Usually, the recommended sources of studies for certification exams are boring and lengthy. It makes the candidate feel uneasy and they fail to prepare themselves for Professional-Cloud-Architect exam. Contrary to this, Itcertking dumps are interactive, enlightening and easy to grasp within a very short span of time. You can check the quality of these unique exam dumps by downloading Free Professional-Cloud-Architect Dumps from Itcertking before actually purchasing.

If you are determined to purchase our Professional-Cloud-Architect valid exam collection materials for your companies, if you pursue long-term cooperation with site, we will have some relate policy. Firstly we provide one-year service warranty for every buyer who purchased Professional-Cloud-Architect valid exam collection materials. Every buyer can share one year free updates and preparation assist. Secondly if you want to get the free updates not just for one year, you want to still get the new version of Google Professional-Cloud-Architect valid exam collection materials after one year, you share 50% discount for the second year.

>> Professional-Cloud-Architect Technical Training <<

Providing You High-quality Professional-Cloud-Architect Technical Training with 100% Passing Guarantee

The most amazing part of our Professional-Cloud-Architect exam questions is that your success is 100% guaranteed. As the leader in this career for over ten years, we have enough strenght to make our Professional-Cloud-Architect study materials advanced in every sigle detail. On one hand, we have developed our Professional-Cloud-Architect learning guide to the most accurate for our worthy customers. As a result, more than 98% of them passed the exam. On the second hand, our services are considered the best and the most professional to give guidance for our customers.

Google Certified Professional - Cloud Architect (GCP) Sample Questions (Q90-Q95):

NEW QUESTION # 90

Your organization requires that metrics from all applications be retained for 5 years for future analysis in possible legal proceedings. Which approach should you use?

- A. Grant the security team access to the logs in each Project.
- B. Configure Stackdriver Monitoring for all Projects, and export to BigQuery.
- **C. Configure Stackdriver Monitoring for all Projects, and export to Google Cloud Storage.**
- D. Configure Stackdriver Monitoring for all Projects with the default retention policies.

Answer: C

Explanation:

<https://cloud.google.com/monitoring/api/v3/metrics>

NEW QUESTION # 91

Your company has decided to build a backup replica of their on-premises user authentication PostgreSQL database on Google Cloud Platform. The database is 4 TB, and large updates are frequent. Replication requires private address space communication. Which networking approach should you use?

- A. A Google Compute Engine instance with a VPN server installed connected to the data center network
- **B. Google Cloud Dedicated Interconnect**
- C. Google Cloud VPN connected to the data center network
- D. A NAT and TLS translation gateway installed on-premises

Answer: B

Explanation:

<https://cloud.google.com/docs/enterprise/best-practices-for-enterprise-organizations> Google Cloud Dedicated Interconnect provides direct physical connections and RFC 1918 communication between your on-premises network and Google's network. Dedicated Interconnect enables you to transfer large amounts of data between networks, which can be more cost effective than purchasing additional bandwidth over the public Internet or using VPN tunnels.

Benefits:

Traffic between your on-premises network and your VPC network doesn't traverse the public Internet. Traffic traverses a dedicated connection with fewer hops, meaning there are less points of failure where traffic might get dropped or disrupted.

Your VPC network's internal (RFC 1918) IP addresses are directly accessible from your on-premises network. You don't need to use a NAT device or VPN tunnel to reach internal IP addresses. Currently, you can only reach internal IP addresses over a dedicated connection. To reach Google external IP addresses, you must use a separate connection.

You can scale your connection to Google based on your needs. Connection capacity is delivered over one or more 10 Gbps Ethernet connections, with a maximum of eight connections (80 Gbps total per interconnect).

The cost of egress traffic from your VPC network to your on-premises network is reduced. A dedicated connection is generally the least expensive method if you have a high-volume of traffic to and from Google's network.

NEW QUESTION # 92

For this question, refer to the Dress4Win case study. Considering the given business requirements, how would you automate the deployment of web and transactional data layers?

- **A. Migrate Nginx and Tomcat to App Engine. Deploy a Cloud Datastore server to replace the MySQL server in a high-availability configuration. Deploy Jenkins to Compute Engine using Cloud Launcher.**
- B. Deploy Nginx and Tomcat using Cloud Launcher. Deploy a MySQL server using Cloud Launcher. Deploy Jenkins to Compute Engine using Cloud Deployment Manager scripts.
- C. Migrate Nginx and Tomcat to App Engine. Deploy a MySQL server using Cloud Launcher. Deploy Jenkins to Compute Engine using Cloud Launcher.
- D. Deploy Nginx and Tomcat using Cloud Deployment Manager to Compute Engine. Deploy a Cloud SQL server to replace MySQL. Deploy Jenkins using Cloud Deployment Manager.

Answer: A

NEW QUESTION # 93

For this question, refer to the Mountkirk Games case study

Mountkirk Games needs to create a repeatable and configurable mechanism for deploying isolated application environments.

Developers and testers can access each other's environments and resources, but they cannot access staging or production resources.

The staging environment needs access to some services from production.

What should you do to isolate development environments from staging and production?

- A. Create one subnetwork for development and another for staging and production.
- B. Create one project for development, a second for staging and a third for production.
- C. Create a network for development and test and another for staging and production.
- **D. Create a project for development and test and another for staging and production.**

Answer: D

NEW QUESTION # 94

Your marketing department wants to send out a promotional email campaign. The development team wants to minimize direct operation management. They project a wide range of possible customer responses, from 100 to 500,000 click-throughs per day. The link leads to a simple website that explains the promotion and collects user information and preferences. Which infrastructure should you recommend? (CHOOSE TWO)

- A. Use a Google Container Engine cluster to serve the website and store data to persistent disk.
- B. Use a single compute Engine virtual machine (VM) to host a web server, backed by Google Cloud SQL.
- **C. Use a managed instance group to serve the website and Google Cloud Bigtable to store user data.**
- **D. Use Google App Engine to serve the website and Google Cloud Datastore to store user data.**

Answer: C,D
