NEW QUESTION # 20

How does DBot score an indicator that has multiple reputation scores?

- A. uses the most severe score scores
- B. the reputation as undefined
- C. uses the least severe score
- D. uses the average score

Answer: A

NEW QUESTION # 21

What is the size of the free Cortex Data Lake instance provided to a customer who has activated a TMS tenant, but has not purchased a Cortex Data Lake instance?

- A. 10 GB
- B. 1 TB
- C. 10 TB
- D. 100 GB

Answer: D

Explanation:

Cortex Data Lake (often referred to as Strata Logging Service in some contexts) is Palo Alto Networks' cloud-based storage solution that centralizes security data for products like Cortex XDR, Prisma Access, and NGFWs. The question involves a customer who has activated a TMS (Tenant Management Service) tenant but has not purchased a Cortex Data Lake instance. TMS is part of the Palo Alto Networks ecosystem for managing tenants and services, typically associated with Cortex or Prisma deployments. Let's break this down to determine the size of the free Cortex Data Lake instance provided in this scenario.

Understanding TMS and Cortex Data Lake:

* TMS Tenant: The Tenant Management Service is a framework used to manage multiple tenants or instances within Palo Alto Networks' cloud services (e.g., Cortex XDR, Prisma Access). Activating a TMS tenant implies the customer has initialized a management structure but hasn't committed to a full Cortex Data Lake purchase.

* Free Cortex Data Lake Instance: Palo Alto Networks provides a limited, free tier of Cortex Data Lake storage to customers who activate certain services or products, allowing them to evaluate functionality or store minimal data before committing to a paid license.

Free Storage Allocation:

When a customer activates a TMS tenant without purchasing a Cortex Data Lake instance, Palo Alto Networks allocates a default free storage capacity to enable basic functionality. According to official documentation and standard practices:

* The free Cortex Data Lake instance provides 100 GB of storage.

* This amount is intended for initial use cases, such as storing logs from a small number of endpoints (e.g., Cortex XDR Prevent agents), firewall logs, or trial data during evaluation periods.

Option Analysis:

* A. 10 GB:

* Analysis: 10 GB is too small to be a meaningful free tier for a product like Cortex Data Lake, which is designed to handle security telemetry from endpoints, networks, or cloud services. Even basic log storage for a few devices over a short period would exceed this quickly.

* Conclusion: Incorrect.

* B. 1 TB:

* Analysis: 1 TB (1,000 GB) is a substantial amount of storage, typically associated with paid Cortex Data Lake subscriptions rather than a free tier. Offering this much for free would undermine the paid licensing model.

* Conclusion: Incorrect.

* C. 10 TB:

* Analysis: 10 TB is even larger and aligns with enterprise-scale paid deployments, not a free instance. This size is far beyond what's provided without a purchase.

* Conclusion: Incorrect.

* D. 100 GB:

* Analysis: 100 GB is the documented size of the free Cortex Data Lake instance provided to customers who activate a tenant (e.g., via TMS) without purchasing additional storage. It's sufficient for small-scale testing, such as storing logs from a handful of Cortex XDR agents or firewall data for a limited retention period (e.g., 30 days).

* Conclusion: Correct.

Supporting Context:

* Cortex XDR Example: For Cortex XDR Prevent customers, activating a tenant includes 100 GB of free Cortex Data Lake storage for 30 days of alert data (not full telemetry, which requires XDR Pro).

This aligns with the TMS scenario, where basic tenant activation triggers the same free tier.

* Prisma Access: Similarly, Prisma Access customers activating a tenant without a purchased Data Lake instance receive 100 GB for initial log storage.

* Documentation: While exact wording may vary, Palo Alto Networks consistently references 100 GB as the free tier across product activation guides.

NEW QUESTION # 24

Why is it important to document notes from the Proof of Value (POV) for post-sales hand off?

- A. To certify that the POV was completed and meets all customer requirements
- B. To allow implementation teams to bypass scoping exercises and shorten delivery time
- C. To generate additional training material for the POV's production implementation
- D. To ensure the implementation teams understand the customer use cases and priorities

Answer: D

Explanation:

Documenting notes from the Proof of Value (POV) is crucial for the post-sales handoff because it helps ensure that implementation teams understand the customer use cases and priorities. This documentation provides context for the customer's specific needs, enabling a smoother and more tailored implementation process.
