Google Cloud Certified - Professional Cloud Security Engineer Exam Sample Questions (Q184-Q189):

NEW QUESTION # 184

You are in charge of creating a new Google Cloud organization for your company. Which two actions should you take when creating the super administrator accounts? (Choose two.)

- A. Disable any Identity and Access Management (IAM) roles for super admin at the organization level in the Google Cloud Console.
- B. Use a private connection to create the super admin accounts to avoid sending your credentials over the Internet.
- C. Provide non-privileged identities to the super admin users for their day-to-day activities.
- **D. Use a physical token to secure the super admin credentials with multi-factor authentication (MFA).**
- **E. Create an access level in the Google Admin console to prevent super admin from logging in to Google Cloud.**

Answer: D,E

NEW QUESTION # 185

Your company is concerned about unauthorized parties gaining access to the Google Cloud environment by using a fake login page. You must implement a solution to protect against person-in-the-middle attacks. Which security measure should you use?

- **A. Security key**
- B. Google Authenticator application
- C. Google prompt
- D. Text message or phone call code

Answer: A

Explanation:

Explanation

A security key is a physical device that you can use for two-step verification, providing an additional layer of security for your Google Account. Security keys can defend against phishing and man-in-the-middle attacks, making your login process more secure.

NEW QUESTION # 186

Your organization develops software involved in many open source projects and is concerned about software supply chain threats. You need to deliver provenance for the build to demonstrate the software is untampered. What should you do?

- A. * 1. Publish the software code on GitHub as open source.
* 2. Establish a bug bounty program, and encourage the open source community to review, report, and fix the vulnerabilities.
- B. * 1. Review the software process.
* 2. Generate private and public key pairs and use Pretty Good Privacy (PGP) protocols to sign the output software artifacts together with a file containing the address of your enterprise and point of contact.
* 3. Publish the PGP signed attestation to your public web page.
- **C. * 1- Generate Supply Chain Levels for Software Artifacts (SLSA) level 3 assurance by using Cloud Build.
* 2. View the build provenance in the Security insights side panel within the Google Cloud console.**
- D. * 1. Hire an external auditor to review and provide provenance

- * 2. Define the scope and conditions.
- * 3. Get support from the Security department or representative.
- * 4. Publish the attestation to your public web page.

Answer: C
