

Pure Storage Portworx-Enterprise-Professional日本語認定対策、Portworx-Enterprise-Professional絶対合格

Portworx-Enterprise-Professionalソフトテストシミュレータは、ほぼすべての電子製品に適用できるため、多くの人に人気があります。初めてパソコンにダウンロードしてインストールしてから、USBフラッシュディスクにコピーする場合。オフラインで好きなように、他のコンピューターでPortworx-Enterprise-Professionalソフトテストシミュレータを使用できます。また、MobilとIpadをサポートしています。削除しないと、いつまでも使用して練習できます。Pure Storage Portworx-Enterprise-Professionalソフトテストシミュレータは、時間指定試験を設定し、実際のテストで実際のシーンをシミュレートできるため、実際のテストのように何度も練習できます。

Pure Storage Portworx-Enterprise-Professional 認定試験の出題範囲：

トピック	出題範囲
トピック 1	• Deploy and Install: This domain targets DevOps Engineers and Infrastructure Specialists and focuses on deploying and installing Portworx storage solutions. It includes configuring and setting up storage clusters to support containerized applications reliably and securely.
トピック 2	• Security: This section focuses on Security Engineers and Compliance Officers responsible for enforcing security measures in container storage environments. Topics include managing encryption, access control, and compliance policies to protect stored data.
トピック 3	• Operations and Administration: This section of the exam measures the skills of Storage Administrators and Kubernetes Operators and covers managing cluster operations and administering container storage environments using Portworx. Candidates demonstrate the ability to efficiently manage and operate storage clusters in production environments.
トピック 4	• Business Continuity: This domain measures the skills of Disaster Recovery Planners and IT Continuity Managers in implementing backup, recovery, and failover strategies. It ensures candidates understand how to sustain business operations and data availability using Portworx features.
トピック 5	• Observability and Troubleshooting: This section assesses the expertise of Support Engineers and System Administrators in monitoring storage deployments and troubleshooting issues. Candidates learn to use observability tools and techniques to maintain system health and resolve performance problems effectively.

Portworx-Enterprise-Professional絶対合格、Portworx-Enterprise-Professional問題サンプル

多くの受験者は、当社の試験ブートキャンプ資料が有効であり、Pure Storage Portworx-Enterprise-Professional試験をクリアするのに十分であることを知っています。しかし、彼らは、インターネットでの購入は安全ではなく、金銭的にも安全ではなく、情報も安全ではないことを恐れています。実際、あなたは心配しすぎるかもしれません。オンライン販売は非常に一般的です。毎年、数千人の受験者が当社のPortworx-Enterprise-Professional試験ブートキャンプ資料を選択し、確実に試験に合格しています。お金は確かに安全です。PayPalはあなたのお金とあなたの安全を保証します。お客様の情報も安全であることを保証するために、厳格な情報秘密システムがあります。

Pure Storage Pure Certified Portworx Enterprise Professional (PEP) Exam 認定 Portworx-Enterprise-Professional 試験問題 (Q14-Q19):

質問 # 14

What is the primary purpose of Stork in a Kubernetes cluster?

- A. To monitor network traffic.
- **B. To manage storage operations and migrations.**
- C. To deploy applications automatically.

正解: B

解説:

Comprehensive and Detailed Explanation From Exact Extract:

Stork (Storage Orchestrator for Kubernetes) is a Portworx component designed to enhance Kubernetes storage management. Its primary purpose is to orchestrate storage-aware operations, including volume scheduling, migration, backup, and disaster recovery. Stork integrates deeply with Kubernetes to provide application-aware scheduling decisions that respect storage constraints such as volume locality and affinity. It also facilitates migration of stateful workloads by coordinating volume replication and failover. Stork simplifies complex storage workflows in Kubernetes environments, enabling seamless backup and restore of applications and improving overall resilience. Portworx's official documentation highlights Stork as a key enabler for business continuity by managing storage operations and migrations, making it essential for Kubernetes environments running critical stateful workloads with Portworx storage 【Pure Storage Portworx Stork Guide source】.

質問 # 15

An administrator wants to check the size, availability, and usage of all pools in the cluster. Which command should the administrator use?

- A. `pxctl cluster provision-status`
- B. `kubectrl get storagecluster`
- **C. `pxctl service pool show`**

正解: C

解説:

Comprehensive and Detailed Explanation From Exact Extract:

To view detailed information about storage pools in a Portworx cluster-including size, availability, usage, and health-administrators should use the command `pxctl service pool show`. This CLI command provides a comprehensive overview of all storage pools configured on cluster nodes, including pool IDs, device names, pool sizes, free space, and status. It helps administrators monitor resource utilization, detect degraded pools, and plan capacity expansions. While `kubectrl get storagecluster` shows the overall cluster CRD status and `pxctl cluster provision-status` shows provisioning status, neither provides detailed pool-level insights. Portworx's operational documentation recommends `pxctl service pool show` as the definitive command for monitoring pool resources and ensuring storage health across the cluster 【Pure Storage Portworx CLI Guide source】.

質問 # 16

Which Portworx component is used to co-locate volumes with pods?

- A. Stork

- B. Volume Placement Strategy
- C. Autopilot

正解: B

解説:

Comprehensive and Detailed Explanation From Exact Extract:

Portworx's Volume Placement Strategy ensures that persistent volumes are co-located with the pods that use them, enhancing performance and reducing latency. This strategy involves applying placement rules and constraints that guide Kubernetes scheduler and Portworx storage operations to place data volumes on nodes close to or the same as the pods. Co-location improves I/O throughput and application responsiveness by minimizing network hops between compute and storage resources. While Autopilot automates scaling and Stork manages storage-aware scheduling, Volume Placement Strategy specifically handles volume location relative to workloads. The Portworx architecture documentation highlights this component as critical for optimizing storage efficiency and workload performance in Kubernetes environments running Portworx storage **【Pure Storage Portworx Architecture Docs source】**.

質問 # 17

What command can be used to list all Autopilot rule objects in all namespaces in a Portworx cluster?

- A. `kubectl describe autopilotrules`
- B. `pxctl list autopilotrules`
- C. `kubectl get autopilotruleobjects --all-namespaces`

正解: B

解説:

Comprehensive and Detailed Explanation From Exact Extract:

The command `pxctl list autopilotrules` is used to list all Autopilot rule objects across namespaces within a Portworx cluster. Autopilot rules define automated policies for storage operations like scaling and volume migration. This CLI command queries the Portworx control plane to retrieve and display all configured Autopilot rules, regardless of the Kubernetes namespace they reside in. Using `kubectl` commands alone is insufficient because Autopilot rules are managed internally by Portworx and may not correspond directly to Kubernetes resources. Official Portworx CLI documentation confirms `pxctl list autopilotrules` as the primary command for comprehensive Autopilot rule enumeration, enabling administrators to audit and manage storage automation policies efficiently **【Pure Storage Portworx Autopilot Guide source】**.

質問 # 18

What does the DriveStateChange alert indicate?

- A. Free disk space going below the recommended level of 10%
- B. Free disk space going below the recommended level of 20%
- C. Free volume space going below the recommended level of 5%

正解: A

解説:

Comprehensive and Detailed Explanation From Exact Extract:

The DriveStateChange alert in Portworx indicates that free disk space on a storage device has fallen below the recommended threshold of 10%. This alert warns administrators that storage capacity on a particular disk is critically low and that immediate action may be needed to avoid performance degradation or failures. Monitoring disk space is essential to maintain cluster health and prevent data loss. Portworx automatically generates this alert as part of its proactive monitoring system, providing early warning so operators can add capacity, remove unnecessary data, or re-balance workloads. The alert documentation advises maintaining sufficient free space to ensure optimal performance and data durability in the Portworx cluster **【Pure Storage Portworx Alerting Guide source】**.
