PVIP Valid Test Dumps | PVIP Certification Dump

ActualtestPDF have made customizable NABCEP PVIP practice tests so that users can take unlimited tests and improve PV Installation Professional (PVIP) Board Certification exam preparation day by day. These PVIP practice tests are based on the real examination scenario so the students can feel the pressure and learn to deal with it. The customers can access the result of their previous given PVIP Exam history and try not to make any excessive mistakes in the future. The PV Installation Professional (PVIP) Board Certification practice tests have customizable time and PVIP exam questions feature so that the students can set the time and PVIP exam questions according to their needs.

NABCEP PV Installation Professional (PVIP) Board Certification Sample Questions (Q52-Q57):

NEW QUESTION # 52

During a PV system inspection, an installer notices that the rapid shutdown system fails to de-energize the array within 30 seconds of initiation. What is the most likely cause based on NEC 690.12 requirements?

- A. The array conductors exceed the maximum allowable voltage
- B. The rapid shutdown switch is installed more than 10 feet from the array
- C. The inverter is not listed for rapid shutdown compliance
- D. The system lacks a compatible rapid shutdown device

Answer: D

NEW QUESTION # 53

A PV array is installed on a sloped roof with a 6:12 pitch. What is the minimum fastener pullout strength required if the uplift force is 200 lbs per attachment point?

- A. 400 lbs
- B. 300 lbs
- C. 200 lbs
- D. 600 lbs

Answer: A

NEW QUESTION # 54

A residential PV system uses two 120/240Vac utility-interactive inverters with a sealed lead-acid battery energy backup for protected loads. The MOST important protected load consideration when operating in the backup mode is that:

- A. The protected loads must have automatic restart function.
- B. All protected loads are connected in multiwire branch circuits.
- C. The peak current from the sealed lead- acid batteries must not exceed peak demand currents.
- D. The stand-alone system configuration can adequately supply current to all protected load branch circuit.

Answer: B

NEW QUESTION # 55

Which of the following is the required MINIMUM width of the working space In front of ac disconnect equipment?

- A. 36 in. from the right and left edges of the inverter
- B. 36 in. from the top of the ungrounded inverter terminals
- C. 30 in. or the width of the ac disconnect, whichever is greater
- D. 30 in. from all exposed live parts and terminals

Answer: C

NEW QUESTION # 56

Inspection of a new PV installation shows that the dwelling uses a galvanized water pipe for its grounding electrode and that the PV system now shares the connection. Which of the following is an acceptable supplemental electrode method to ensure the integrity of having a grounding electrode?

- A. Connecting the service panel to an auxiliary ground used by a lightning protection system
- B. Connecting the water pipe to a gas pipe that is known to be solidly grounded
- C. Connection the service panel to a copper-clad steel ground rod near the panel
- D. Connecting the water pipe to the service entrance panel metal structure

Answer: D

NEW QUESTION # 57

.....

The software version is one of the three versions of our PVIP actual exam, which is designed by the experts from our company. The functions of the software version are very special. For example, the software version can simulate the real exam environment. If you buy our PVIP study questions, you can enjoy the similar real exam environment. In addition, the software version of our study materials is not limited to the number of the computer. So do not hesitate and buy our PVIP Preparation exam, you will benefit a lot from it and pass the PVIP exam for sure.
