ISA/IEC 62443 Cybersecurity Fundamentals Specialist Sample Questions (Q32-Q37):

NEW QUESTION # 32

What is one challenge associated with firewalls?

- A. Need for constant updates
- **B. Deciding how they should be configured**
- C. That they can only filter HTTP traffic
- D. Difficulty of installation

Answer: B

Explanation:

A significant challenge with firewalls in industrial environments is deciding how they should be configured.

The complexity arises from needing to balance operational requirements (such as process data flow) with security needs (such as blocking unauthorized access). Misconfiguration can lead either to security gaps or to unnecessary operational disruptions. Firewalls can filter many types of traffic (not just HTTP) and while updates are important, configuration is the biggest ongoing challenge.

Reference: ISA/IEC 62443-3-3:2013, Section 4.2.3.3 (Firewalls and configuration management); ISA/IEC 62443-2-1:2009, Section 6.3.2.

NEW QUESTION # 33

Which is a reason for and physical security regulations meeting a mixed resistance?

Available Choices (select all choices that are correct)

- A. Cybersecurity risks can best be managed individually and in isolation.
- **B. There are a limited number of enforced cybersecurity and physical security regulations.**
- C. Regulations contain only informative elements.
- D. Regulations are voluntary documents.

Answer: B

Explanation:

Cybersecurity and physical security regulations are intended to provide guidance and requirements for protecting industrial control systems from various threats and risks. However, these regulations may face mixed resistance from different stakeholders for various reasons. One of the reasons is that there are a limited number of enforced cybersecurity and physical security regulations, especially at the international level. This means that some regions or countries may have more stringent or comprehensive regulations than others, creating inconsistencies and challenges for cross-border cooperation and compliance. Moreover, some regulations may be outdated or not aligned with the current best practices and standards, such as ISA/IEC

62443, which may limit their effectiveness and applicability. Therefore, some organizations may prefer to follow voluntary standards or frameworks, such as ISA/IEC 62443, rather than mandatory regulations, as they may offer more flexibility and adaptability to the specific needs and contexts of each industrial control system.
