

Questions EMT Pdf & New EMT Dumps Sheet

EMT Test 1 (Chapters 1 - 5) Questions and Answers.

National guidelines for EMS care are intended to _____.

Select one:

- A. facilitate a national EMS labor group
- B. reduce expenses at the local and state levels
- C. provide more consistent delivery of EMS care across the United States
- D. unify EMS providers under a single medical director - ANSWER C. provide more consistent delivery of EMS care across the United States

The determination that prompt surgical care in the hospital is more important than performing time-consuming procedures in the field on a major trauma patient is based MOSTLY on:

Select one:

- A. the lead EMT's decision.
- B. regional trauma guidelines.
- C. EMS research.
- D. local protocols. - ANSWER C. EMS research

As an EMT, you may be authorized to administer aspirin to a patient with chest pain based on:

Select one:

- A. medical director approval.
- B. an order from a paramedic.
- C. the patient's condition.
- D. the transport time to the hospital. - ANSWER A. medical director approval

Which of the following descriptions MOST accurately portrays emergency medical services (EMS)?

Select one:

- A. A system composed exclusively of emergency medical responders (EMRs) and emergency medical technicians (EMTs) who are responsible for providing care to sick and injured patients
- B. A vast network of advanced life support (ALS) providers who provide definitive emergency care in the prehospital setting
- C. A team of health care professionals who are responsible for providing emergency care and transportation to the sick and injured
- D. A team of paramedics and emergency physicians who are responsible for providing emergency care to critically injured patients - ANSWER C. A team of healthcare professionals who are responsible for providing emergency care and transportation to the sick and injured.

What should an EMT do to limit errors in the field?

P.S. Free 2025 NREMT EMT dumps are available on Google Drive shared by ActualtestPDF: https://drive.google.com/open?id=17uLjo2IKJrdBsZQP0Gqx4SWhSoQCnj_C

If you choose to sign up to participate in NREMT certification EMT exams, you should choose a good learning material or training course to prepare for the examination right now. Because NREMT Certification EMT Exam is difficult to pass. If you want to pass the exam, you must have a good preparation for the exam.

Following is the Test Prep EMT Exam Format

Format: Multiple choices, multiple answers

- Language: English
- Length of Examination: 120 minutes
- Passing score: 70%
- Number of Questions: 70-120

Test Prep EMT Exam Introduction

The National Register Emergency Medical Technician (EMT) cognitive test is a computer adaptive test (CAT). This means that each candidate is evaluated based on the position of the responses on a spectrum. Once a candidate gets the correct answers, the computer will automatically enter more difficult questions to continue testing the candidate's skill level. The number of items a candidate can expect from the EMT Exam will be between 70 and 120. Each exam will have between 60 and 110 "live" elements that will be counted towards the final score. The exam will also include 10 pilot questions that do not affect the final score. The maximum time allowed to complete the exam is 2 hours. To pass the exam, candidates must meet a standard skill level. The standard of success is defined by the ability to provide safe and effective entry-level emergency medical care.

Trustable NREMT Questions EMT Pdf | Try Free Demo before Purchase

As we all know, good EMT study materials can stand the test of time, our company has existed in the EMT exam dumps for years, we have the most extraordinary specialists who are committed to the study of the EMT study materials for years, they conclude the questions and answers for the candidates to practice. By practicing the EMT Exam Dumps, the candidates can pass the exam successfully. Choose us, and you can make it.

NREMT Emergency Medical Technicians Exam Sample Questions (Q57-Q62):

NEW QUESTION # 57

An EMT is using a BVM to ventilate a 28-year-old patient with asthma. The patient is unresponsive, and their vital signs are BP 70/40, P 142, R 8, and SpO₂ 89% on room air. The patient is becoming increasingly difficult to ventilate. What should the EMT do next?

- A. Apply high-flow oxygen via non-rebreather mask
- **B. Decrease the rate of ventilations**
- C. Place the patient on CPAP
- D. Ventilate the patient more forcefully

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In patients with asthma experiencing respiratory failure, improper ventilation (especially excessive rates) can lead to air trapping and increased intrathoracic pressure, reducing venous return and worsening hypotension.

The correct technique is to ventilate slowly to allow full exhalation - around 1 breath every 5-6 seconds for adults.

CPAP is contraindicated in unresponsive patients who cannot maintain their own airway. A non-rebreather mask would be insufficient for an unresponsive patient, and forceful ventilation risks barotrauma.

NEW QUESTION # 58

Heat exhaustion is most frequently associated with

- A. Altered mental status
- B. Hypertension
- **C. Hypovolemia**
- D. Bradycardia

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Heat exhaustion results from prolonged exposure to elevated temperatures, leading to fluid and electrolyte loss (especially sodium and water), causing hypovolemia. This can result in:

* Tachycardia

* Weakness

* Dizziness

* Profuse sweating

Unlike heat stroke, mental status is typically preserved in heat exhaustion. Hypertension and bradycardia are not characteristic.

NEW QUESTION # 59

A 27-year-old patient reports trouble breathing after being struck by a car. Which of the following findings are indicative of a possible chest wall injury? Select the three answer options that are correct.

- A. Unequal rise and fall
- B. Epigastric distension
- C. Occipital depression
- D. Jugular vein distention
- E. Clavicle deformity
- F. Subcutaneous emphysema

Answer: A,E,F

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Clavicle deformity suggests potential rib or thoracic trauma. Unequal chest rise may indicate a flail segment, pneumothorax, or hemothorax. Subcutaneous emphysema, the presence of air under the skin, is a classic finding in pneumothorax or tracheobronchial injury.

Occipital depression is not chest related; epigastric distension is a GI symptom; and jugular vein distention would suggest tension pneumothorax or cardiac tamponade, which are more advanced complications.

NEW QUESTION # 60

Through which of the following routes is hepatitis A transmitted?

- A. Saliva
- B. Urine
- C. Blood
- D. Fecal

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Hepatitis A virus is transmitted exclusively via the fecal-oral route. Ingesting contaminated food or water allows the virus to enter the digestive tract, infecting liver cells. It's often spread through poor hand hygiene or unsanitary food handling.

It is not bloodborne, unlike Hepatitis B and C. It is not commonly spread through saliva or urine.

NEW QUESTION # 61

What are possible complications of using continuous positive airway pressure (CPAP)? Select the two correct options.

- A. Bronchospasms
- B. Myocardial infarction
- C. Feeling of suffocation
- D. Hypotension
- E. Pulmonary edema

Answer: C,D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

CPAP works by delivering continuous positive pressure to keep alveoli open and improve oxygenation.

However, complications include:

* Hypotension: Due to reduced venous return and cardiac preload

* Feeling of suffocation: Common psychological reaction to a tight-fitting mask and forced airflow. It is used to treat, not cause, pulmonary edema. It does not induce bronchospasm or myocardial infarction.
