Providing services 24/7 with patient and enthusiastic staff, they are willing to make your process more convenient. So, if I can be of any help to you in the future, please feel free to contact us at any time on our 212-82 Exam Braindumps.

ECCouncil Certified Cybersecurity Technician Sample Questions (Q18-Q23):

NEW QUESTION # 18

Leilani, a network specialist at an organization, employed Wireshark for observing network traffic. Leilani navigated to the Wireshark menu icon that contains items to manipulate, display and apply filters, enable, or disable the dissection of protocols, and configure user-specified decodes.

Identify the Wireshark menu Leilani has navigated in the above scenario.

- A. Analyze
- B. Statistics
- **C. Capture**
- D. Main toolbar

Answer: C

NEW QUESTION # 19

ApexTech, a cybersecurity consultancy, was approached by a large energy conglomerate to assess the robustness of its energy grid control systems. The conglomerate is transitioning from traditional systems to a more interconnected smart grid. ApexTech proposed a penetration test to identify potential vulnerabilities in the new setup. The firm provided four methodologies it could employ to assess the system's vulnerabilities comprehensively. The energy conglomerate must select the approach that would be MOST revealing and beneficial in identifying vulnerabilities in the context of its transitioning infrastructure:

- A. A blind penetration test where testers have no prior knowledge of the infrastructure.
- **B. A targeted test where both the testers and IT team work collaboratively and are fully informed.**
- C. An external test focusing only on the conglomerate's externally facing assets and systems.
- D. A double-blind test where both the energy company's IT team and testers are unaware of the impending test.

Answer: B

NEW QUESTION # 20

Finley, a security professional at an organization, was tasked with monitoring the organizational network behavior through the SIEM dashboard. While monitoring, Finley noticed suspicious activities in the network; thus, he captured and analyzed a single network packet to determine whether the signature included malicious patterns. Identify the attack signature analysis technique employed by Finley in this scenario.

- A. Composite signature-based analysis
- **B. Content-based signature analysis**
- C. Atomic-signature-based analysis
- D. Context-based signature analysis

Answer: B

Explanation:

Content-based signature analysis is the attack signature analysis technique employed by Finley in this scenario. Content-based

signature analysis is a technique that captures and analyzes a single network packet to determine whether the signature included malicious patterns. Content-based signature analysis can be used to detect known attacks, such as buffer overflows, SQL injections, or cross-site scripting.

NEW QUESTION # 21

A global financial services firm is revising its cybersecurity policies to comply with a diverse range of international regulatory frameworks and laws. The firm operates across multiple continents, each with distinct legal requirements concerning data protection, privacy, and cybersecurity. As part of their compliance strategy, they are evaluating various regulatory frameworks to determine which ones are most critical to their operations. Given the firm's international scope and the nature of its services, which of the following regulatory frameworks should be prioritized for compliance?

- A. ISO 27002 Code of Practice for information security controls
- B. ISO 27001 Information Security Management System
- C. General Data Protection Regulation (GDPR) - European Union
- D. NIST Cybersecurity Framework

Answer: C

NEW QUESTION # 22

In a multinational corporation, the IT department implemented a new network security protocol for their global data centers. This protocol was designed to enhance security measures by incorporating advanced access control principles. The protocol employs a combination of methods to ensure that only authorized personnel can access sensitive data. Recently, an incident occurred where an unauthorized user gained access to confidential data. The security team discovered that the intruder exploited a specific aspect of the access control system.

Which aspect of the access control principles, terminologies, and models was most likely exploited?

- A. Discretionary Access Control (DAC), where the resource owner decides on the access permissions.
- B. Role-Based Access Control (RBAC), where access is given based on the roles within the organization.
- C. Attribute-Based Access Control (ABAC), where access decisions are made based on a set of policies and attributes.
- D. Mandatory Access Control (MAC), where access decisions are made based on predefined rules set by the system's administrator.

Answer: A

NEW QUESTION # 23

.....
