

Questions and Answers for the 1z0-915-1 Exam, Authentic 2025

Question: 1 of 180 Time Remaining: 02:59:55 Pause Remaining: 00:05:00 PAUSE

A nurse is monitoring a client who is receiving a blood transfusion. The nurse identifies that the client has urticaria and is wheezing. Which of the following types of transfusion reactions should the nurse suspect?

ALLERGIC REACTION

☐ Acute hemolytic

☐ Febrile

☐ Circulatory overload

CONTINUE

Question: 2 of 180 Time Remaining: 02:59:55 Pause Remaining: 00:05:00 PAUSE

A nurse is caring for a client who is postoperative following abdominal surgery and has a wound ^{coming out} dehiscence. Which of the following actions should the nurse take?

NEVER push anything back

☐ Hold gentle, direct pressure on the protruding organ.

☐ Place the client's knees in an extended position.

☐ Raise the head of the bed to a 45° angle.

CONTINUE

Question: 3 of 180 Time Remaining: 02:59:05 Pause Remaining: 00:05:00 PAUSE

A nurse is caring for a client who has a prescription for ^{ACTION} protarginin 10 units and regular insulin 15 units subcutaneously. NRN which of the following actions should the nurse take next?

NPH 1st then regular!

☐ Place the cap over the needle.

☐ Verify the dosage with another nurse.

☐ Withdraw 10 units of NPH insulin.

Our 1z0-915-1 test prep is renowned for free renewal in the whole year. As you have experienced various kinds of exams, you must have realized that renewal is invaluable to 1z0-915-1 study materials, especially to such important 1z0-915-1 exams. And there is no doubt that being acquainted with the latest trend of exams will, to a considerable extent, act as a driving force for you to pass the exams and realize your dream of living a totally different life. So if you do want to achieve your dream, buy our 1z0-915-1 practice materials.

Oracle 1z0-915-1 Exam Syllabus Topics:

Topic	Details
Topic 1	Inbound Replication: For database administrators and replication experts, this section of the exam covers setting up and troubleshoot inbound replication and creating channels.
Topic 2	MySQL HeatWave Configurations: For database administrators and performance tuning specialists, this part of the exam covers creating custom configurations, comparing configurations, describing the effects of changing dynamic and non-dynamic variables, and updating a DB system configuration.

Topic 3	Provisioning and Connecting DB systems: For system administrators and database engineers, this part of the exam covers identifying VCN requirements for provisioning DB systems, connecting to DB systems with OCI Bastion, connecting to DB systems with MySQL Shell, connecting to DB systems with OCI Cloud Shell, connect to DB system with OCI SQL Worksheet, and authenticate DB system with OCI Identify Access Management credentials.
Topic 4	Backing up and restoring DB systems: For database administrators and disaster recovery specialists, this section of the exam covers backing up and restoring a DB system, managing automatic backups, and performing point-in-time recovery.
Topic 5	High Availability: For system reliability engineers and database architects, this domain of the exam covers how to enable and disable the high availability of a DB system, explain placement considerations for a high availability DB system, distinguish between switchover and failover, etc.
Topic 6	Managing DB systems: For network administrators and cloud infrastructure specialists, this domain of the exam covers demonstrating a command of DRG and DRG Attachments, applying BGP in the OCI environment, evaluating OCI VPN Services, and validating the various FastConnect products from OCI.
Topic 7	Data Migrations: For data migration specialists and database administrators, this part of the exam covers creating a DB system with data import, importing data into a DB system, and exporting data from MySQL servers and DB systems.
Topic 8	MySQL HeatWave Service: For database administrators, cloud architects, and DevOps engineers, this section of the exam covers identifying key features and benefits, describing MySQL HeatWave architecture, defining MySQL HeatWave terminology, and identifying MySQL HeatWave limitations.
Topic 9	HeatWave Cluster: For database performance specialists and cloud architects, this section of the exam covers

1z0-915-1 Demo Test - 100% Real Questions Pool

The experts and professors of our company have designed the three different versions of the 1z0-915-1 study materials, including the PDF version, the online version and the software version. Now we are going to introduce the online version for you. There are a lot of advantages about the online version of the 1z0-915-1 Study Materials from our company. For instance, the online version can support any electronic equipment and it is not limited to all electronic equipment.

Oracle MySQL HeatWave Implementation Associate Rel 1 Sample Questions (Q46-Q51):

NEW QUESTION # 46

You can perform a node estimate when adding a HeatWave cluster to a DB system in OCI Console. Which two tasks are performed by the node estimate process? (Choose two.)

- A. Generate a load command to activate Auto Parallel Load.
- B. Estimate the number of OCPUs required to process selected user tables.
- C. Estimate the disk storage required for each user table.
- D. Generate a set of alter statements to load selected tables into the HeatWave cluster.
- E. Estimate the memory required for each user table.

Answer: B,E

Explanation:

When performing a node estimate while adding a HeatWave cluster to a DB system in OCI Console, the process undertakes the following tasks:

* Estimate the number of OCPUs required to process selected user tables(Answer B): The node estimation process calculates the

necessary OCPUs based on the size and complexity of the tables selected by the user. This ensures that the cluster has adequate processing power for efficient performance.

* Estimate the memory required for each user table(Answer C): This task involves determining the memory requirements for each table that will be loaded into the HeatWave cluster. This ensures that there is sufficient memory to handle the data and execute queries efficiently.

References:

* OCI Console Documentation on HeatWave

* MySQL HeatWave User Guide

NEW QUESTION # 47

You want to enable high availability of a stand-alone DB system. Which two conditions are required? (Choose two.)

- A. The DB system must be active.
- B. The DB system automatic backup must be enabled.
- C. The DB system crash recovery must be enabled.
- D. The DB system delete protection must be enabled.
- E. The DB system point-in-time recovery must be enabled.

Answer: A,B

Explanation:

To enable high availability for a stand-alone DB system, the following conditions are required:

* The DB system must be active(Answer D): The DB system needs to be in an active state to enable high availability features.

* The DB system automatic backup must be enabled(Answer E): Automatic backups must be enabled to ensure data protection and facilitate failover operations.

Steps:

* Ensure the DB system is running and operational.

* Enable automatic backups through the OCI Console or API.

References:

* MySQL High Availability Documentation

* Automatic Backups Documentation

NEW QUESTION # 48

You want to create a custom configuration for the MySQL DB system in OCI Console. Which three can you set? (Choose three.)

- A. Compartment
- B. Shape
- C. Description
- D. VCN
- E. Subnet

Answer: A,B,D

Explanation:

When creating a custom configuration for the MySQL DB system in OCI Console, you can set the following:

A.Shape: This defines the compute resources (CPU, memory) allocated to the DB system. B.VCN (Virtual Cloud Network): This defines the network in which your DB system will be placed. E.Compartment: This is an OCI resource management feature that allows you to organize and isolate your cloud resources.

NEW QUESTION # 49

You want to restore a stand-alone DB system to a high-availability DB system with a point-in-time recovery. Which three are required? (Choose three.)

- A. Point-in-time recovery must be enabled before the point in time to which you want to restore.
- B. The stand-alone DB system must remain active during the restore.
- C. A manual backup taken before the selected point in time must be available.
- D. Every user table must have a primary key.

- E. An automatic backup taken before the selected point in time must be available.

Answer: A,C,E

Explanation:

To restore a stand-alone DB system to a high-availability DB system with point-in-time recovery, the following are required:

B:Point-in-time recovery must be enabled before the point in time to which you want to restore: Point-in-time recovery (PITR) must be enabled beforehand to allow restoration to a specific point in time. C.An automatic backup taken before the selected point in time must be available: You need an automatic backup from before the desired restore point. D.A manual backup taken before the

selected point in time must be available:

Manual backups are also essential to ensure you can restore to the desired point in time.

NEW QUESTION # 50

Which feature do you use to copy transactions from an on-premises MySQL instance to a DB system?

- A. HeatWave cluster
- B. Inbound replication
- C. Read replica
- D. Outbound replication

Answer: B

Explanation:

To copy transactions from an on-premises MySQL instance to a DB system, you use inbound replication (Answer B).

* Inbound Replication: This feature allows the MySQL DB system to receive and apply changes (transactions) from an external MySQL instance.

* Replication Configuration: You need to set up replication between the on-premises MySQL instance and the MySQL DB system by configuring the master (on-premises) and the slave (DB system) appropriately.
