Oracle APEX Cloud Developer Professional Sample Questions (Q12-Q17):

NEW QUESTION # 12

Which statement is true about the Data Workshop utility?

- A. You cannot load data from an XLSX file with multiple worksheets.
- **B. The wizards load and unload table data only.**
- C. You can load or unload multiple tables at a time.
- D. The wizards load and unload all types of schema objects.

Answer: B

Explanation:

The Data Workshop utility in APEX is designed to load and unload table data only, not other schema objects like procedures or views. Option A is false because XLSX files with multiple worksheets are supported (each worksheet can be mapped to a table). Option B is incorrect as it's limited to table data. Option D is partially true but not the most precise answer, as "multiple tables at a time" depends on the process, whereas C is universally accurate.

NEW QUESTION # 13

Which API can be used to send Push Notifications immediately in Oracle APEX?

- A. APEX_PWA.PUSH_QUEUE
- B. APEX_PWA.HAS_PUSH_SUBSCRIPTION
- C. APEX_PWA.PURGE_QUEUE

Answer: A

Explanation:

The APEX_PWA package manages Push Notifications:

B . APEX_PWA.PUSH_QUEUE: This procedure forces immediate processing of the Push Notification queue, sending queued messages (added via APEX_PWA.SEND) to subscribed devices without waiting for the default scheduler (e.g., every 5 minutes).

Example: APEX_PWA.PUSH_QUEUE; ensures a "Meeting now!" alert goes out instantly.

A . APEX_PWA.HAS_PUSH_SUBSCRIPTION: Checks if a user has an active subscription (returns BOOLEAN), not for sending.

C . APEX_PWA.PURGE_QUEUE: Clears the queue, discarding unsent messages, not sending them.

Technical Insight: PUSH_QUEUE triggers a job to contact the push service (e.g., Firebase), using VAPID keys from the PWA configuration.

Use Case: Urgent alerts (e.g., system outage) need immediate delivery, bypassing delays.

Pitfall: Overuse can strain the server; use judiciously for time-sensitive messages.

NEW QUESTION # 14

Which statement is true about Theme Styles in Oracle APEX?

- A. Theme Styles control the layout of a webpage.
- B. The "Is Current" attribute of a Theme Style depends on the "Read Only" attribute.
- C. When the Is Public attribute is enabled, end users can choose the Theme Style from the runtime environment.

Answer: C

Explanation:

Theme Styles define visual aspects (e.g., colors, fonts) in APEX:

B . When the Is Public attribute is enabled: Setting "Is Public" to "Yes" allows end users to select from available Theme Styles at runtime (e.g., via a UI switcher), enhancing customization.

A . Control the layout: False; layout is managed by templates and regions, not Theme Styles, which focus on aesthetics.

C . "Is Current" depends on "Read Only": False; "Is Current" marks the active style, independent of "Read Only" (which locks editing).

Practical note: Public styles require multiple defined styles in Shared Components.

NEW QUESTION # 15

Which client credentials are used for authentication during the 'Check Syntax' process?

- A. Database schema credentials
- B. APEX Workspace Admin credentials
- C. APEX Developer credentials

Answer: A

Explanation:

The "Check Syntax" process in APEX, typically used in SQL Workshop or when validating code, authenticates using Database schema credentials. These are the credentials of the schema associated with the APEX workspace (e.g., username/password of the schema like "HR"). This ensures the process has access to parse and validate SQL or PL/SQL against the database objects in that schema.

APEX Workspace Admin credentials: These are for managing workspaces, not executing database-level syntax checks.

APEX Developer credentials: These authenticate developers into the APEX IDE, not the database runtime environment.

This design aligns with APEX's security model, where database operations are tied to the schema, ensuring accurate validation and error reporting (e.g., missing privileges or invalid objects).

NEW QUESTION # 16

You need to ensure that "How may I help you today?" is the first message displayed by the AI assistant. Which attribute of the Show AI Assistant Dynamic Action should be configured in the Property Editor to achieve this?

- A. Welcome Message
- B. Initial Prompt
- C. AI Assistant Name

Answer: A

Explanation:

The Show AI Assistant Dynamic Action in Oracle APEX triggers the display of the AI Assistant interface. To customize the first message users see:

Welcome Message: This attribute in the Property Editor defines the initial text displayed when the AI Assistant appears. Setting it to "How may I help you today?" ensures this exact phrase greets users, enhancing user experience by setting a friendly tone. It's a static, developer-defined string, distinct from AI-generated responses.

Initial Prompt: This attribute defines the starting input or context sent to the AI model, not the visible message shown to users. It's typically hidden and used to guide the AI's behavior (e.g., "Act as a support agent").

AI Assistant Name: This sets the assistant's identity (e.g., "Alex"), displayed in the UI, but it's not the greeting message.

This configuration is critical for branding or guiding user interaction from the outset, and it's adjustable per dynamic action instance, offering flexibility across pages.
