In the face of fierce competition, you should understand the importance of time. You must walk in front of the competitors. If you have more strength, you will get more opportunities. Your dream life can really become a reality! PT0-002 learning materials are here, right to choose! And you will find that you will get benefited from PT0-002 Exam Braindumps far beyond you can image. Not only you can get more professional knowledge but also you can get the PT0-002 certification to find a better career.

CompTIA PT0-002 (CompTIA PenTest+ Certification Exam) is a globally recognized certification that validates an individual's knowledge and skills in conducting penetration testing and vulnerability management. PT0-002 exam is vendor-neutral and designed for network and security professionals who want to specialize in penetration testing and vulnerability assessment. It covers various areas and concepts, such as planning and scoping, information gathering, vulnerability identification, exploitation, post-exploitation, and reporting, and requires at least three to four years of hands-on experience in information security and penetration testing.

CompTIA PenTest+ certification exam, also known as PT0-002, is a reputable certification offered by CompTIA to validate your skills and knowledge in penetration testing. CompTIA PenTest+ Certification certification demonstrates that you can identify and exploit vulnerabilities to protect the organization's network and data from cyber-attacks. PT0-002 is designed for professionals who want to pursue a career in penetration testing or for those who want to enhance their skills in cybersecurity.

CompTIA PenTest+ Certification Sample Questions (Q181-Q186):

NEW QUESTION # 181
A penetration tester opened a shell on a laptop at a client's office but is unable to pivot because of restrictive ACLs on the wireless subnet. The tester is also aware that all laptop users have a hard-wired connection available at their desks. Which of the following is the BEST method available to pivot and gain additional access to the network?

- A. Capture handshakes from wireless clients to crack.
- B. Set up a captive portal with embedded malicious code.
- C. Span deauthentication packets to the wireless clients.
- D. Set up another access point and perform an evil twin attack.

Answer: C

Explanation:
The best method available to pivot and gain additional access to the network is to span deauthentication packets to the wireless clients. This will cause them to disconnect from their wireless access point and reconnect using their hard-wired connection, which may have less restrictive ACLs. The penetration tester can then capture their traffic or attempt to compromise their systems.

NEW QUESTION # 182
A red team gained access to the internal network of a client during an engagement and used the Responder tool to capture important dat
a. Which of the following was captured by the testing team?

- A. IP addresses
- B. Encrypted file transfers
- C. User hashes sent over SMB
- D. Multiple handshakes

Answer: A

NEW QUESTION # 183
A company that developers embedded software for the automobile industry has hired a penetration-testing team to evaluate the security of its products prior to delivery. The penetration-testing team has stated its intent to subcontract to a reverse-engineering team capable of analyzing binaries to develop proof-of-concept exploits. The software company has requested additional background investigations on the reverse- engineering team prior to approval of the subcontract. Which of the following concerns would BEST support the software company's request?

- A. The reverse-engineering team may use closed-source or other non-public information feeds for its analysis.
- B. The reverse-engineering team may have a history of selling exploits to third parties.
- C. The reverse-engineering team may not instill safety protocols sufficient for the automobile industry.
- D. The reverse-engineering team will be given access to source code for analysis.

Answer: B

NEW QUESTION # 184
A security analyst is conducting an unknown environment test from 192.168 3.3. The analyst wants to limit observation of the penetration tester's activities and lower the probability of detection by intrusion protection and detection systems. Which of the following Nmap commands should the analyst use to achieve This objective?

- A. Nmap -D 10.5.2.2.168.5.5
- B. Map -scanflags SYNFIN 192.168.5.5
- C. Nmap -F 192.168.5.5

- D. Map -datalength 2.192.168.5.5

Answer: B

Explanation:
To limit observation of the penetration tester's activities and lower the probability of detection by intrusion protection and detection systems, the security analyst should use the Nmap -D 10.5.2.2
192.168.3.3 command 1. The -D option is used to conceal the identity of the attacker by using decoy IP addresses. This option can be used to confuse the IDS/IPS and lower the probability of detection 1.

NEW QUESTION # 185
A company requires that all hypervisors have the latest available patches installed. Which of the following would BEST explain the reason why this policy is in place?

- A. To fix any misconfigurations of the hypervisor
- B. To reduce the probability of a VM escape attack
- C. To provide protection against host OS vulnerabilities
- D. To enable all features of the hypervisor

Answer: B

Explanation:
Explanation
A hypervisor is a type of virtualization software that allows multiple virtual machines (VMs) to run on a single physical host machine. If the hypervisor is compromised, an attacker could potentially gain access to all of the VMs running on that host, which could lead to a significant data breach or other security issues.
One common type of attack against hypervisors is known as a VM escape attack. In this type of attack, an attacker exploits a vulnerability in the hypervisor to break out of the VM and gain access to the host machine.
From there, the attacker can potentially gain access to other VMs running on the same host.
By ensuring that all hypervisors have the latest available patches installed, the company can reduce the likelihood that a VM escape attack will be successful. Patches often include security updates and vulnerability fixes that address known issues and can help prevent attacks.
