

Professional-Cloud-Database-Engineer Training Materials Give You an Excellent Guide Dump to Master More Useful Knowledge

What's more, part of that 2Pass4sure Professional-Cloud-Database-Engineer dumps now are free: <https://drive.google.com/open?id=1htingZSxUtGaqlUEhC9ZCGAmcPWJ6mFW>

Our company is a professional exam dumps material providers, with occupying in this field for years, and we are quite familiar with compiling the Professional-Cloud-Database-Engineer exam materials. If you choose us, we will give you free update for one year after purchasing. Besides, the quality of Professional-Cloud-Database-Engineer Exam Dumps is high, they contain both questions and answers, and you can practice first before seeing the answers. Choosing us means you choose to pass the exam successfully.

Google Professional-Cloud-Database-Engineer certification exam is intended for individuals who have experience in database administration, development, and management on the Google Cloud platform. Professionals who pass this certification exam demonstrate their ability to design, develop, and manage highly scalable, secure, and available databases on the Google Cloud Platform.

Google Professional-Cloud-Database-Engineer certification exam is designed for individuals who are interested in demonstrating their expertise in designing, developing, and managing secure and scalable database solutions on the Google Cloud Platform. Professional-Cloud-Database-Engineer Exam is intended for database professionals who have experience with Google Cloud SQL, Cloud Spanner, and Cloud Bigtable, among other Google Cloud database services.

How 2Pass4sure Professional-Cloud-Database-Engineer Exam Practice Questions Can Help You in Exam Preparation?

We don't just want to make profitable deals, but also to help our users pass the exams with the least amount of time to get Professional-Cloud-Database-Engineer certificate. Choosing our Professional-Cloud-Database-Engineer exam practice, you only need to spend 20-30 hours to prepare for the exam. Maybe you will ask whether such a short time can finish all the content, we want to tell you that you can rest assured, because our Professional-Cloud-Database-Engineer Learning Materials are closely related to the exam outline and the questions of our Professional-Cloud-Database-Engineer guide questions are related to the latest and basic knowledge. You will pass the Professional-Cloud-Database-Engineer exam only with our Professional-Cloud-Database-Engineer exam questions.

Google Professional-Cloud-Database-Engineer Certification is a valuable certification for database engineers and administrators who work with the Google Cloud Platform. It demonstrates a high level of expertise and knowledge in database management on the cloud, which is becoming increasingly important in today's digital landscape. Candidates can prepare for the exam by studying database management principles and gaining hands-on experience with database administration on the Google Cloud Platform.

Google Cloud Certified - Professional Cloud Database Engineer Sample Questions (Q43-Q48):

NEW QUESTION # 43

Your company is migrating their MySQL database to Cloud SQL and cannot afford any planned downtime during the month of December. The company is also concerned with cost, so you need the most cost-effective solution. What should you do?

- **A. Use Cloud SQL maintenance settings to prevent any maintenance during the month of December.**
- B. Create MySQL read replicas in different zones so that, if any downtime occurs, the read replicas will act as the primary instance during the month of December.
- C. Create a MySQL regional instance so that, if any downtime occurs, the standby instance will act as the primary instance during the month of December.
- D. Open a support ticket in Google Cloud to prevent any maintenance in that MySQL instance during the month of December.

Answer: A

Explanation:

<https://cloud.google.com/sql/docs/mysql/maintenance?hl=fr>

NEW QUESTION # 44

You want to migrate an existing on-premises application to Google Cloud. Your application supports semi-structured data ingested from 100,000 sensors, and each sensor sends 10 readings per second from manufacturing plants. You need to make this data available for real-time monitoring and analysis. What should you do?

- A. Deploy the database using Cloud Spanner.
- **B. C. Deploy the database using Bigtable.**
- C. Use BigQuery, and load data in batches.
- D. Deploy the database using Cloud SQL.

Answer: B

Explanation:

Bigtable is a scalable, fully managed, and high-performance NoSQL database service that can handle semi-structured data and support real-time monitoring and analysis. Cloud SQL is a relational database service that does not support semi-structured data. BigQuery is a data warehouse service that is optimized for batch processing and analytics, not real-time monitoring. Cloud Spanner is a relational database service that supports semi-structured data with JSON data type, but it is more expensive and complex than Bigtable for this use case.

NEW QUESTION # 45

Your organization works with sensitive data that requires you to manage your own encryption keys. You are working on a project that stores that data in a Cloud SQL database. You need to ensure that stored data is encrypted with your keys. What should you do?

- A. Export data periodically to a Cloud Storage bucket protected by Customer-Supplied Encryption Keys.
- B. Connect to Cloud SQL using a connection that has SSL encryption.
- **C. Use customer-managed encryption keys with Cloud SQL.**
- D. Use Cloud SQL Auth proxy.

Answer: C

NEW QUESTION # 46

You are deploying a new Cloud SQL instance on Google Cloud using the Cloud SQL Auth proxy. You have identified snippets of application code that need to access the new Cloud SQL instance. The snippets reside and execute on an application server running on a Compute Engine machine. You want to follow Google-recommended practices to set up Identity and Access Management (IAM) as quickly and securely as possible. What should you do?

- A. For the application server, set up a common shared user account.
- B. For each application code, set up a common shared user account.
- **C. For the application server, set up a service account.**
- D. For each application code, set up a dedicated user account.

Answer: C

Explanation:

<https://cloud.google.com/sql/docs/mysql/sql-proxy#using-a-service-account>

NEW QUESTION # 47

Your team recently released a new version of a highly consumed application to accommodate additional user traffic. Shortly after the release, you received an alert from your production monitoring team that there is consistently high replication lag between your primary instance and the read replicas of your Cloud SQL for MySQL instances. You need to resolve the replication lag. What should you do?

- A. Stop all running queries, and re-create the replicas.
- B. Edit the primary instance to upgrade to a larger disk, and increase vCPU count.
- **C. Identify and optimize slow running queries, or set parallel replication flags.**
- D. Edit the primary instance to add additional memory.

Answer: C

Explanation:

https://cloud.google.com/sql/docs/mysql/replication/replication-lag#optimize_queries_and_schema
