The Prep4sureExam Google Professional-Cloud-Database-Engineer PDF questions file, desktop practice test software, and web-based practice test software, all these three Google Professional-Cloud-Database-Engineer practice test questions formats are ready for instant download. Just download any Google Professional-Cloud-Database-Engineer Exam Questions format and start this journey with confidence. Best of luck with exams and your career!!!

Google Professional-Cloud-Database-Engineer certification exam is an excellent opportunity for IT professionals to validate their expertise in cloud-based database solutions using GCP. Professional-Cloud-Database-Engineer exam covers a wide range of topics related to database administration, data modeling, security, scalability, and performance optimization. Candidates who pass the exam will receive a Google Cloud Certified - Professional Cloud Database Engineer certification, which can help them advance their career and increase their earning potential.

Google Professional-Cloud-Database-Engineer exam is one of the latest certification exams offered by Google Cloud. It is designed to validate the skills and knowledge of database engineers who have expertise in designing, developing, and managing databases on Google Cloud Platform. Google Cloud Certified - Professional Cloud Database Engineer certification exam is intended for database engineers, cloud architects, and database administrators who want to demonstrate their ability to design, develop, deploy, and maintain databases on Google Cloud Platform.

Google Professional-Cloud-Database-Engineer Certification is a valuable credential for database professionals who want to advance their careers and demonstrate their expertise in managing database solutions on Google Cloud Platform. Google Cloud Certified - Professional Cloud Database Engineer certification is recognized by employers and industry experts as a testament to the candidate's knowledge and skills in designing, building, and managing enterprise-grade database systems. With the growing demand for cloud-based database solutions, the Professional-Cloud-Database-Engineer certification can open up new career opportunities and help professionals stay ahead of the curve.

## **Professional-Cloud-Database-Engineer Reliable Exam Blueprint | Valid Test Professional-Cloud-Database-Engineer Bootcamp**

The world is changing rapidly and the requirements to the employees are higher than ever before. If you want to find an ideal job and earn a high income you must boost good working abilities and profound major knowledge. Passing Professional-Cloud-Database-Engineer certification can help you realize your dreams. If you buy our product, we will provide you with the best Google Cloud Certified study materials and it can help you obtain Professional-Cloud-Database-Engineer certification. Our product is of high quality and our service is perfect.

## **Google Cloud Certified - Professional Cloud Database Engineer Sample**

## Questions (Q132-Q137):

### NEW QUESTION # 132

You need to migrate existing databases from Microsoft SQL Server 2016 Standard Edition on a single Windows Server 2019 Datacenter Edition to a single Cloud SQL for SQL Server instance. During the discovery phase of your project, you notice that your on-premises server peaks at around 25,000 read IOPS. You need to ensure that your Cloud SQL instance is sized appropriately to maximize read performance. What should you do?

- A. Create a SQL Server 2019 Standard on High Memory machine type with 16 vCPUs, 104 GB of RAM, and 4 TB of SSD.
- B. Create a SQL Server 2019 Standard on High Memory machine type with at least 16 vCPUs, 104 GB of RAM, and 200 GB of SSD.
- C. Create a SQL Server 2019 Standard on Standard machine type with 4 vCPUs, 15 GB of RAM, and 800 GB of solid-state drive (SSD).
- D. Create a SQL Server 2019 Enterprise on High Memory machine type with 16 vCPUs, 104 GB of RAM, and 500 GB of SSD.

### Answer: A

Explanation:

Given that Google SSD performance is related to the size of the disk in an order of 30 IOPS for each GB, it would require at least 833 GB to handle 25000 IOPS, the only answer that exceeds this value is C.

<https://cloud.google.com/compute/docs/disks/performance>

### NEW QUESTION # 133

You are configuring a new application that has access to an existing Cloud Spanner database. The new application reads from this database to gather statistics for a dashboard. You want to follow Google-recommended practices when granting Identity and Access Management (IAM) permissions. What should you do?

- A. Create a new service account, and grant it the Cloud Spanner Database Reader role.
- B. Create a new service account, and grant it the spanner.databases.select permission.
- C. Reuse the existing service account that populates this database.
- D. Create a new service account, and grant it the Cloud Spanner Database Admin role.

### Answer: D

### NEW QUESTION # 134

You are configuring a brand new Cloud SQL for PostgreSQL database instance in Google Cloud. Your application team wants you to deploy one primary instance, one standby instance, and one read replica instance. You need to ensure that you are following Google-recommended practices for high availability. What should you do?

- A. Configure the primary, standby, and read replica instances in zone A, all in the same region.
- B. Configure the primary instance in zone A, the standby instance in zone C, and the read replica in zone B, all in the same region.
- C. Configure the primary instance in one region, the standby instance in a second region, and the read replica in a third region.
- D. Configure the primary and standby instances in zone A and the read replica in zone B, all in the same region.

### Answer: D

### NEW QUESTION # 135

You want to migrate an on-premises mission-critical PostgreSQL database to Cloud SQL. The database must be able to withstand a zonal failure with less than five minutes of downtime and still not lose any transactions.

You want to follow Google-recommended practices for the migration. What should you do?

- A. Build a change data capture (CDC) pipeline to read transactions from the primary instance, and replicate them to a secondary instance.
- B. Enable high availability (HA) for the database to make it regional.

- C. Take nightly snapshots of the primary database instance, and restore them in a secondary zone.
- D. Create a read replica in another region, and promote the read replica if a failure occurs.

**Answer: B**

#### NEW QUESTION # 136

You are running a transactional application on Cloud SQL for PostgreSQL in Google Cloud. The database is running in a high availability configuration within one region. You have encountered issues with data and want to restore to the last known pristine version of the database. What should you do?

- A. Use the Cloud SQL database import feature. Import last week's dump file from Cloud Storage.
- B. Create a clone database from a read replica database, and restore the clone into a different zone.
- C. Use the Cloud SQL point-in-time recovery (PITR) feature. Restore the copy from two hours ago to a new database instance.
- D. Create a clone database from a read replica database, and restore the clone in the same region.

**Answer: C**

Explanation:

Using import/export from last week is slow for large scale databases and will restore database from last week.

#### NEW QUESTION # 137

.....

A lot of applicants have studied from Google Professional-Cloud-Database-Engineer practice material. They have rated it positively because they have cracked Google Cloud Certified - Professional Cloud Database Engineer (Professional-Cloud-Database-Engineer) certification on their first try. Prep4sureExam guarantees its customers that they can pass the Google Cloud Certified - Professional Cloud Database Engineer (Professional-Cloud-Database-Engineer) test on the first attempt.
