

PSE-Strata-Pro-24 Valid Test Vce Free & Actual PSE-Strata-Pro-24 Test Answers

SAP C_ACTIVATE22 SAP Certified Associate - SAP Activate Project Manager

Valid Test C_ACTIVATE22 Vce Free, C_ACTIVATE22 Test Engine

Any online version being suitable to all kinds of digital equipment is supportive to offline candidates in the condition that you practice it without making data. These versions of C_ACTIVATE22 test guide make our customers instantly happy. So they are great C_ACTIVATE22 test guide with high appreciation. Our C_ACTIVATE22 Test guide is famous with its good quality of questions for your reference. After your practice and regular review of our C_ACTIVATE22 exam questions the achievement will be obvious, and your skills of the exam will be improved greatly.

As you know, the first class quality always comes with the first service. That is exactly what describe our C_ACTIVATE22 exam materials. So only that our C_ACTIVATE22 training guide can attract you for its best quality, not also you will be touched by the excellent service. If you have any question about our C_ACTIVATE22 Learning Engine, our service will give you the best profession in suggestion and help. And we want to tell you, so you can always find us at account@itpassleader.com.

Valid Test C_ACTIVATE22 Vce Free

Quiz SAP - Reliable C_ACTIVATE22 - Valid Test SAP Certified Associate - SAP Activate Project Manager Vce Free

Are you ready to gain all these C_ACTIVATE22 certification benefits? Looking for a simple, smart, and quick way to pass the challenging C_ACTIVATE22 exam? If your answer is yes then you need to enroll in the C_ACTIVATE22 exam and prepare well to reach this C_ACTIVATE22 exam with good scores. In this latest advancement journey you can get help from ProPassway. The ProPassway will provide you with real, updated, and effective SAP C_ACTIVATE22 Exam Dumps that will enable you to pass the final C_ACTIVATE22 exam easily.

Valid Test C_ACTIVATE22 Vce Free, C_ACTIVATE22 Test Engine

The ITPassLeader is committed to helping you crack the Palo Alto Networks PSE-Strata-Pro-24 certification exam on the first attempt. To get this objective we offer the most probable, real, and updated Palo Alto Networks Palo Alto Networks Systems Engineer Professional - Hardware Firewall exam dumps in three user-friendly formats. These formats of Palo Alto Networks Systems Engineer Professional - Hardware Firewall in Procurement and Supply Palo Alto Networks updated practice material are, Palo Alto Networks Systems Engineer Professional - Hardware Firewall PSE-Strata-Pro-24 in Procurement and Supply Palo Alto Networks PDF file, desktop Palo Alto Networks PSE-Strata-Pro-24 practice test software, and Palo Alto Networks PSE-Strata-Pro-24 web-based practice test.

Palo Alto Networks PSE-Strata-Pro-24 Exam Syllabus Topics:

Topic	Details
Topic 1	• Network Security Strategy and Best Practices: This section of the exam measures the skills of Security Strategy Specialists and highlights the importance of the Palo Alto Networks five-step Zero Trust methodology. Candidates must understand how to approach and apply the Zero Trust model effectively while emphasizing best practices to ensure robust network security.

Topic 2	• Deployment and Evaluation: This section of the exam measures the skills of Deployment Engineers and focuses on identifying the capabilities of Palo Alto Networks NGFWs. Candidates will evaluate features that protect against both known and unknown threats. They will also explain identity management from a deployment perspective and describe the proof of value (PoV) process, which includes assessing the effectiveness of NGFW solutions.
Topic 3	• Architecture and Planning: This section of the exam measures the skills of Network Architects and emphasizes understanding customer requirements and designing suitable deployment architectures. Candidates must explain Palo Alto Networks' platform networking capabilities in detail and evaluate their suitability for various environments. Handling aspects like system sizing and fine-tuning is also a critical skill assessed in this domain.
Topic 4	• Business Value and Competitive Differentiators: This section of the exam measures the skills of Technical Business Value Analysts and focuses on identifying the value proposition of Palo Alto Networks Next-Generation Firewalls (NGFWs). Candidates will assess the technical business benefits of tools like Panorama and SCM. They will also recognize customer-relevant topics and align them with Palo Alto Networks' best solutions. Additionally, understanding Strata's unique differentiators is a key component of this domain.

Actual PSE-Strata-Pro-24 Test Answers, PSE-Strata-Pro-24 Reliable Test Testking

Currently we release the latest PSE-Strata-Pro-24 reliable exam answers for the test which not only cover the accurate study guide but also include more than 80% questions and answers of the real test. If it is still difficult for you to pass exam, or if you are urgent to clear exam in a short at first attempt, our PSE-Strata-Pro-24 Reliable Exam Answers will be your only valid choice. Don't hesitate again. Our buyers are companies and candidates from all over the world. It is the best methods for passing exam.

Palo Alto Networks Systems Engineer Professional - Hardware Firewall Sample Questions (Q38-Q43):

NEW QUESTION # 38

What are two methods that a NGFW uses to determine if submitted credentials are valid corporate credentials? (Choose two.)

- A. WMI client probing
- B. LDAP query
- C. Domain credential filter
- D. Group mapping

Answer: B,C

Explanation:

* LDAP Query (Answer B):

* Palo Alto Networks NGFWs can query LDAP directories (such as Active Directory) to validate whether submitted credentials match the corporate directory.

* Domain Credential Filter (Answer C):

* The Domain Credential Filter feature ensures that submitted credentials are checked against valid corporate credentials, preventing credential misuse.

* Why Not A:

* Group mapping is used to identify user groups for policy enforcement but does not validate submitted credentials.

* Why Not D:

* WMI client probing is used for user identification but is not a method for validating submitted credentials.

References from Palo Alto Networks Documentation:

* Credential Theft Prevention

NEW QUESTION # 39

A security engineer has been tasked with protecting a company's on-premises web servers but is not authorized to purchase a web application firewall (WAF).

Which Palo Alto Networks solution will protect the company from SQL injection zero-day, command injection zero-day, Cross-Site Scripting (XSS) attacks, and IIS exploits?

- **A. Advanced Threat Prevention and PAN-OS 11.x**
- B. Advanced WildFire and PAN-OS 10.0 (and higher)
- C. Threat Prevention and PAN-OS 11.x
- D. Threat Prevention, Advanced URL Filtering, and PAN-OS 10.2 (and higher)

Answer: A

Explanation:

Protecting web servers from advanced threats like SQL injection, command injection, XSS attacks, and IIS exploits requires a solution capable of deep packet inspection, behavioral analysis, and inline prevention of zero-day attacks. The most effective solution here is Advanced Threat Prevention (ATP) combined with PAN-OS 11.x.

* Why "Advanced Threat Prevention and PAN-OS 11.x" (Correct Answer B)? Advanced Threat Prevention (ATP) enhances traditional threat prevention by using inline deep learning models to detect and block advanced zero-day threats, including SQL injection, command injection, and XSS attacks.

With PAN-OS 11.x, ATP extends its detection capabilities to detect unknown exploits without relying on signature-based methods. This functionality is critical for protecting web servers in scenarios where a dedicated WAF is unavailable.

ATP provides the following benefits:

* Inline prevention of zero-day threats using deep learning models.

* Real-time detection of attacks like SQL injection and XSS.

* Enhanced protection for web server platforms like IIS.

* Full integration with the Palo Alto Networks Next-Generation Firewall (NGFW).

* Why not "Threat Prevention and PAN-OS 11.x" (Option A)? Threat Prevention relies primarily on signature-based detection for known threats. While it provides basic protection, it lacks the capability to block zero-day attacks using advanced methods like inline deep learning. For zero-day SQL injection and XSS attacks, Threat Prevention alone is insufficient.

* Why not "Threat Prevention, Advanced URL Filtering, and PAN-OS 10.2 (and higher)" (Option C)? While this combination includes Advanced URL Filtering (useful for blocking malicious URLs associated with exploits), it still relies on Threat Prevention, which is signature-based. This combination does not provide the zero-day protection needed for advanced injection attacks or XSS vulnerabilities.

* Why not "Advanced WildFire and PAN-OS 10.0 (and higher)" (Option D)? Advanced WildFire is focused on analyzing files and executables in a sandbox environment to identify malware. While it is excellent for identifying malware, it is not designed to provide inline prevention for web-based injection attacks or XSS exploits targeting web servers.

NEW QUESTION # 40

In which two locations can a Best Practice Assessment (BPA) report be generated for review by a customer? (Choose two.)

- **A. PANW Partner Portal**
- B. AIOps
- **C. Customer Support Portal**
- D. Strata Cloud Manager (SCM)

Answer: A,C

Explanation:

The Best Practice Assessment (BPA) report evaluates firewall and Panorama configurations against Palo Alto Networks' best practice recommendations. It provides actionable insights to improve the security posture of the deployment. BPA reports can be generated from the following locations:

* Why "PANW Partner Portal" (Correct Answer A)? Partners with access to the Palo Alto Networks Partner Portal can generate BPA reports for customers as part of their service offerings. This allows partners to assess and demonstrate compliance with best practices.

* Why "Customer Support Portal" (Correct Answer B)? Customers can log in to the Palo Alto Networks Customer Support Portal to generate their own BPA reports. This enables organizations to self-assess and improve their firewall configurations.

* Why not "AIOps" (Option C)? While AIOps provides operational insights and best practice recommendations, it does not generate full BPA reports. BPA and AIOps are distinct tools within the Palo Alto Networks ecosystem.

* Why not "Strata Cloud Manager (SCM)" (Option D)? Strata Cloud Manager is designed for managing multiple Palo Alto Networks cloud-delivered services and NGFWs but does not currently support generating BPA reports. BPA is limited to the Partner Portal and Customer Support Portal.

NEW QUESTION # 41

A customer has acquired 10 new branch offices, each with fewer than 50 users and no existing firewall.

The systems engineer wants to recommend a PA-Series NGFW with Advanced Threat Prevention at each branch location. Which NGFW series is the most cost-efficient at securing internet traffic?

- A. PA-600
- B. PA-200
- C. PA-500
- **D. PA-400**

Answer: D

Explanation:

The PA-400 Series is the most cost-efficient Palo Alto Networks NGFW for small branch offices. Let's analyze the options:

PA-400 Series (Recommended Option)

* The PA-400 Series (PA-410, PA-415, etc.) is specifically designed for small to medium-sized branch offices with fewer than 50 users.

* It provides all the necessary security features, including Advanced Threat Prevention, at a lower price point compared to higher-tier models.

* It supports PAN-OS and Cloud-Delivered Security Services (CDSS), making it suitable for securing internet traffic at branch locations.

Why Other Options Are Incorrect

* PA-200: The PA-200 is an older model and is no longer available. It lacks the performance and features needed for modern branch office security.

* PA-500: The PA-500 is also an older model that is not as cost-efficient as the PA-400 Series.

* PA-600: The PA-600 Series does not exist.

Key Takeaways:

* For branch offices with fewer than 50 users, the PA-400 Series offers the best balance of cost and performance.

NEW QUESTION # 42

A company with Palo Alto Networks NGFWs protecting its physical data center servers is experiencing a performance issue on its Active Directory (AD) servers due to high numbers of requests and updates the NGFWs are placing on the servers. How can the NGFWs be enabled to efficiently identify users without overloading the AD servers?

- **A. Configure Cloud Identity Engine to learn the users' IP address-user mappings from the AD authentication logs.**
- B. Configure data redistribution to redistribute IP address-user mappings from a hub NGFW to the other spoke NGFWs.
- C. Configure an NGFW as a GlobalProtect gateway, then have all users run GlobalProtect Windows SSO to gather user information.
- D. Configure an NGFW as a GlobalProtect gateway, then have all users run GlobalProtect agents to gather user information.

Answer: A

Explanation:

When high traffic from Palo Alto Networks NGFWs to Active Directory servers causes performance issues, optimizing the way NGFWs gather user-to-IP mappings is critical. Palo Alto Networks offers multiple ways to collect user identity information, and Cloud Identity Engine provides a solution that reduces the load on AD servers while still ensuring efficient and accurate mapping.

* Option A (Correct): Cloud Identity Engine allows NGFWs to gather user-to-IP mappings directly from Active Directory authentication logs or other identity sources without placing heavy traffic on the AD servers. By leveraging this feature, the NGFW can offload authentication-related tasks and efficiently identify users without overloading AD servers. This solution is scalable and minimizes the overhead typically caused by frequent User-ID queries to AD servers.

* Option B: Using GlobalProtect Windows SSO to gather user information can add complexity and is not the most efficient solution for this problem. It requires all users to install GlobalProtect agents, which may not be feasible in all environments and can introduce operational challenges.

* Option C: Data redistribution involves redistributing user-to-IP mappings from one NGFW (hub) to other NGFWs (spokes). While this can reduce the number of queries sent to AD servers, it assumes the mappings are already being collected from AD servers by the hub, which means the performance issue on the AD servers would persist.

* Option D: Using GlobalProtect agents to gather user information is a valid method for environments where GlobalProtect is already deployed, but it is not the most efficient or straightforward solution for the given problem. It also introduces dependencies on agent deployment, configuration, and management.

How to Implement Cloud Identity Engine for User-ID Mapping:

* Enable Cloud Identity Engine from the Palo Alto Networks console.

* Integrate the Cloud Identity Engine with the AD servers to allow it to retrieve authentication logs directly.

* Configure the NGFWs to use the Cloud Identity Engine for User-ID mappings instead of querying the AD servers directly.

* Monitor performance to ensure the AD servers are no longer overloaded, and mappings are being retrieved efficiently.

NEW QUESTION # 43

.....

The beauty of life may be that we don't know what will happen in the future, but even so, we are willing to pursue a bright future. Happiness for us may be the life we want to live, and our PSE-Strata-Pro-24 Study Materials can provide a good foundation for you to achieve this goal. A good job requires good skills, and the most intuitive way to measure your ability is how many qualifications you have passed and how many qualifications you have.
