To know well your level of Professional-Cloud-Security-Engineer Exam Preparation, we offer you the online test engine version which is an exam simulation to help you in knowing your weak point in Professional-Cloud-Security-Engineer practice test and therefore provide an opportunity to fulfill your deficiencies prior to Google real exam. Once there are latest versions released, we will send it to your email immediately.

The Google Professional-Cloud-Security-Engineer exam covers a wide range of topics related to cloud security, including security management, data protection, network security, compliance, and incident management. The candidates are expected to have a deep understanding of the security features and functionalities offered by GCP and know how to configure and manage these features. Professional-Cloud-Security-Engineer exam also tests the candidate's ability to design and implement secure solutions on GCP using industry best practices.

The Google Professional-Cloud-Security-Engineer exam is intended for individuals who have experience working with cloud security technologies and have an understanding of security concepts, including identity and access management, network security, encryption, and vulnerability management. Google Cloud Certified - Professional Cloud Security Engineer Exam certification is ideal for security professionals, solution architects, system administrators, and DevOps engineers who are working with Google Cloud Platform.

The Google Professional-Cloud-Security-Engineer Exam covers a range of topics, including designing and implementing security controls for cloud infrastructure, configuring and managing network security, implementing data protection measures, and managing incident response and disaster recovery. Candidates must demonstrate their ability to assess security risks and compliance requirements, and design and implement security solutions that meet these requirements. Professional-Cloud-Security-Engineer exam consists of multiple-choice and scenario-based questions, and candidates have two hours to complete it. Passing the exam requires a score of 75% or higher.

Professional-Cloud-Security-Engineer Latest Test Dumps | Pass-Sure Professional-Cloud-Security-Engineer: Google Cloud Certified - Professional Cloud Security Engineer Exam 100% Pass

Being scrupulous in this line over ten years, our experts are background heroes who made the high quality and high accuracy Professional-Cloud-Security-Engineer study quiz. By abstracting most useful content into the Professional-Cloud-Security-Engineer guide materials, they have helped former customers gain success easily and smoothly. We can claim that if you prepare with our Professional-Cloud-Security-Engineer Exam Braindumps for 20 to 30 hours, then you will be confident to pass the exam.

Google Cloud Certified - Professional Cloud Security Engineer Exam Sample Questions (Q114-Q119):

NEW QUESTION # 114

Your organization has two VPC Service Controls service perimeters, Perimeter-A and Perimeter-B, in Google Cloud. You want to allow data to be copied from a Cloud Storage bucket in Perimeter-A to another Cloud Storage bucket in Perimeter-B. You must minimize exfiltration risk, only allow required connections, and follow the principle of least privilege. What should you do?

- **A. Configure an egress rule for the Cloud Storage bucket in Perimeter-A and a corresponding ingress rule in Perimeter-B.**
- B. Configure a bidirectional egress/ingress rule for the Cloud Storage buckets in Perimeter-A and Perimeter-B.
- C. Configure a perimeter bridge between Perimeter-A and Perimeter-B, and specify the Cloud Storage buckets as the resources involved.
- D. Configure a perimeter bridge between the projects hosting the Cloud Storage buckets in Perimeter-A and Perimeter-B.

Answer: A

NEW QUESTION # 115

Your company has deployed an application on Compute Engine. The application is accessible by clients on port 587. You need to balance the load between the different instances running the application. The connection should be secured using TLS, and terminated by the Load Balancer.

What type of Load Balancing should you use?

- A. Network Load Balancing
- B. HTTP(S) Load Balancing
- C. TCP Proxy Load Balancing
- **D. SSL Proxy Load Balancing**

Answer: D

Explanation:

Explanation/Reference: <https://cloud.google.com/load-balancing/docs/ssl/>

NEW QUESTION # 116

You are onboarding new users into Cloud Identity and discover that some users have created consumer user accounts using the corporate domain name. How should you manage these consumer user accounts with Cloud Identity?

- A. Use Google Cloud Directory Sync to convert the unmanaged user accounts.

- B. Use the transfer tool for unmanaged user accounts.
- C. Configure single sign-on using a customer's third-party provider.
- D. Create a new managed user account for each consumer user account.

Answer: B

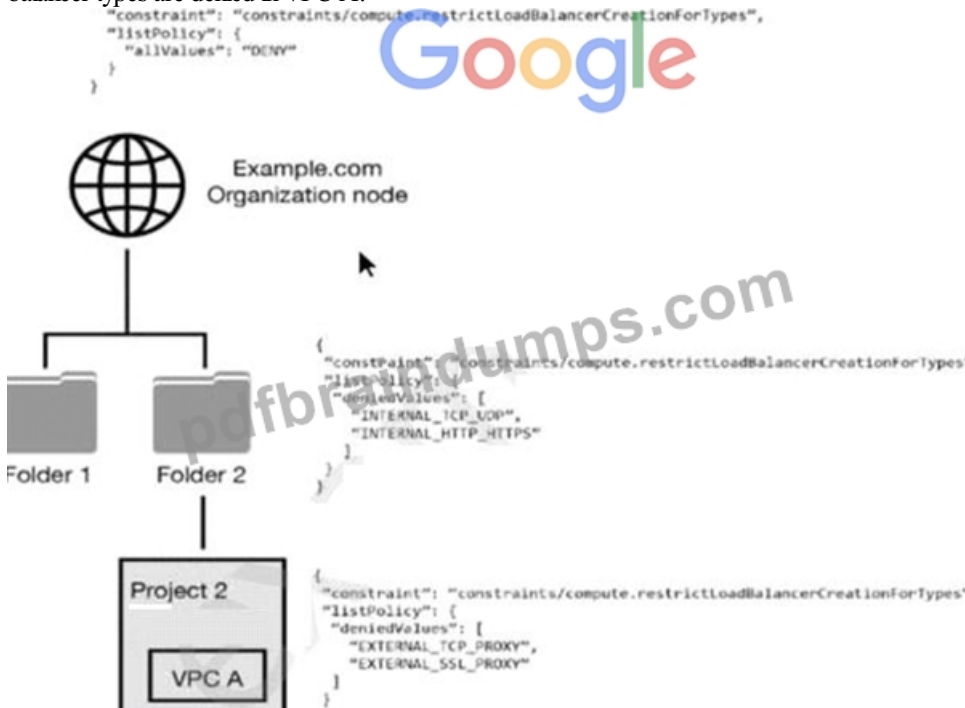

Explanation:

<https://support.google.com/a/answer/6178640?hl=en>

The transfer tool enables you to see what unmanaged users exist, and then invite those unmanaged users to the domain.

NEW QUESTION # 117

You have the following resource hierarchy. There is an organization policy at each node in the hierarchy as shown. Which load balancer types are denied in VPC A?

- A. INTERNAL_TCP_UDP, INTERNAL_HTTP_HTTPS is denied in accordance with the folder's policy.
- B. EXTERNAL_TCP_PROXY, EXTERNAL_SSL_PROXY, INTERNAL_TCP_UDP, and INTERNAL_HTTP_HTTPS are denied in accordance with the folder and project's policies.
- C. All load balancer types are denied in accordance with the global node's policy.
- D. EXTERNAL_TCP_PROXY, EXTERNAL_SSL_PROXY are denied in accordance with the project's policy.

Answer: B

NEW QUESTION # 118

An engineering team is launching a web application that will be public on the internet. The web application is hosted in multiple GCP regions and will be directed to the respective backend based on the URL request.

Your team wants to avoid exposing the application directly on the internet and wants to deny traffic from a specific list of malicious IP addresses Which solution should your team implement to meet these requirements?

- A. NAT Gateway
- B. Network Load Balancing
- C. SSL Proxy Load Balancing
- D. Cloud Armor

Answer: D

Explanation:

<https://cloud.google.com/armor/docs/security-policy-overview#edge-security>

NEW QUESTION # 119

.....

Our Professional-Cloud-Security-Engineer study guide in order to allow the user to form a complete system of knowledge structure, the qualification examination of test interpretation and supporting course practice organic reasonable arrangement together, the Professional-Cloud-Security-Engineer simulating materials let the user after learning the section, and each section between cohesion and is closely linked, for users who use the Professional-Cloud-Security-Engineer training quiz to build a knowledge of logical framework to create a good condition.
