

# PSE-Strata-Pro-24 Free Exam - PSE-Strata-Pro-24 VCE Dumps

BTW, DOWNLOAD part of PracticeMaterial PSE-Strata-Pro-24 dumps from Cloud Storage: [https://drive.google.com/open?id=1FAB65exxfHNjpc1DnkL0KkEg\\_50o0nYA](https://drive.google.com/open?id=1FAB65exxfHNjpc1DnkL0KkEg_50o0nYA)

The Palo Alto Networks Systems Engineer Professional - Hardware Firewall (PSE-Strata-Pro-24) practice questions (desktop and web-based) are customizable, meaning users can set the questions and time according to their needs to improve their discipline and feel the real-based exam scenario to pass the Palo Alto Networks PSE-Strata-Pro-24 Certification. Customizable mock tests comprehensively and accurately represent the actual Palo Alto Networks Systems Engineer Professional - Hardware Firewall (PSE-Strata-Pro-24) certification exam scenario.

With the principles of customers first and service first, we will offer you the most considerate service. Free update for 365 days, and if you do have some questions about the PSE-Strata-Pro-24 exam braindumps, you can ask the live chat service stuff for help or you can contact us by email, we will answer your questions immediately, and if you have any good suggestion of the PSE-Strata-Pro-24 Exam Braindumps, we will be glad to accept. The PSE-Strata-Pro-24 exam dumps is professional and helpful, it will benefit you a lot.

## Palo Alto Networks PSE-Strata-Pro-24 VCE Dumps - Valid PSE-Strata-Pro-24 Vce Dumps

We don't just want to make profitable deals, but also to help our users pass the exams with the least amount of time to get PSE-Strata-Pro-24 certificate. Choosing our PSE-Strata-Pro-24 exam practice, you only need to spend 20-30 hours to prepare for the exam. Maybe you will ask whether such a short time can finish all the content, we want to tell you that you can rest assured, because our PSE-Strata-Pro-24 Learning Materials are closely related to the exam outline and the questions of our PSE-Strata-Pro-24 guide questions are related to the latest and basic knowledge. You will pass the PSE-Strata-Pro-24 exam only with our PSE-Strata-Pro-24 exam questions.

## Palo Alto Networks PSE-Strata-Pro-24 Exam Syllabus Topics:

---

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Business Value and Competitive Differentiators: This section of the exam measures the skills of Technical Business Value Analysts and focuses on identifying the value proposition of Palo Alto Networks Next-Generation Firewalls (NGFWs). Candidates will assess the technical business benefits of tools like Panorama and SCM. They will also recognize customer-relevant topics and align them with Palo Alto Networks' best solutions. Additionally, understanding Strata's unique differentiators is a key component of this domain.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Deployment and Evaluation: This section of the exam measures the skills of Deployment Engineers and focuses on identifying the capabilities of Palo Alto Networks NGFWs. Candidates will evaluate features that protect against both known and unknown threats. They will also explain identity management from a deployment perspective and describe the proof of value (PoV) process, which includes assessing the effectiveness of NGFW solutions.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Architecture and Planning: This section of the exam measures the skills of Network Architects and emphasizes understanding customer requirements and designing suitable deployment architectures. Candidates must explain Palo Alto Networks' platform networking capabilities in detail and evaluate their suitability for various environments. Handling aspects like system sizing and fine-tuning is also a critical skill assessed in this domain.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Network Security Strategy and Best Practices: This section of the exam measures the skills of Security Strategy Specialists and highlights the importance of the Palo Alto Networks five-step Zero Trust methodology. Candidates must understand how to approach and apply the Zero Trust model effectively while emphasizing best practices to ensure robust network security.</li> </ul>

## Palo Alto Networks Systems Engineer Professional - Hardware Firewall Sample Questions (Q40-Q45):

### NEW QUESTION # 40

There are no Advanced Threat Prevention log events in a company's SIEM instance. However, the systems administrator has confirmed that the Advanced Threat Prevention subscription is licensed and that threat events are visible in the threat logs on the firewall.

Which action should the systems administrator take next?

- A. Have the SIEM vendor troubleshoot its software.
- B. Enable the company's Threat Prevention license.
- C. Ensure the Security policy rules that use Advanced Threat Prevention are set for log forwarding to the correct SIEM.**
- D. Check with the SIEM vendor to verify that Advanced Threat Prevention logs are reaching the company's SIEM instance.

**Answer: C**

Explanation:

\* Understanding the Problem:

\* The issue is that Advanced Threat Prevention (ATP) logs are visible on the firewall but are not being ingested into the company's SIEM.

\* This implies that the ATP subscription is working and generating logs on the firewall but the logs are not being forwarded properly to the SIEM.

\* Action to Resolve:

\* Log Forwarding Configuration:

\* Verify that the Security policy rules configured to inspect traffic using Advanced Threat Prevention are set to forward logs to the SIEM instance.

\* This is a common oversight. Even if the logs are generated locally, they will not be forwarded unless explicitly configured.

\* Configuration steps to verify in the Palo Alto Networks firewall:

\* Go to Policies > Security Policies and check the "Log Forwarding" profile applied.

\* Ensure the "Log Forwarding" profile includes the correct settings to forward Threat Logs to the SIEM.

\* Go to Device > Log Settings and ensure the firewall is set to forward Threat logs to the desired Syslog or SIEM destination.

\* Why Not the Other Options?

\* A (Enable the Threat Prevention license):

- \* The problem does not relate to the license; the administrator already confirmed the license is active.
  - \* B (Check with the SIEM vendor):
  - \* While verifying SIEM functionality is important, the first step is to ensure the logs are being forwarded correctly from the firewall to the SIEM. This is under the systems administrator's control.
  - \* C (Have the SIEM vendor troubleshoot):
  - \* This step should only be taken after confirming the logs are forwarded properly from the firewall.
- References from Palo Alto Networks Documentation:
- \* Log Forwarding and Security Policy Configuration
  - \* Advanced Threat Prevention Configuration Guide

#### NEW QUESTION # 41

Which statement appropriately describes performance tuning Intrusion Prevention System (IPS) functions on a Palo Alto Networks NGFW running Advanced Threat Prevention?

- A. Leave all signatures turned on because they do not impact performance.
- B. To increase performance, disable any threat signatures that do not apply to the environment.
- C. Work with TAC to run a debug and receive exact measurements of performance utilization for the IPS.
- **D. Create a new threat profile to use only signatures needed for the environment.**

**Answer: D**

Explanation:

- \* Create a New Threat Profile (Answer B):
  - \* Performance tuning in Intrusion Prevention System (IPS) involves ensuring that only the most relevant and necessary signatures are enabled for the specific environment.
  - \* Palo Alto Networks allows you to create custom threat profiles to selectively enable signatures that match the threats most likely to affect the environment. This reduces unnecessary resource usage and ensures optimal performance.
  - \* By tailoring the signature set, organizations can focus on real threats without impacting overall throughput and latency.
  - \* Why Not A:
  - \* Leaving all signatures turned on is not a best practice because it may consume excessive resources, increasing processing time and degrading firewall performance, especially in high-throughput environments.
  - \* Why Not C:
  - \* While working with TAC for debugging may help identify specific performance bottlenecks, it is not a recommended approach for routine performance tuning. Instead, proactive configuration changes, such as creating tailored threat profiles, should be made.
  - \* Why Not D:
  - \* Disabling irrelevant threat signatures can improve performance, but this task is effectively accomplished by creating a new threat profile. Manually disabling signatures one by one is not scalable or efficient.
- References from Palo Alto Networks Documentation:
- \* Threat Prevention Best Practices
  - \* Custom Threat Profile Configuration

#### NEW QUESTION # 42

Device-ID can be used in which three policies? (Choose three.)

- **A. Quality of Service (QoS)**
- **B. Decryption**
- C. Policy-based forwarding (PBF)
- **D. Security**
- E. SD-WAN

**Answer: A,B,D**

Explanation:

The question asks about the policies where Device-ID, a feature of Palo Alto Networks NGFWs, can be applied. Device-ID enables the firewall to identify and classify devices (e.g., IoT, endpoints) based on attributes like device type, OS, or behavior, enhancing policy enforcement. Let's evaluate its use across the specified policy types.

Step 1: Understand Device-ID

Device-ID leverages the IoT Security subscription and integrates with the Strata Firewall to provide device visibility and control. It uses data from sources like DHCP, HTTP headers, and machine learning to identify devices and allows policies to reference device

objects (e.g., "IP Camera," "Medical Device"). This feature is available on PA-Series firewalls running PAN-OS 10.0 or later with the appropriate license.

#### NEW QUESTION # 43

What does Policy Optimizer allow a systems engineer to do for an NGFW?

- A. Act as a migration tool to import policies from third-party vendors
- B. Recommend best practices on new policy creation
- **C. Identify Security policy rules with unused applications**
- D. Show unused licenses for Cloud-Delivered Security Services (CDSS) subscriptions and firewalls

**Answer: C**

Explanation:

Policy Optimizer is a feature designed to help administrators improve the efficiency and effectiveness of security policies on Palo Alto Networks Next-Generation Firewalls (NGFWs). It focuses on identifying unused or overly permissive policies to streamline and optimize the configuration.

\* Why "Identify Security policy rules with unused applications" (Correct Answer C)? Policy Optimizer provides visibility into existing security policies and identifies rules that have unused or outdated applications. For example:

\* It can detect if a rule allows applications that are no longer in use.

\* It can identify rules with excessive permissions, enabling administrators to refine them for better security and performance. By addressing these issues, Policy Optimizer helps reduce the attack surface and improves the overall manageability of the firewall.

\* Why not "Recommend best practices on new policy creation" (Option A)? Policy Optimizer focuses on optimizing existing policies, not creating new ones. While best practices can be applied during policy refinement, recommending new policy creation is not its purpose.

\* Why not "Show unused licenses for Cloud-Delivered Security Services (CDSS) subscriptions and firewalls" (Option B)? Policy Optimizer is not related to license management or tracking. Identifying unused licenses is outside the scope of its functionality.

\* Why not "Act as a migration tool to import policies from third-party vendors" (Option D)? Policy Optimizer does not function as a migration tool. While Palo Alto Networks offers tools for third-party firewall migration, this is separate from the Policy Optimizer feature.

Reference: The Palo Alto Networks Policy Optimizer documentation highlights its primary function of identifying unused or overly broad policy rules to optimize firewall configurations.

#### NEW QUESTION # 44

What are two methods that a NGFW uses to determine if submitted credentials are valid corporate credentials? (Choose two.)

- A. WMI client probing
- **B. Group mapping**
- C. LDAP query
- **D. Domain credential filter**

**Answer: B,D**

#### NEW QUESTION # 45

.....

These formats are Palo Alto Networks PSE-Strata-Pro-24 PDF dumps, web-based practice test software, and desktop practice test software. All these three Palo Alto Networks Systems Engineer Professional - Hardware Firewall (PSE-Strata-Pro-24) exam questions contain the real, valid, and updated Palo Alto Networks Exams that will provide you with everything that you need to learn, prepare and pass the challenging but career advancement PSE-Strata-Pro-24 Certification Exam with good scores.
