's a crucial tool for ensuring that the flow behaves as expected before activation. Reference: Salesforce Help - Debug a Flow

NEW QUESTION # 131

Which three actions can a business analyst take with a process action?

- A. Export up to 3 resources that are currently being used in the flow or process.
- B. Import field values from another record and merge them with the record that started the process
- C. Submit the record for approval.
- D. Create and update the records that started the process or any related record.
- E. Send email and/or Post to Chatter.

Answer: C,D,E

Explanation:

A business analyst can take the following actions with a process action: A) Submit the record for approval, B) Send email and/or post to Chatter, and D) Create and update the records that started the process or any related record. These actions enable automating business processes such as approvals, communications, and data management directly within the Salesforce platform. Reference: Salesforce Help Documentation on Process Builder Actions.

NEW QUESTION # 132

How many active versions of a flow can you have at a given time?

- A. Unlimited
- B. 0
- C. 1
- D. 2

Answer: C

NEW QUESTION # 133

Ursa Major Solar is automating a complex business process. The Administrator discovers that flows needed for the orchestration already exist in the org; however, they cannot create the orchestration in Flow Builder. What could be causing this issue?

- A. The Administrator is missing the "Manage Flow" permission.
- B. "Orchestration" is disabled under Flow Builder settings in the Setup.
- C. The org does not have "LEX for Flows" add-in activated for all users.
- D. One or more existing flows have a reference to an External Object.

Answer: A

NEW QUESTION # 134

Which three of the following are the key components to build a process in Process Builder?

- A. Node
- B. Scheduler
- C. Criteria Node
