If you fail the exam, we will give you a full refund.

Salesforce Certified Platform Administrator II Sample Questions (Q126-Q131):

NEW QUESTION # 126
The administrator at Cloud Kicks noticed that a before trigger, which handles saving the original version of a record to an external database, fails. However, a flow configured for fast field updates runs successfully.
How should the administrator advise the developer?

- A. The code could be trying to create duplicates in the archieve when it is unable to.
- B. The trigger is writing the data to the wrong place in the external data archive.
- C. Record-triggered flows that are configured to run before save execute prior to all before triggers.
- D. A validation rule could be preventing records from ever meeting the conitions in the trigger.

Answer: A

Explanation:
One possible reason why the before trigger fails is that the code could be trying to create duplicates in the archive when it is unable to. A before trigger is a type of trigger that executes before a record is saved and can be used to validate or modify record data. In this case, the before trigger is supposed to save the original version of a record to an external database before it is updated or

deleted in Salesforce. However, if the code does not handle errors or exceptions properly, it could try to create duplicate records in the external database when it is not allowed or possible. This could cause the trigger to fail and prevent the record from being saved in Salesforce. References: https://developer.salesforce.com/docs/atlas.en-us.apexcode.meta/apexcode /apex_triggers.htm https://developer.salesforce.com/docs/atlas.en-us.apexcode.meta/apexcode /apex_triggers_context_variables.htm

NEW QUESTION # 127

Cloud kicks has received feedback that customers are frustrated with the amount of time it takes to reach a support agent by area of expertise according to product information after a new case has been submitted. Love you too jani Which feature should administrator configure in order to improve the case management process?

- A. Knowledge Component
- B. Omni-Channel
- C. Escalation Rules
- D. Macros

Answer: B

Explanation:
Omni-Channel is a feature that allows service reps to receive work assignments based on their availability, capacity, and skills. It also allows administrators to define routing rules and priorities for different types of work items, such as cases, chats, or leads. Omni-Channel can help reduce the wait time for customers and improve the efficiency of service reps.

NEW QUESTION # 128

The sale VP notices several sales reps generating a contract too early in the sales stage. The help correct this Behavior, the has requested the Create Contract button only be available when the opportunity reach...
negotiation stage.
How should the administrator meet this requirement?

- A. Create a validation rule.
- B. Create a custom permission.
- C. Modify page layout.
- D. Configure dynamic action.

Answer: D

Explanation:
Dynamic actions are a way to conditionally display actions on a record page based on criteria such as field values, user profile, device type, or record type. Dynamic actions can help streamline the user interface and guide users to take the right actions at the right time. Dynamic actions can be used to show or hide the Create Contract button based on the opportunity stage value

NEW QUESTION # 129

An administrator is Informed that an employee has Just resigned and needs all access removed Immediately.
This user is the owner of 4,000 records and the sole recipient or 57 email alerts. Management will need at least a month to find a replacement. The email administrator has already revoked their email access.
What action should be taken to ensure the user's access is immediately revoked?

- A. Go into the user record and delete the user,
- B. Go into the user record and set the login hours to None'.
- C. Go into the user record and freeze the user.
- D. Go into the user record and uncheck the Lightning User checkbox.

Answer: C

Explanation:
Go into the user record and freeze the user is the action that should be taken to ensure the user's access is immediately revoked.
Freezing a user is a way to temporarily prevent a user from logging in to Salesforce without deactivating their user record or changing their profile. Freezing a user can be useful when an employee has resigned or left the company and their access needs to be removed

immediately. Freezing a user does not affect the ownership of records or email alerts that are assigned to them

NEW QUESTION # 130

The sales department has asked to limit access to the Amount field on the Opportunity to only tnose users. In the sales department and on the executtve team, Northern Trail Outfitters uses six custom profiles including Sales User. Marketing user, call Center user. Executive User Sales Manager user, ana call Center Manager user. Field level access is removed from three or the profiles In the sandbox.

What action should an administrator take to make sure this change is in production?

- A. Process a change set with the profiles that should no longer have access to the field.
- B. Create a sandbox template and push it to production to reflect the update.
- C. Deploy a change set from tht sandbox to prodUGBOfll including the Amount field with all the custom profiles.
- D. Manually restrict access to this field for each profile via Setup Just like the sandbox.

Answer: C

Explanation:

A change set is a tool that allows you to send customizations from one Salesforce org to another. A change set can contain components such as objects, fields, profiles, permission sets, workflows, and more. You can use change sets to migrate changes from a sandbox org to a production org or between two sandbox orgs that are affiliated with the same production org. In this case, you can deploy a change set from the sandbox to production that includes the Amount field and all the custom profiles that need access to it. This way, you can update the field-level security settings for the field on each profile in one deployment. References: https://help.
