

Providing You 100% Pass-Rate JN0-253 Valid Exam Braindumps with 100% Passing Guarantee

DOWNLOAD the newest BraindumpQuiz JN0-253 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1NjkgyS87AvVkfCQ1CkBVk_mGnvqUjL-y

On the basis of the current social background and development prospect, the JN0-253 certifications have gradually become accepted prerequisites to stand out the most in the workplace. Our JN0-253 exam materials are pleased to serve you as such an exam tool to help you dream come true. With over a decade's endeavor, our JN0-253 practice materials successfully become the most reliable products in the industry. There is a great deal of advantages of our JN0-253 exam questions you can spare some time to get to know.

Now it is wise choice for you to choose our JN0-253 actual test guide materials. Valid exam questions help you study and prepare double results with half works. You will get high-quality 100% pass rate JN0-253 learning prep so that you can master the key knowledge and clear exam easily. You can Pass JN0-253 Exam in the shortest time and obtain a certification soon. It will benefit you more. Instead of admiring others' redoubtable life, start your new life from choosing valid test dumps. Our JN0-253 actual test guide is the pass king in this field which will be the best option for you.

Professional JN0-253 Valid Exam Braindumps & Trusted Valid JN0-253 Test Questions & New JN0-253 Reliable Study Guide

Do you like to practice study materials on paper? If you do, you can try our JN0-253 exam dumps. JN0-253 PDF version is printable, and you can study anywhere and anytime. We offer you free demo for you to have a try before buying, so that you can have a better understanding of JN0-253 Exam Dumps what you are going to buy. Free update for 365 days is available, and you can get the latest information about the JN0-253 exam dumps timely. The update version will be sent to your email automatically.

Juniper Mist AI, Associate (JNCIA-MistAI) Sample Questions (Q23-Q28):

NEW QUESTION # 23

You are asked to configure a site in Juniper Mist.
Which statement describes completing this step?

- A. You must configure the site within your organization.
- B. You must claim your site by scanning the access point's QR code.
- C. You must first configure the country, time zone, and location at the organization level.
- D. You must define your organization within the site.

Answer: A

Explanation:

You must configure the site within your organization-this is the correct process according to Juniper Mist's official configuration guides. When setting up a deployment, first an organization is created in the Mist cloud.

Within this organization, sites are added for each physical location. The Mist documentation says: "You can create Sites in the Juniper Mist portal from the Organization > Site Configuration menu. Add or update sites as needed." The configuration requires the site name, country, and location to be set at the site level-not the organization level. Claiming APs via QR codes and organization definition are separate steps in device onboarding and initial setup.

NEW QUESTION # 24

What is the purpose of assigning roles to switches?

- A. To configure WLANs
- B. To monitor network traffic
- C. To assign configurations at scale
- D. To manage user accounts

Answer: C

Explanation:

InJuniper Mist Wired Assurance, assigningrolesto switches is a key configuration mechanism for deploying consistent network policies across multiple devices. Switch roles act as logical identifiers that bind devices to specificconfiguration templatesorpolicy profiles, ensuring standardized setup and reducing manual configuration overhead.

According to theJuniper Mist Wired Assurance Configuration and Template Management Guide:

"Switch roles are used to group devices based on function or location and automatically apply predefined configuration templates and policies at scale." This enables administrators to:

- * Automatically assign VLANs, port profiles, and policies to multiple switches simultaneously.
- * Simplify deployment for large organizations with multiple sites.
- * Ensure uniform compliance with enterprise configuration standards.

Roles arenot usedto configure WLANs (wireless function), manage users, or directly monitor traffic - those tasks are handled through other Mist AI services.

Therefore, the correct answer isC. To assign configurations at scale.

NEW QUESTION # 25

Which statement is correct about the relationship between Juniper Mist organizations and sites?

- A. You must have one Juniper Mist superuser login for each site.
- B. A Juniper Mist superuser login grants access to all organizations.
- C. One Juniper Mist organization can contain multiple sites.
- D. One Juniper Mist site can contain multiple organizations.

Answer: C

Explanation:

According to the official Juniper Mist documentation on the configuration hierarchy, the platform uses a three- tier model:

Organization # Site # Device. At the organization level, you manage administrator accounts, subscriptions, and organization-wide settings. Then:

"An organization can include one or more sites. A site can represent a physical location or a logical subdivision of your enterprise or campus." Also, in the simpler case explanation:

"Each customer is created as a separate organization. Within that organization multiple sites can be created." Mist These statements make clear that the correct relationship is: one organization may have multiple sites under it.

The inverse - that a site might contain multiple organizations - is not supported in the documented hierarchy. Therefore option B is correct.

NEW QUESTION # 26

Which statement about Marvis Minis is correct?

- A. Marvis is an LLM that designs network infrastructure.
- B. Marvis provides Marvis Actions to simulate user connections.
- C. Marvis Minis is Juniper's onsite technical support team that troubleshoots enterprise access points.
- **D. Marvis Minis works with Juniper Mist AI to validate network configuration to optimize user experiences.**

Answer: D

Explanation:

Marvis Minis is a component of the Marvis Virtual Network Assistant (VNA) within the Juniper Mist AI ecosystem. It is designed to proactively ensure optimal network performance and user experience by running synthetic network tests using Mist-managed access points.

According to the Juniper Mist Marvis Minis Technical Overview, this feature allows APs to act as virtual clients that automatically simulate user connection flows, including authentication, DHCP, DNS, and application reachability. These tests validate that the network configuration and services are functioning as expected, even before real users experience issues.

The documentation states:

"Marvis Minis operates in conjunction with Mist AI to continuously validate network configurations and optimize user experience by identifying potential problems proactively."

"Using Mist APs, Marvis Minis performs synthetic transactions to verify the performance of wireless, wired, and WAN segments without requiring external devices." Hence, Marvis Minis is not a support team (A), not a design AI model (B), and Marvis Actions (C) is a different feature for identifying and resolving live issues. The accurate description is that Marvis Minis collaborates with Mist AI to validate configurations and optimize user experiences.

NEW QUESTION # 27

Which Juniper device is used in Routing Assurance?

- A. EX Series Switches
- **B. Session Smart Routers**
- C. SRX Series Firewalls
- D. MX Series

Answer: B

Explanation:

Routing Assurance is a feature of the Juniper Mist WAN Assurance solution, providing AI-driven visibility, analytics, and troubleshooting for Juniper Session Smart Routers (SSR) deployed in SD-WAN environments. The system monitors routing performance, link health, and application traffic to ensure reliable WAN connectivity and performance.

According to the Juniper Mist WAN Assurance and Routing Assurance Guide, the feature is described as:

"Routing Assurance provides continuous monitoring of routing operations and path decisions for Juniper Session Smart Routers, offering AI-driven insights into application routing behavior and WAN path health." The Session Smart Router (SSR) platform, powered by 128 Technology (acquired by Juniper Networks), is specifically designed for AI-driven, session-aware routing. It integrates seamlessly with Mist Cloud to:

- * Track routing changes and path selection decisions.
- * Correlate application experience with routing behavior.
- * Identify and remediate path-related issues automatically through Marvis AI.

Other devices serve different functions:

- * MX Series- Carrier-grade routing, not used in Mist Routing Assurance.
- * EX Series- Switches used for Wired Assurance.
- * SRX Series- Firewalls supporting WAN Assurance and security but not Routing Assurance.

Therefore, the correct answer is C. Session Smart Routers.
