Professional-Cloud-Architect Exam Questions Vce - Professional-Cloud-Architect Reliable Exam Simulator

Do you feel aimless and helpless when the Professional-Cloud-Architect exam is coming soon? If your answer is absolutely yes, then we would like to suggest you to try our Professional-Cloud-Architect training materials, which are high quality and efficiency test tools. Your success is 100% ensured to pass the Professional-Cloud-Architect Exam and acquire the dreaming certification which will enable you to reach for more opportunities to higher incomes or better enterprises.

Google Professional Cloud Architect Certification Path

The Google Professional Cloud Architect Certification is the highest level of certification mainly focussing to the Solution Architect

Professional. There is no prerequisite for this exam but still it would be best to follow some sequence in order to prove immense knowledge as a Google professional Cloud Architect. You can complete Google Associate Certifications then approach for the professional certification. For more information related to Google cloud certification track Google-certification-path

Google Certified Professional - Cloud Architect (GCP) Sample Questions (Q84-Q89):

NEW QUESTION # 84

At Dress4Win, an operations engineer wants to create a low-cost solution to remotely archive copies of database backup files.

The database files are compressed tar files stored in their current data center.

How should he proceed?

- A. Create a Cloud Storage Transfer Service job to copy the files to a Regional Storage bucket.
- B. Create a Cloud Storage Transfer Service Job to copy the files to a Coldline Storage bucket.
- **C. Create a cron script using gsutil to copy the files to a Coldline Storage bucket.**
- D. Create a cron script using gsutil to copy the files to a Regional Storage bucket.

Answer: C

Explanation:

Explanation/Reference:

Explanation:

Follow these rules of thumb when deciding whether to use gsutil or Storage Transfer Service:

- * When transferring data from an on-premises location, use gsutil.
- * When transferring data from another cloud storage provider, use Storage Transfer Service.
- * Otherwise, evaluate both tools with respect to your specific scenario.

Use this guidance as a starting point.

The specific details of your transfer scenario will also help you determine which tool is more appropriate.

NEW QUESTION # 85

You have created several pre-emptible Linux virtual machine instances using Google Compute Engine.

You want to properly shut down your application before the virtual machines are preempted.

What should you do?

- A. Create a shutdown script named k99.shutdown in the /etc/rc.6.d/directory
- B. Create a shutdown script registered as a xinetd service in Linux and configure a Stackdriver endpoint check to call the service
- C. Create a shutdown script, registered as a xinetd service in Linux, and use the gcloud compute instances add-metadata command to specify the service URL as the value for a new metadata entry with the key shutdown-script-url
- **D. Create a shutdown script and use it as the value for a new metadata entry with the key shutdown-script in the Cloud Platform Console when you create the new virtual machine instance**

Answer: D

Explanation:

Explanation/Reference:

Explanation:

A startup script, or a shutdown script, is specified through the metadata server, using startup script metadata keys.

NEW QUESTION # 86

Your organization wants to control IAM policies for different departments independently, but centrally.

Which approach should you take?

- **A. A single Organization with Folder for each department**
- B. A single Organization with multiple projects, each with a central owner
- C. Multiple Organizations, one for each department

- D. Multiple Organizations with multiple Folders

Answer: A

Explanation:

Folders are nodes in the Cloud Platform Resource Hierarchy. A folder can contain projects, other folders, or a combination of both. You can use folders to group projects under an organization in a hierarchy. For example, your organization might contain multiple departments, each with its own set of GCP resources.

Folders allow you to group these resources on a per-department basis. Folders are used to group resources that share common IAM policies. While a folder can contain multiple folders or resources, a given folder or resource can have exactly one parent.

References: <https://cloud.google.com/resource-manager/docs/creating-managing-folders>

NEW QUESTION # 87

For this question, refer to the Dress4Win case study. You are responsible for the security of data stored in Cloud Storage for your company, Dress4Win. You have already created a set of Google Groups and assigned the appropriate users to those groups. You should use Google best practices and implement the simplest design to meet the requirements.

Considering Dress4Win's business and technical requirements, what should you do?

- A. Assign custom IAM roles to the Google Groups you created in order to enforce security requirements. Encrypt data with a customer-supplied encryption key when storing files in Cloud Storage.
- **B. Assign predefined IAM roles to the Google Groups you created in order to enforce security requirements. Utilize Google's default encryption at rest when storing files in Cloud Storage.**
- C. Assign custom IAM roles to the Google Groups you created in order to enforce security requirements. Enable default storage encryption before storing files in Cloud Storage.
- D. Assign predefined IAM roles to the Google Groups you created in order to enforce security requirements. Ensure that the default Cloud KMS key is set before storing files in Cloud Storage.

Answer: B

Explanation:

Mix Questions

Question Set 1

NEW QUESTION # 88

Your company's user-feedback portal comprises a standard LAMP stack replicated across two zones. It is deployed in the us-central1 region and uses autoscaled managed instance groups on all layers, except the database. Currently, only a small group of select customers have access to the portal. The portal meets a

99,99% availability SLA under these conditions. However next quarter, your company will be making the portal available to all users, including unauthenticated users. You need to develop a resiliency testing strategy to ensure the system maintains the SLA once they introduce additional user load.

What should you do?

- **A. Capture existing users input, and replay captured user load until resource utilization crosses 80%. Also, derive estimated number of users based on existing user's usage of the app, and deploy enough resources to handle 200% of expected load**
- B. Create synthetic random user input, replay synthetic load until autoscale logic is triggered on at least one layer, and introduce "chaos" to the system by terminating random resources on both zones
- C. Capture existing users input, and replay captured user load until autoscale is triggered on all layers. At the same time, terminate all resources in one of the zones
- D. Expose the new system to a larger group of users, and increase group size each day until autoscale logic is triggered on all layers. At the same time, terminate random resources on both zones

Answer: A

NEW QUESTION # 89

.....

The Google Certified Professional - Cloud Architect (GCP) (Professional-Cloud-Architect) practice tests have customizable time

and Google Certified Professional - Cloud Architect (GCP) (Professional-Cloud-Architect) exam questions feature so that the students can set the time and Google Certified Professional - Cloud Architect (GCP) (Professional-Cloud-Architect) exam questions according to their needs. The Google Certified Professional - Cloud Architect (GCP) (Professional-Cloud-Architect) practice test questions are getting updated on the daily basis and there are also up to 1 year of free updates. Earning the Google Certified Professional - Cloud Architect (GCP) (Professional-Cloud-Architect) certification exam is the way to grow in the modern era with high-paying jobs.
