NETWORK AND SECURITY FOUNDATION 2024/2025 OBJECTIVE ASSESSMENT VERIFIED QUESTIONS AND ANSWERS 100% GRADED A+

Basic elements of a fiber-optic communication plan - (correct answer) fiber, optical light source, photosensitive detection, efficient optical connection

Advantages of fiber optics - (correct answer) bandwidth
immunity to electrostatic interference
elimination of crosstalk
lower signal attenuation
lower cost
safety
no corrosion problem
security

Commonly used wavelengths in fiber-optic systems - (correct answer) 850 nm
1310 nm
1550 nm
1600-1625 nm

What part of an optical fiber carries the light - (correct answer) the core of an optical fiber carries the light

What is a measure of fibers light acceptance - (correct answer) numerical aperture

typical core/cladding sizes in microns for multimode fiber - (correct answer) 50/125um and 62.5/125um

Typical core size for single fiber mode - (correct answer) 7 to 10 um

what are the two key distance limiting parameters in fiber optic transmission - (correct answer) attenuation and dispersion

four factors that contribute to attenuation - (correct answer) scattering, absorption, macrobending, microbending

three types of dispersion - (correct answer) modal, chromatic, polarization mode

two light sources used in fiber optic - (correct answer) diode laser
light emitting diode

WGU Network-and-Security-Foundation Sample Questions (Q10-Q15):

NEW QUESTION # 10

After a series of attacks, an organization needs to bolster its data protection measures. Which strategy should be used to increase data protection?

- A. Implement wired equivalent privacy (WEP)
- B. Use a variable network topology
- C. Have restoration policies in place
- D. Require that passwords change weekly

Answer: C

Explanation:

Having restoration policies in place ensures that in the event of data breaches, ransomware, or system failures, data can be quickly restored from secure backups. This minimizes downtime and data loss.

- * Using a variable network topology does not directly improve data security.
- * Changing passwords weekly may lead to weaker security due to password fatigue.
- * WEP is obsolete and does not provide strong encryption for data protection.

NEW QUESTION # 11

A company is ensuring that its network protocol meets encryption standards. What is the CIA triad component targeted in the scenario?

- A. Availability
- B. Consistency
- C. Integrity
- D. Confidentiality

Answer: D

Explanation:

Confidentiality in IT security ensures that sensitive data remains private and protected from unauthorized access. Encryption is a key measure used to maintain confidentiality by encoding data so that only authorized users can access it.

- * Integrity ensures that data remains accurate and unchanged.
- * Availability ensures that data is accessible when needed.
- * Consistency is not a component of the CIA triad.

NEW QUESTION # 12

An organization has experienced injection attacks in the past and wants to take actions to mitigate this type of attack. What should this organization do?

- A. Detect code vulnerabilities
- B. Decrease the wireless range
- C. Use server-side validation
- D. Use Wi-Fi Protected Access 2 (WPA2)

Answer: C

Explanation:

Server-side validation helps prevent SQL injection, command injection, and other input-based attacks by ensuring that user input is properly sanitized before being processed by the system. Parameterized queries and input validations should also be implemented to further reduce risk.

- * Detecting code vulnerabilities is helpful but not a direct mitigation technique.
- * Decreasing wireless range does not affect injection attacks.
- * Using WPA2 secures wireless networks but does not prevent injection attacks.

NEW QUESTION # 13

Which CIA triad component is a driver for enabling role-based access controls?

- A. Availability
- B. Consistency
- C. Integrity
- D. Confidentiality

Answer: D

Explanation:

Confidentiality ensures that sensitive information is only accessible to authorized individuals. Role-Based Access Control (RBAC) enforces confidentiality by restricting access based on a user's role within an organization, ensuring that only authorized users can view or modify certain data.

- * Integrity ensures data is not altered improperly.
- * Availability ensures access to resources but does not manage permissions.
- * Consistency is not a CIA triad component.

NEW QUESTION # 14

A start-up company wants to build its computer network by starting with the base-level resources offered by a cloud service. In this way, the company won't have to buy physical hardware but can still have complete control over operating systems and other software.

Which cloud service model should be used?

- A. Software as a Service (SaaS)
- B. Platform as a Service (PaaS)
- C. Infrastructure as a Service (IaaS)
- D. Function as a Service (FaaS)

Answer: C

Explanation:

Infrastructure as a Service (IaaS) provides virtualized computing resources, including virtual machines, storage, and networking, while allowing users full control over operating systems and applications. Examples include AWS EC2 and Google Compute Engine.

- * SaaS provides ready-to-use applications (e.g., Google Docs).
- * FaaS runs code in response to events (e.g., AWS Lambda).
- * PaaS provides development environments but not full infrastructure control.
