

Questions and Answers for the PSE-SFWW-Pro-24 Exam, Authentic 2025

HESI RN 2025 EXIT EXAM LATEST VERSION / ACTUAL AUTHENTIC EXAM QUESTIONS AND ANSWES (A+ GUIDE SOLUTION)

Terms in this set (130)

When preparing to administer a prescribed medication to a homeless client at a community psychiatric clinic. The client tells the nurse that the usual dosage taken is different from the dose the nurse is giving. Which action should the nurse take?

- A) Inform the client that the client may refuse the medication and document whether or not the client takes it.
- B) Withhold the medication until the dosage can be confirmed.
- C) Explain to the client that the dosage has been changed.
- D) Tell the client to take the medication then verify the dosage at the next healthcare team meeting.

B) Withhold the medication until the dosage can be confirmed.

If you try to free download the demos on the website, and you will be amazed by our excellent PSE-SFWW-Pro-24 preparation engine. We can absolutely guarantee that even if the first time to take the exam, candidates can pass smoothly. You can find the latest version of PSE-SFWW-Pro-24 Practice Guide in our website and you can practice PSE-SFWW-Pro-24 study materials in advance correctly and assuredly. The following passages are their advantages for your information

You only need 20-30 hours to learn Palo Alto Networks Systems Engineer Professional - Software Firewall exam torrent and prepare the exam. Many people, especially the in-service staff, are busy in their jobs, learning, family lives and other important things and have little time and energy to learn and prepare the exam. But if you buy our PSE-SFWW-Pro-24 Test Torrent, you can invest your main energy on your most important thing and spare 1-2 hours each day to learn and prepare the exam. Our questions and answers are based on the real exam and conform to the popular trend in the industry.

New PSE-SFWW-Pro-24 Test Cram & Test PSE-SFWW-Pro-24 Topics Pdf

The second format is a web-based practice exam which offers a flexible and accessible option for students trying to assess and

improve their preparation for the Palo Alto Networks Certification Exams. The PSE-SFW-24 web-based practice test can be accessed online through browsers like Firefox, Microsoft Edge, Google Chrome, and Safari. Customers need a stable internet connection in order to access web-based formats easily without facing issues.

Palo Alto Networks Systems Engineer Professional - Software Firewall Sample Questions (Q36-Q41):

NEW QUESTION # 36

Which two products can be deployed using Terraform for automation and integration? (Choose two.)

- A. CN-Series firewall
- B. VM-Series firewall
- C. PA-Series firewall
- D. Cloud NGFW

Answer: A,B

Explanation:

Comprehensive and Detailed In-Depth Step-by-Step Explanation: Terraform is an Infrastructure-as-Code (IaC) tool that automates the provisioning and configuration of infrastructure, including Palo Alto Networks firewalls. The Palo Alto Networks Systems Engineer Professional - Software Firewall documentation specifies which firewall products support Terraform integration for deployment and automation in cloud and virtualized environments.

* VM-Series firewall (Option B): Terraform can be used to deploy VM-Series firewalls in public clouds (e.g., AWS, Azure, GCP), private clouds, or on-premises virtualized environments. Palo Alto Networks provides Terraform modules and scripts (available on GitHub) to automate VM-Series deployment, configuration, and integration with cloud-native services, ensuring scalability and repeatability. The documentation highlights Terraform as a key automation tool for VM-Series, aligning with DevOps practices.

* CN-Series firewall (Option C): CN-Series firewalls, designed for containerized environments, can be deployed using Terraform in conjunction with Kubernetes. Terraform scripts automate the provisioning of infrastructure (e.g., Kubernetes clusters in AWS, Azure, or GCP) and integrate with CN-Series for securing container workloads. The documentation notes Terraform's role in automating CN-Series deployments, leveraging Kubernetes manifests and cloud-native integrations.

Options A (PA-Series firewall) and D (Cloud NGFW) are incorrect. PA-Series firewalls are physical appliances, not virtual or software-based, and do not support Terraform deployment, as Terraform focuses on cloud and virtualized infrastructure, not hardware. Cloud NGFW is a cloud-native managed service in AWS and Azure, and while it can be managed or deployed through automation, it does not use Terraform directly for deployment, as it relies on cloud provider APIs and native scaling mechanisms, not IaC tools like Terraform.

References: Palo Alto Networks Systems Engineer Professional - Software Firewall, Section: Automation and Integration, Terraform Documentation for VM-Series and CN-Series, GitHub Repository for Palo Alto Networks.

NEW QUESTION # 37

Which three resources are deployment options for Cloud NGFW for Azure or AWS? (Choose three.)

- A. AWS Firewall Manager
- B. Panorama AWS and Azure plugins
- C. Palo Alto Networks Ansible playbooks
- D. Azure CLI or Azure Terraform Provider
- E. Azure Portal

Answer: C,D,E

Explanation:

Cloud NGFW for Azure and AWS can be deployed using various methods.

Why A, B, and E are correct:

A . Azure CLI or Azure Terraform Provider: Cloud NGFW for Azure can be deployed and managed using Azure's command-line interface (CLI) or through Infrastructure-as-Code tools like Terraform. Cloud NGFW for AWS can be deployed and managed using AWS CloudFormation or Terraform.

B . Azure Portal: Cloud NGFW for Azure can be deployed directly through the Azure portal's graphical interface.

E . Palo Alto Networks Ansible playbooks: Palo Alto Networks provides Ansible playbooks for automating the deployment and configuration of Cloud NGFW in both Azure and AWS.

Why C and D are incorrect:

C . AWS Firewall Manager: AWS Firewall Manager is an AWS service for managing AWS WAF, AWS Shield, and VPC security

groups. It is not used to deploy Cloud NGFW.

D. Panorama AWS and Azure plugins: While Panorama is used to manage Cloud NGFW, the deployment itself is handled through native cloud tools (Azure portal, CLI, Terraform) or Ansible.

Palo Alto Networks Reference:

Cloud NGFW for Azure and AWS Documentation: This documentation provides deployment instructions using various methods, including the Azure portal, Azure CLI, Terraform, and Ansible.

Palo Alto Networks GitHub Repositories: Palo Alto Networks provides Ansible playbooks and Terraform modules for Cloud NGFW deployments.

NEW QUESTION # 38

Which three statements describe benefits of Palo Alto Networks Cloud-Delivered Security Services (CDSS) over other vendor solutions? (Choose three.)

- A. It significantly reduces the total cost of ownership for the customer.
- B. Multi-vendor best-of-breed products provide security coverage on a per-use-case basis.
- C. It provides simplified management through fewer consoles for more effective security coverage.
- D. It requires no additional performance overhead when enabling additional features.
- E. Individually targeted products provide better security than platform solutions.

Answer: A,C,D

Explanation:

Palo Alto Networks Cloud-Delivered Security Services (CDSS) offer several advantages over other security solutions:

* A. Individually targeted products provide better security than platform solutions: This is generally the opposite of Palo Alto Networks' philosophy. CDSS is a platform approach, integrating multiple security functions into a unified service. This integrated approach is often more effective than managing disparate point solutions.

* B. Multi-vendor best-of-breed products provide security coverage on a per-use-case basis: While "best-of-breed" has its merits, managing multiple vendors increases complexity and can lead to integration challenges. CDSS provides a comprehensive set of security services from a single vendor, simplifying management and integration.

* C. It requires no additional performance overhead when enabling additional features: This is a key advantage of CDSS. Because the services are cloud-delivered and integrated into the platform, enabling additional security functions typically does not introduce significant performance overhead on the firewall itself.

* D. It provides simplified management through fewer consoles for more effective security coverage: CDSS is managed through Panorama or Strata Cloud Manager, providing a single pane of glass for managing multiple security functions. This simplifies management compared to managing separate consoles for different security products.

* E. It significantly reduces the total cost of ownership for the customer: By consolidating security functions into a single platform and reducing management overhead, CDSS can help reduce the total cost of ownership compared to deploying and managing separate point solutions.

References:

Information about CDSS and its benefits can be found on the Palo Alto Networks website and in their marketing materials:

* CDSS overview: Search for "Cloud-Delivered Security Services" on the Palo Alto Networks website.

This will provide information on the benefits and features of CDSS.

These resources highlight the advantages of CDSS in terms of performance, simplified management, and reduced TCO.

NEW QUESTION # 39

A company has used software NGFW credits to deploy several VM-Series firewalls with Advanced URL Filtering in the company's deployment profiles. The IT department has determined that the firewalls no longer need the Advanced URL Filtering license.

How can this license be removed from the hosts?

- A. Add a new deployment profile with all the licenses selected except Advanced URL Filtering.
- B. On the firewall, issue this command: > delete url subscription license.
- C. Edit the current deployment profile to remove the Advanced URL Filtering license.
- D. Delete the current deployment profile from the cloud service provider.

Answer: C

Explanation:

Software NGFW credits and deployment profiles manage licenses for VM-Series firewalls.

A. Edit the current deployment profile to remove the Advanced URL Filtering license: This is the correct approach. Deployment

profiles are used to define the licenses associated with VM-Series firewalls. Modifying the profile directly updates the licensing for all firewalls using that profile.

B . On the firewall, issue this command: > delete url subscription license: This command does not exist. Licenses are managed through the deployment profile, not directly on the firewall via CLI in this context.

C . Add a new deployment profile with all the licenses selected except Advanced URL Filtering: While this would work, it's less efficient than simply editing the existing profile.

D . Delete the current deployment profile from the cloud service provider: This is too drastic. Deleting the profile would remove all licensing and configuration associated with it, not just the Advanced URL Filtering license.

NEW QUESTION # 40

Which method fully automates the initial deployment, configuration, licensing, and threat content download when setting up a new VM-Series firewall?

- A. Register the VM-Series firewall and launch the Day 1 Configuration Wizard.
- B. Use Panorama to push device groups and template stack configurations to the new VM-Series firewall.
- **C. Deploy a complete bootstrap package by using an ISO image, block storage, or a storage bucket.**
- D. Connect the VM-Series firewall to Panorama and push the configuration package by using the bootstrap plugin.

Answer: C

Explanation:

Comprehensive and Detailed In-Depth Step-by-Step Explanation: Automating the deployment of VM-Series firewalls is essential for scalability and efficiency in cloud and virtualized environments. The Palo Alto Networks Systems Engineer Professional - Software Firewall documentation provides detailed guidance on automation methods, with bootstrapping being the most comprehensive approach.

* Deploy a complete bootstrap package by using an ISO image, block storage, or a storage bucket (Option C): Bootstrapping is the most automated method for deploying a VM-Series firewall. A bootstrap package includes all necessary files-init-cfg.txt (for initial configuration), license files, authentication codes, and content updates (e.g., application and threat signatures)-stored in a location accessible to the VM (e.g., an ISO image, AWS S3 bucket, Azure Blob storage, or GCP storage bucket). When the VM-Series firewall boots, it automatically retrieves and applies these files, completing initial deployment, configuration, licensing, and threat content downloads without manual intervention. The documentation emphasizes bootstrapping as the preferred method for fully automated, zero-touch deployments in public clouds, private clouds, or on-premises environments.

Options A (Register the VM-Series firewall and launch the Day 1 Configuration Wizard), B (Use Panorama to push device groups and template stack configurations to the new VM-Series firewall), and D (Connect the VM-Series firewall to Panorama and push the configuration package by using the bootstrap plugin) are incorrect. The Day 1 Configuration Wizard (Option A) requires manual interaction and does not fully automate all steps, such as licensing and content downloads. Using Panorama to push configurations (Options B, D) requires the firewall to be initially deployed and connected to Panorama, which is not fully automated for initial setup; it assumes manual steps or partial automation, not covering licensing and content downloads comprehensively like bootstrapping. There is no specific "bootstrap plugin" mentioned in the documentation for Panorama in this context, making Option D inaccurate. References: Palo Alto Networks Systems Engineer Professional - Software Firewall, Section: VM-Series Deployment Automation, Bootstrapping Guide, VM-Series Licensing and Configuration Documentation.

NEW QUESTION # 41

.....

For the candidates of the exam, you pay much attention to the pass rate. If you can't pass the exam, all efforts you have done will be invalid. The pass rate of us is more than 98.95%, if you choose us, we will assure you that you can pass the exam, and all your efforts will be rewarded. Our service staff will reply all your confusions about the PSE-SFW-Pro-24 Exam Braindumps, and they will give you the professional suggestions and advice.
