171. Frage

Upon receipt of a recall notice, a pharmacy technician should first:

- A. call any affected patients.
- B. send the product back.
- **C. check whether the pharmacy has the recalled product in stock.**
- D. put the recall notice in the inventory technician's box for processing.

Antwort: C

Begründung:

Upon receiving a recall notice, the first step a pharmacy technician should take is to verify whether the recalled product is present in the pharmacy's inventory. This is critical because:

* Product Identification- The pharmacy must determine if it has the affected lot numbers, expiration dates, or specific product variations mentioned in the recall notice.

* Patient Safety- If the product is in stock, it must be removed from inventory immediately to prevent accidental dispensing.

* Regulatory Compliance- The FDA, manufacturer, or wholesaler often provides specific instructions for handling recalled medications, and the pharmacy must comply with those guidelines.

* FDA Drug Recall Guidelines- Recalls are classified into Class I, II, and III, and the process requires inventory verification before further actions.

* PTCB PTCE Exam Content Outline- The PTCB exam emphasizes medication safety and regulatory compliance, which includes proper handling of recalls.

* The Drug Supply Chain Security Act (DSCSA)- This federal law mandates tracking and traceability of pharmaceutical products, reinforcing the importance of inventory checks during recalls.

* Pharmacy Policy & Procedures- Most pharmacies follow Standard Operating Procedures (SOPs) where verification of stock is the first step before contacting patients or returning products.

Key References: #Why Not the Other Options?

* A. Call any affected patients## This step is necessary after the recall is confirmed and documented. If the pharmacy does not have the recalled product, patient notification is unnecessary.

* B. Put the recall notice in the inventory technician's box for processing## Delaying action by simply passing the notice along without verifying stock can lead to patient harm.

* D. Send the product back## While returning recalled products is part of the process, it should only occur after verification and proper documentation.

172. Frage

Lorazepam oral concentrate should be stored in a pharmacy under the same temperature conditions as:

- A. Lunesta tablets.
- B. Lyumjev KwikPen.
- C. Lamictal chewable tablets.
- **D. Lanoxin oral solution.**

Antwort: D

Begründung:

Comprehensive and Detailed Step-by-Step Explanation:

Lorazepam oral concentrate (Ativan) should be stored at controlled room temperature (20-25°C or 68-77°F) and protected from light. It should not be refrigerated or frozen.

#Explanation of Answer Choices# B. Lanoxin oral solution#Correct. Like Lorazepam, Lanoxin (Digoxin) requires room temperature storage. #A. Lamictal chewable tablets# Incorrect. Stored at room temperature, but not a liquid formulation. #C. Lyumjev KwikPen#
